New Advances in Genetic Studies to Understand Yeast Adaptation to Extreme and Fermentative Environments

Francisco A. Cubillos, Amparo Querol, Cecile Fairhead, Roberto Nespolo, Roberto Pérez-Torrado, 2021-04-30

Non-conventional Yeasts: from Basic Research to Application Andriy

Sibirny, 2019-08-12 This volume scopes several aspects of non conventional yeast research prepared by the leading specialists in the field An introduction on taxonomy and systematics enhances the reader s knowledge on yeasts beyond established ones such as *Saccharomyces cerevisiae* Biotechnological approaches that involve fungal utilization of unusual substrates production of biofuels and useful chemicals as citric acid glutathione or erythritol are discussed Further strategies for metabolic engineering based on knowledge on regulation of gene expression as well as sensing and signaling pathways are presented The book targets researchers and advanced students working in Microbiology Microbial Biotechnology and Biochemistry

Molecular Mechanisms and Physiological Significance of Organelle Interactions and Cooperation Michael Schrader, Markus Islinger, 2017-02-28 Eukaryotic cells contain distinct membrane bound organelles which compartmentalise cellular proteins to fulfil a variety of vital functions Many organelles have long been regarded as isolated and static entities e g peroxisomes mitochondria lipid droplets but it is now evident that they display dynamic changes interact with each other share certain proteins and show metabolic cooperation and cross talk Despite great advances in the identification and characterisation of essential components and molecular mechanisms associated with the biogenesis and function of organelles information on how organelles interact and are incorporated into metabolic pathways and signaling networks is just beginning to emerge Organelle cooperation requires sophisticated targeting systems which regulate the proper distribution of shared proteins to more than one organelle Organelle motility and membrane remodeling support organelle interaction and contact This contact can be mediated by membrane proteins residing on different organelles which can serve as molecular tethers to physically link different organelles together They can also contribute to the exchange of metabolites and ions or act in the assembly of signaling platforms In this regard organelle communication events have been associated with important cellular functions such as apoptosis antiviral defense organelle division biogenesis ROS metabolism and signaling and various metabolic pathways such as breakdown of fatty acids or cholesterol biosynthesis In this research topic we will focus on recent novel findings on the underlying molecular mechanisms and physiological significance of organelle interaction and cooperation with a particular focus on mitochondria peroxisomes endoplasmic reticulum lysosomes and lipid droplets and their impact on the regulation of cellular homeostasis Our understanding of how organelles physically interact and use cellular signaling systems to coordinate functional networks between each other is still in its infancy Nevertheless recent discoveries of defined membrane structures such as the mitochondria ER associated membranes MAM are revealing how membrane domains enriched in specific proteins transmit signals across organelle boundaries allowing one organelle to

influence the function of another In addition to its role as a mediator between mitochondria and the ER contacts between the MAM and peroxisomes contribute to antiviral signaling and specialised regions of the ER are supposed to initiate peroxisome biogenesis whereas intimate contacts between peroxisomes lipid droplets and the ER mediate lipid metabolism In line with these observations it is tempting to speculate that further physical contact sites between other organelles exist Alternatively novel regulated vesicle trafficking pathways between organelles e g mitochondria to peroxisomes or lysosomes have been discovered implying another mode of organelle communication Identifying the key molecular players of such specialised membrane structures will be a prerequisite to understand how organelle communication is physically accomplished and will lead to the identification of new regulatory networks In addition to the direct transmission of interorganellar information cytosolic messenger systems e g kinase phosphatase systems or redox signaling may contribute to the coordination of organelle functions This research topic will integrate new findings from both modes of communication and will provide new perspectives for the functional significance of cross talk among organelles We would like to thank all the researchers who contributed their valuable work to this research topic Furthermore we are grateful to the reviewers and Associate Editors who contributed valuable comments and positive criticism to improve the contributions

The Yeasts - A Taxonomic Study Cletus Kurtzman, J.W. Fell, 1998-03-20 The yeasts are a phylogenetically diverse group of fungi characterized by unicellular growth Yeasts have been used for bread making and brewing beverages for millennia and have become increasingly important in biotechnology for production of fuel alcohol organic acids enzymes and various pharmacologically important chemicals Other species are serious human animal and plant pathogens Since publication of the 3rd edition of this book in 1984 numerous new species and genera have been described many because of the application of new molecular biological methods Molecular

comparisons have now provided a phylogenetic distinction between the yeasts and other fungi some of which have a unicellular growth phase This book is the most definitive treatment of taxonomy and systematics of yeasts available and has been prepared by an international team of experts and is directed at taxonomists ecologists mycologists microbiologists clinicians molecular geneticists and biotechnologists *Yeast* Antonio Morata,Iris Loira,2017-11-08 *Yeast Industrial Applications* is a book that covers applications and utilities of yeasts in food chemical energy and environmental industries collected in 12 chapters The use of yeasts in the production of metabolites enzymatic applications fermented foods microorganism controls bioethanol production and bioremediation of contaminated environments is covered showing results methodologies and processes and describing the specific role of yeasts in them The traditional yeast *Saccharomyces cerevisiae* is complemented in many applications with the use of less known non *Saccharomyces* yeasts that now are being used extensively in industry This book compiles the experience and know how of researchers and professors from international universities and research centers Continuous Cultivation of Microorganisms I. Malek,2012-12-02 *Continuous Cultivation of Microorganisms* deals with research studies on the continuous processes in cultivation and their applications in industrial production Divided into 40 chapters the book is composed of contributions of authors who have conducted extensive studies on continuous cultivation The discussions start with situations and trends in the advancement of continuous cultivation multi stage continuous culture the theory of multi stage continuous cultures and a stochastic model of continuous cultivation of microorganisms in several vessels This discussion is followed by the presentation of the theory of continuous fermentation the use of continuous culture method for analyzing cell functions and a comparative study of cell mass production in a single and multistage cultivation The book goes further with discussions on soil microbiology and the processes and environments involved in the culture of bacteria The text also presents the fermentation processes of beer lactic acid alcohol and liquor The discussions are supported by methods experiments and numerical representations The book also discusses electronic programs or automatic controls involved in fermentation processes The selection is a vital source of data for those who are interested in conducting research on continuous cultivation
