Theoretical Issues in Reading Comprehension Rand J. Spiro, Bertram C. Bruce, William F. Brewer, 2017-11-03 Research in cognitive psychology linguistics and artificial intelligence the three disciplines that have the most direct application to an

understanding of the mental processes in reading is presented in this multilevel work originally published in 1980 that attempts to provide a systematic and scientific basis for understanding and building a comprehensive theory of reading comprehension. The major focus is on understanding the processes involved in the comprehension of written text. Underlying most of the contributions is the assumption that skilled reading comprehension requires a coordination of text with context in a way that goes far beyond simply chaining together the meanings of a string of decoded words. The topics discussed are divided into five general areas: Global Issues, Text Structure, Language Knowledge of the World and Inference, Effects of Prior Language Experience, and Comprehension Strategies and Facilitators, and represent a broad base of methodology and data that should be of interest not only to those concerned with the reading process but also to basic science researchers in psychology, linguistics, artificial intelligence, and related disciplines.

Powers of Reading Peter Szendy, 2025-03-11

A historical, literary, and philosophical study that transforms our understanding of reading, Peter Szendy offers a subtle, persuasive, and unprecedented account of the time of reading and its scene of address, one that is as archaic as it is contemporary. When we read, are we listening to a voice or being read to? If it is not a private and monologic exercise, how do we understand the populated scene of reading? What reads when we read, and how does reading push and pull between temporalities and voices? Why do we keep leaving the text when we seek to obey the injunction to stay within its terms? Questions such as these produce a fresh, even startling consideration of a wide range of literary and popular texts, including Hobbes' *Leviathan*, Flaubert's *Madame Bovary*, Kant's moral injunctions, Sade, Valéry, Blanchot, and de Certeau, but also modern fiction, film, audiobooks, and hypertext. The power of reading turns out to belong to its surprising engagement with time and direction: the deliberate reader stays close but strays, tries to fill in the gaps but gets pushed back by a countercurrent. The key to the text is sought outside only to be led back to the text, and its failure to deliver a final answer. Equally at odds with older versions of literary formalism that insist on the self-referentiality of the text as well as contextualists who scour an external social order to discover the truth of the text, Szendy approaches that very conflict as an oscillation constitutive of reading itself. Paradoxically, reading is sustained precisely by what interrupts its teleological flow. The result is a comic, profound, and timely reconceptualization of reading, which rushes forward only to find itself pushed back into the heart of the text, which discovers that this incessant breaking from the text, this headlong rushing ahead to the world outside the text, is a sequence of overreach, delay, and return that forms the ragged rhythm of reading itself. *Powers of Reading* is a patient, brilliant, and illuminating inquiry into the crosscurrents of voice and address, one that speaks to the speed and complexity of our time, how we are upended by our forward propulsions to consider how multiple voice, action, and passivity are all rearranged in the scene of reading.

Understanding and Teaching Reading Comprehension Jane Oakhill, Kate Cain, Carsten Elbro, 2014-08-21

The ultimate aim of reading is not the process but to understand what we read, and comprehension can take place at many

different levels There has been an increasing emphasis on the importance of reading comprehension in recent years but despite this there is very little written on this vital topic accessible to trainee and practicing teachers The Handbook of Reading Comprehension presents an overview of recent findings on reading comprehension and comprehension problems in children It provides a detailed examination of the characteristics of children who have reading comprehension difficulties and examines ways in which comprehension can be supported and improved It is accessibly written for students and professionals with no previous background in the psychology of reading or reading problems This indispensable handbook asks the question what is comprehension The authors consider comprehension of different units of language understanding single words sentences and connected prose and outline what readers and listeners have to do to successfully understand an extended text This book also considers comprehension for different purposes in particular reading for pleasure and reading to learn and explores how reader characteristics such as interest and motivation can influence the comprehension process Different skills contribute to successful reading comprehension These include word reading ability vocabulary knowledge syntactic skills memory and discourse level skills such as the ability to make inferences knowledge about text structure and metacognitive skills The authors discuss how each one contributes to the development of reading comprehension skill and how the development of these skills or their precursors in pre readers provides the foundation for reading comprehension development Areas covered include Word reading and comprehension Development of comprehension skills Comprehension difficulties Assessment Teaching for improvement Throughout the text successful experimental and classroom based interventions will be highlighted practical tips for teachers and summary boxes detailing key points and explaining technical terms will be included in each chapter

Development and Difficulties is a must have resource for researchers practitioners and graduate students in varied fields including child and school psychology assessment testing and evaluation social work and special education I think the book has the potential to be a game changer It will certainly challenge the expectations of policy makers not to mention the teachers of beginning readers These chapters will enhance the knowledge base of those in our schools who are charged with the lofty task of assuring that children have the best possible opportunities to acquire the skill of reading Sir Jim Rose Chair and author of Independent Review of the Teaching of Early Reading Final Report 2006

The Psychology of Reading

Mildred C. Robeck, Randall R. Wallace, 2017-11-06 The need to know why as well as how children and youth respond as they do to reading instruction has guided the selection of this book's content The second edition of this title originally published in 1990 has retained and elaborated upon the three major themes previously presented that reading is a linguistic process that motivation the affective domain may be as important in learning to read as the cognitive domain and that the reality of learning theory is to be found in the mechanisms of the brain where information is mediated and memory traces are stored The text integrates views from cognitive psychology psycholinguistics and neuropsychology as they relate to reading and writing A learning motivation model is provided to present associative learning conceptualization and self directed reading in a hierarchical relationship with distinct cognitive and affective components The distinction between beginning and proficient reading is maintained throughout the text
