Records and Briefs.* New York (State)., [A Brief History of Artificial Intelligence](#) Michael Wooldridge, 2025-09-23 From Oxford's leading AI researcher comes a fun and accessible tour through the history and future of one of the most cutting edge and misunderstood field in science Artificial Intelligence The somewhat ill defined long term aim of AI is to build machines that are conscious self aware and sentient machines capable of the kind of intelligent autonomous action that currently only people are capable of As an AI researcher with 25 years of experience professor Mike Wooldridge has learned to be obsessively cautious about such claims while still promoting an intense optimism about the future of the field There have been genuine scientific breakthroughs that have made AI systems possible in the past decade that the founders of the field would have hailed as miraculous Driverless cars and automated translation tools are just two examples of AI technologies that have become a practical everyday reality in the past few years and which will have a huge impact on our world While the dream of conscious machines remains Professor Wooldridge believes a distant prospect the floodgates for AI have opened Wooldridge's *A Brief History of Artificial Intelligence* is an exciting romp through the history of this groundbreaking field a one stop shop for AI's past present and world changing future **InfoWorld**, 1996-05-13 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects [Patterns, Thinking, and Cognition](#) Howard Margolis, 1987 What happens when we think How do people make judgments While different theories abound and are heatedly debated most are based on an algorithmic model of how the brain works Howard Margolis builds a fascinating case for a theory that thinking is based on recognizing patterns and that this process is intrinsically a logical Margolis gives a Darwinian account of how pattern recognition evolved to reach human cognitive abilities Illusions of judgment standard anomalies where people consistently misjudge or misperceive what is logically implied or really present are often used in cognitive science to explore the workings of the cognitive process The explanations given for these anomalous results have generally explained only the anomaly under study and nothing more Margolis provides a provocative and systematic analysis of these illusions which explains why such anomalies exist and recur Offering empirical applications of his theory Margolis turns to historical cases to show how an individual's cognitive repertoire the available cognitive patterns and their relation to cues changes or resists changes over time Here he focuses on the change in worldview occasioned by the Copernican discovery not only how an individual might come to see things in a radically new way but how it is possible for that new view to spread and become the dominant one A reanalysis of the trial of Galileo focuses on social cognition and its interactions
