- Controllers in planes, cars, plants, etc. are expected to finish their tasks within **reliable time bounds**
- It is essential that an upper bound on the execution times of all **tasks** is known: commonly called the **worst-case execution time (WCET)**, computed at the code level
- WCET of tasks prerequisite for scheduling analysis at **system level** (e.g. SymTA/S from Symtavision)

Realtime Systems:

Model-Based Engineering of Embedded Real-Time Systems Holger Giese, Gabor Karsai, Edward A. Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-06 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a solution domain model based engineering. It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration. Today real time embedded software plays a crucial role in most advanced technical systems such as airplanes, mobile phones and cars and has become the main driver and catalyst for innovation. Development, evolution, verification, configuration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice. Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system. Model based software engineering reinforces this notion by promoting models not only as the tool of abstraction but also as the tool for verification, implementation, testing and maintenance. The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain.

Real-time Systems Scheduling 1 Maryline Chetto, 2014-09-10 Real time systems are used in a wide range of applications including control, sensing, multimedia etc. Scheduling is a central problem for these computing communication systems since responsible of software execution in a timely manner. This book provides state of knowledge in this domain with special emphasis on the key results obtained within the last decade. This book addresses foundations as well as the latest advances and findings in Real Time Scheduling giving all references to important papers. But nevertheless the chapters will be short and not overloaded with confusing details. Coverage includes scheduling approaches for mono core as well as multi core platforms, dependent tasks, networks and notably very tremendous recent advances in scheduling of energy constrained embedded systems. Other sophisticated issues such as feedback control scheduling and timing analysis of critical applications are also addressed. This volume can serve as a textbook for courses on the topic in bachelor and in more advanced master programs. It also provides a reference for computer scientists and engineers involved in the design or the development of Cyber Physical Systems which require up to date real time scheduling solutions.

Real-Time Systems Albert M. K. Cheng, 2003-03-13 Test und Validierung spielen bei Echtzeitsystemen eine zentrale Rolle. Auf die Spezifikationen die der Hersteller angibt, muss sich der Kunde hier in besonders hohem Maße verlassen können. Bisher sind zu diesem Thema nur Artikelsammlungen erschienen. Jetzt liegt endlich ein Buch vor, das sich für Fachleute und Studenten gleichermaßen eignet und dem Leser einen umfassenden Überblick über die verschiedenen existierenden Ansätze verschafft. Vor- und Nachteile jedes Verfahrens werden ausführlich beschrieben, das erleichtert die Methodenwahl in der Praxis. Der Autor ist nicht nur ein anerkannter Experte auf seinem Gebiet, sondern genießt auch einen hervorragenden pädagogischen Ruf.

Structured Development for Real-Time Systems Paul T. Ward,1986-06-04 Real time and embedded systems are in widespread use in the modern world From the microprocessor controller in a camera through smart traffic lights and production control systems to large defense systems computer technology is increasingly a part of systems that control and respond to their environments in real time As the technology has improved we have come to rely on these systems more and more we have even put our lives in their hands Airplanes biomedical accelerators nuclear power plants and the like all depend on real time control to operate safely A failure in a control system such as not responding correctly to faults in the environment could endanger many lives Unfortunately there is a tendency for developers to focus too heavily on the intricacies of the engineering and computer technology to the detriment of understanding the real world problem at hand At best this wastes time and resources and at worst it is dangerous in light of the life critical nature of today's systems This misplaced focus can result at least partly from the lack of a comprehensive set of modeling tools and techniques fitted to the real time development environment This book provides the tools and techniques needed for visualizing and verifying the operation of a real time system prior to construction and demonstrates their usefulness

Real Time Programming 1986 J. Szlanko,2014-05-23 The 1986 IFAC IFIP Workshop on real time programming represents the 14th meeting of this workshop since it was first organized in 1971 Traditionally a meeting of a small number of experts the papers presented at this meeting concentrate on the topics of real time environment and executives software development tools and languages and special real time applications The continuing progress being made in this field of programming is amply reflected by the papers and should be of interest to anyone wishing to be kept up to date in the field

Model-Based Design for Embedded Systems

Gabriela Nicolescu,Pieter J. Mosterman,2018-09-03 The demands of increasingly complex embedded systems and associated performance computations have resulted in the development of heterogeneous computing architectures that often integrate several types of processors analog and digital electronic components and mechanical and optical components all on a single chip As a result now the most prominent challenge for the design automation community is to efficiently plan for such heterogeneity and to fully exploit its capabilities A compilation of work from internationally renowned authors Model Based Design for Embedded Systems elaborates on related practices and addresses the main facets of heterogeneous model based design for embedded systems including the current state of the art important challenges and the latest trends Focusing on computational models as the core design artifact this book presents the cutting edge results that have helped establish model based design and continue to expand its parameters The book is organized into three sections Real Time and Performance Analysis in Heterogeneous Embedded Systems Design Tools and Methodology for Multiprocessor System on Chip and Design Tools and Methodology for Multidomain Embedded Systems The respective contributors share their considerable expertise

on the automation of design refinement and how to relate properties throughout this refinement while enabling analytic and synthetic qualities They focus on multi core methodological issues real time analysis and modeling and validation taking into account how optical electronic and mechanical components often interface Model based design is emerging as a solution to bridge the gap between the availability of computational capabilities and our inability to make full use of them yet This approach enables teams to start the design process using a high level model that is gradually refined through abstraction levels to ultimately yield a prototype When executed well model based design encourages enhanced performance and quicker time to market for a product Illustrating a broad and diverse spectrum of applications such as in the automotive aerospace health care consumer electronics this volume provides designers with practical readily adaptable modeling solutions for their own practice
