Reality's Mirror Exploring The Mathematics Of Symmetry:

Reality's Mirror Bryan Bunch, 1989-10-10 Reality's Mirror Exploring the Mathematics of Symmetry Here is a book that explains in laymen language what symmetry is all about from the lowliest snowflake and flounder to the lofty group structures whose astonishing applications to the Old One are winning Nobel prizes Bunch's book is a marvel of clear witty science writing as delightful to read as it is informative and up to date The author is to be congratulated on a job well done Martin Gardner Bryan Bunch's ambidextrous mind leaps with ease from biology to physics as he explores the question of symmetry and handedness in the universe An excellent treatment of the pervasiveness of symmetry in nature and an admirable weaving of common threads from many diverse fields Dr Eugene F Mallove Chief Science Writer Massachusetts Institute of Technology Reality's Mirror is fascinating It really is something of a grand tour of symmetry in the universe why it must be here and what happens when it isn't R L Graham Director Mathematical Sciences Research Center AT T Bell Laboratories

The Gravitational Electron William M. MacArthur, 2019-02-12 Consequences for the current model of the electron of a proposed variation of the gravity constant with time If the strength of gravity decreases or decreased with time then it is shown that the electron could be a quantum black hole and this introduces a possible new derived constant of nature These results are developed to reveal that for the electron rest mass energy spin energy and electrical energy are all equivalent under these premises and precisely opposed to gravitational self energy Also that the rest mass energy of the electron is essentially the kinetic energy of its spin Lastly electric charge is expressed in gravitational terms as a general principle

Morphisms for Quantitative Spatial Analysis Daniel A. Griffith, Jean H. P. Paelinck, 2018-03-07 This book treats the notion of morphisms in spatial analysis paralleling these concepts in spatial statistics Part I and spatial econometrics Part II The principal concept is morphism e g isomorphisms homomorphisms and allomorphisms which is defined as a structure preserving the functional linkage between mathematical properties or operations in spatial statistics and spatial econometrics among other disciplines The purpose of this book is to present selected conceptions in both domains that are structurally the same even though their labelling and the notation for their elements may differ As the approaches presented here are applied to empirical materials in geography and economics the book will also be of interest to scholars of regional

science quantitative geography and the geospatial sciences It is a follow up to the book Non standard Spatial Statistics and Spatial Econometrics by the same authors which was published by Springer in 2011 **Geometry** Harold R.

David Yang Gao,2013-03-09 Motivated by practical problems in engineering and physics drawing on a wide range of applied mathematical disciplines this book is the first to provide within a unified framework a self contained comprehensive mathematical theory of duality for general non convex non smooth systems with emphasis on methods and applications in engineering mechanics Topics covered include the classical minimax mono duality of convex static equilibria the beautiful bi duality in dynamical systems the interesting tri duality in non convex problems and the complicated multi duality in general canonical systems A potentially powerful sequential canonical dual transformation method for solving fully nonlinear problems is developed heuristically and illustrated by use of many interesting examples as well as extensive applications in a

wide variety of nonlinear systems including differential equations variational problems and inequalities constrained global optimization multi well phase transitions non smooth post bifurcation large deformation mechanics structural limit analysis differential geometry and non convex dynamical systems With exceptionally coherent and lucid exposition the work fills a big gap between the mathematical and engineering sciences It shows how to use formal language and duality methods to model natural phenomena to construct intrinsic frameworks in different fields and to provide ideas concepts and powerful methods for solving non convex non smooth problems arising naturally in engineering and science Much of the book contains material that is new both in its manner of presentation and in its research development A self contained appendix provides some necessary background from elementary functional analysis Audience The book will be a valuable resource for students and researchers in applied mathematics physics mechanics and engineering The whole volume or selected chapters can also be recommended as a text for both senior undergraduate and graduate courses in applied mathematics mechanics general engineering science and other areas in which the notions of optimization and variational methods are employed

Touring the Universe through Binoculars Philip S. Harrington, 1990-10-01 This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars More comprehensive than any book currently available it starts with Earth's nearest neighbor the moon and then goes on to explore each planet in the solar system asteroids meteors comets and the sun Following this the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar The final chapter includes a detailed atlas of deep sky objects visible through binoculars The appendices include guidance on how to buy care for and maintain astronomical binoculars tips and hints on using them and detailed information on several home made binocular mounts

God Does Not Play Dice David Shiang,2013-02 In this revolutionary and provocative work David A Shiang claims to offer final answers to many of humankind s most enduring mysteries He argues that Einstein was right in rejecting the randomness of quantum theory and he shows that Stephen Hawking A Brief History of Time and Brian Greene The Fabric of the Cosmos are mistaken in saying that evidence shows nature to be probabilistic He takes on Richard Dawkins The God Delusion and Daniel Dennett Breaking the Spell contending that Darwin s theory of evolution by natural selection is neither scientific nor correct He also maintains that worry and regret can be overcome following in the footsteps of T S Eliot and other pioneers of the mind Odds are high that the logical and elegant solutions Shiang presents to our deepest riddles will cause you to rethink your most fundamental beliefs Very provocative erudite and solidly based on intelligent and logical thinking Congratulations on making an excellent contribution to understanding the role of a higher intelligence in organizing the affairs of the universe Pat McGovern IDG Founder and Chairman Co founder of The McGovern Institute for Brain Research at MIT His lucidity and logic are breathtakingly devastating He is not afraid to defend the mind of God either I cannot overstate the importance of Shiang s work and its deep influence Len Klikunas Cultural Anthropologist

Crop Yield Donald L. Smith,Chantal Hamel,2012-12-06 This book has been prepared for those seeking a better understanding of the functioning of crop plants particularly the processes that lead to the generation of products valued by human beings The contributors who are among the world s foremost experts on the important crops upon which humanity depends for food or fibre address the relevant processes for their specific crop Currently the world population is continuing to increase It is

projected to plateau around the middle of the next century and while there is considerable controversy regarding the population level when this plateau is achieved most estimates are in the area of 10 000 000 000 At present there are about 800000000 people in the world who do not have secure access to food Over the last 50 years various aspects of agricultural research have been combined to increase the output of world crops approximately 2.5 fold Given the need to feed the increasing population and to provide better access it is predicted that during the next 50 years the agricultural research community must repeat this achievement

Inventing Reality Bruce Gregory,1990-05-31 Physicists invented a language in order to talk about the world This book does not set out to explain the discipline but rather to explore the relationship between the language of physics and the world it describes The physics whose history the author traces here is concerned with understanding the ultimate constituents of matter and the nature of the forces through which these constituents interact The very precise language mathematics of physicists gives us an opportunity to see more clearly than is otherwise possible just how much of what we find in the world is a result of the way we talk about it Anyone interested in the history of physics and its language would enjoy reading this book
