Scheffold, 2013-11-09 Sponsored and organized by the Association of Swiss Chemists Photochromism: Molecules and Systems Heinz Dürr, Henri Bouas-Laurent, 2003-03-12 Photochromism is simply defined as the light induced reversible change of colour The field has developed rapidly during the past decade as a result of attempts to improve the established materials and to discover new devices for applications As photochromism bridges molecular supramolecular and solid state chemistry as well as organic inorganic and physical chemistry such a treatment requires a multidisciplinary approach and a broad presentation The first edition 1990 provided an enormous amount of new concepts and data such as the presentation of main families based on the pericyclic reaction mechanism the review of new families some bimolecular photocycloadditions and some promising systems This new edition provides an efficient entry into this flourishing field with the core content retained from the original work to provide a basic introduction into the different subjects Second edition of a work first published in 1990 now revised due to constant development of research Including updated lists of references 1989 2001 offering immediate access to recent developments Providing great basic interest and high application potential bringing scientists together from chemistry physics and engineering *Organic Photochemistry* James Morriss Coxon, Brian Halton, 1987-04-02 In the decade after this book first appeared in 1974 research involving organic photochemistry was prolific In this updated and expanded 1986 edition the authors summarise those classes of reaction that best illustrate the types of photochemical behaviour commonly observed for simple organic molecules The different products obtained from compounds subjected to thermal and photolytic activation are explained with the aid of appropriate diagrams and mechanistic schemes Where necessary these are backed up by simple energy level profiles Thus theory and empirical data are interwoven to provide a firm basis which is aided by the generous basic references at the end of each chapter

Heterocyclic N-oxides Angelo Albini, 2019-01-22 This book provides a comprehensive presentation of all aspects of heterocyclic N oxides Topics discussed include the preparation of these compounds by N oxidation of heterocycles and simultaneous synthesis of the ring and formation of the N oxide group general spectroscopic characteristics and molecular structure and reactions and recently devel My Life in the Golden Age of Chemistry F. D. Coyle, 1991-01-08 Introduction to Organic Photochemistry John D Coyle The Open University Milton Keynes The purpose of this book is to provide an introductory account of the major types of organic photochemical reactions to enable those with a prior knowledge of basic organic chemistry to appreciate the differences between processes which occur photochemically through an electronically excited state and those that occur thermally directly from the electronic ground state The material is organized according to organic functional groups in parallel with the approach adopted in most general textbooks on organic chemistry In this respect it differs from many of the existing older organic photochemistry texts The first chapter provides an account of the distinctive features of photochemical reactions and a physical mechanistic framework for the descriptions in the rest of the book The overall emphasis is on organic photoreactions potentially useful in synthesis The book thus integrates this branch of chemistry with broader aspects of the subject and introduces the reader to important applications of organic photochemistry
