## **Recent Advances In Obesity Research Vol 1:**

**The Treatment of Obesity** J.F. Munro, 2013-03-09 During the last few years there has been growing medical interest in the problem of obesity Although this may not have resulted in a dramatic breakthrough in our understanding of the condition at least we are now more aware of our ignorance Possibly this partly explains the increasing medical concern for and sympathy in the management of the obese In the introductory chapter John Garrow says that he believes it would be better to treat a few people well than many subjects unsuccessfully This theme is developed in those chapters which deal with specific forms of therapy including exercise protein sparing fasting and bypass surgery while the chapters on pharmacological agents review our knowledge and our ignorance of the mode of action and efficacy of the currently available drugs Almost in contrast the chapter on behavioural therapy and group therapy suggests that obesity is a problem which could best be tackled on a community basis Clearly such an approach is very attractive and the combination of behavioural therapy and slimming organizations would appear to offer the best prospects of controlling most subjects weight problems There will always remain however the individual patient in whom there will be a place for the various special techniques now available It is hoped that this book will contribute to a greater understanding of the various problems faced by the obese and the regimes that can be offered J F MUNRO xi 1 How to treat and when to treat J S Understanding Obesity: From its Causes to impact on Life Rosário Rosário, Maria João Martins, 2020-04-28 Understanding Obesity informs readers about contributing factors to obesity from social and behavioral determinants throughout the life course influences from before we are born to what we eat nutrients and food contaminants which impact body weight gut bacteria and the way accumulated energy from nutrition is spent Chapters will also inform readers about adipose tissue the dynamic role of the adipose tissue during obesity development the pressure put on to its remodeling and differences in obesity phenotypes regarding association with pathological outcomes as well as the latest advances in finding biological markers of adipose tissue dysfunction and the latest treatment options for obesity Special topics such as the bidirectional relationship of stress with obesity and the influence of aging on the onset of metabolic disorders that lead to obesity are also discussed Understanding Obesity is a valuable reference for health researchers practitioners endocrinologists family physicians nurses as well as decision makers in healthcare and other professional settings who are seeking a holistic understanding about the causes of obesity and ways to address it Key Features 17 chapters cover obesity from a diverse range of perspectives medical information is presented adipose physiology and different disease conditions relevant to obesity educational social and psychological issues as central when caring for obesity patients are emphasized the latest information on obesity treatment options including medical pharmaceutical and surgical options is included bibliographic references have been provided for further reading

**Behavioral Medicine with the Developmentally Disabled** J.H. Kedesdy,D.C. Russo,2013-11-11 Since the late 1960s the behavioral treatment of mentally retarded autistic and other developmentally disabled persons has grown progressively more sophisticated The literature on behavioral treatment has produced effective and clinically significant programs for the reduction of maladaptive behaviors such as tantrums aggression and self injury skills deficits have been remediated through improved programs for language and life skills acquisition and new environments have been opened in the creation of mainstream educational opportunities In spite of these advances it strikes us that this almost exclusive focus on behavior problems and skills remediation has been somewhat myopic and that much of the potential for application of

behavioral science to solving problems of the developmentally disabled is as yet untapped In the 1980s an important revolution has taken place the development of the field of behavioral medicine This field in merging disease treatment and management with learning and behavior has already made impressive progress toward a reconceptualization of health care that acknowledges the centrality of behavior in disease expression Although there has as yet been only a preliminary application of this reconceptualization to the field of developmental disabilities we are convinced that further extension has great potential

The Cambridge Diet J. Marks, A.N Howard, 2012-12-06 Obesity in affluent countries continues to be a serious problem When one runs an Obesity Clinic there appears to be an unending series of patients who need help Our understanding of weight control has been advanced not only by the studies of obese patients but also by our investigation of the problems of weight gain in young women with anorexia nervosa Just as among obese patients there is the group of efficient metabolizers who can maintain their excessive weight with a calorie intake occasionally as low as 600 kcal per day so we have demonstrated that among anorexic women there are a few who may fail to gain normal weight with 3500 kcal per day Some of the latter group may in fact develop T3 triiodothyronine thyrotoxicosis One of the major unknown factors is still what determines when patients may be at these extremes If we knew how to control these extremes we would like for a time to switch each to the opposite end of the spectrum One factor which is becoming apparent from studying people in the machine which continually plots metabolic rate is that the metabolic response to food is a major factor in determining a person's weight In general terms there is a tendency for those who are below their ideal weight to have an increased metabolic response to food and those who are above ideal weight to have a reduced metabolic response to food
