Recent Advances In Blood Coagulation:

Recent Advances in Blood Coagulation L. Poller, 1969 **Recent Advances in Blood Coagulation** Leon Poller, 1969 Recent Advances in Thrombosis and Hemostasis K. Tanaka, E.W. Davie, 2009-01-15 Now more than ever thrombotic and thromboembolic disorders as well as related diseases such as malignancies arteriosclerosis diabetes mellitus hypertension and obesity are the leading causes of morbidity and mortality They have become urgent medical problems with serious economic consequences in industrialized and developing countries alike At the same time the impact of molecular biology and genetics on our understanding of thrombosis and hemostasis is rapidly growing stronger as well as our knowledge of regeneration and development of specific tissues organs and embryos Researchers are also constantly learning more about cardiovascular diseases as well as regulatory mechanisms for various intrinsic and extrinsic stimuli in viable tissues In this volume our intention has been to present the latest relevant information in molecular biology and genetics as well as the clinical implications of a better understanding of pathophysiology novel diagnostic methodologies and therapeutic applications for new methods of prevention in thrombosis hemostasis and related disorders including atherosclerosis The dramatic advances in knowledge of thrombosis hemostasis and vascular biology since the first publication of Recent Advances in Thrombosis and Fibrinolysis edited with Japanese colleagues in 1991 have required extensive revision in order to highlight and review recent progress in the field The editors also gratefully welcome the seven distinguished non Japanese authors who with their valuable contributions on subjects beyond the coverage by Japanese authors have made this new edition truly international Current Aspects of Blood Coagulation, Fibrinolysis, and Platelets Ming-Ching Shen, Che-Ming Teng, Akikazu Takada, 2013-11-11 The first Sino Japanese symposium on Coagulation Fibrinolysis and Platelets originating from the Hamamatsu symposium held in early 1990 was held in Hanchow Mainland China in October 1990 During that meeting Taipei was selected as the next meeting place We took great pleasure in carrying out this noble endeavor and were honored to have Professor Stenflo Professor Hedner from Sweden Professor Aoki and many other distinguished scientists from Japan joining us on this Second Sino Japanese symposium Our only regret was that our friends from Mainland China did not attend The topics covered during the 3 day symposium included areas of both basic and clinical research The symposium has been an excellent opportunity for all the participants to exchange ideas and improve their expertise and at the same time to expand frontiers in the field of coagulation fibrinolysis and platelets The symposium was very successful both in terms of contributing greatly to raise the level of research and development in the field of thrombosis and hemostasis and in helping to promote international scientific cooperation and friendship We would like to express our appreciation to the members of our organizing and scientific committee for their devotion to this project We also wish to thank our National Science Council and Department of Health and the Asia and Pacific Council for Science and Technology as well as the many other sponsors for their financial support Without them this instructive and invaluable symposium and this proceedings would not have been
