Neurological Research National Institute of Neurological Diseases and Stroke (U.S.), 1969 Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a

participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social

The Performance of Trauma in Moving Image Art Dirk Cornelis de Bruyn, 2014-10-02 With reference to recent neurological research into Post Traumatic Stress Disorder PTSD using new imaging technologies and models of implicit and explicit memory systems developed from this research The Performance of Trauma in Moving Image Art examines the capacity of an artist's cinema of experimental and avant garde film to perform and communicate traumatic experience De Bruyn analyses key films from the 1940s to the present that perform aspects of overwhelming experience through their approach structure content and perceptual impact mapping a trajectory from analogue to contemporary digital moving image practice He argues for the inclusion of Peter Gidal's 1970s conception of materialist film into the genre of trauma cinema through its capacity to articulate unlocatability and perceptually perform disorientation and a flashback effect all further identified here as key characteristics of digital moving image practice The discussion explores the following questions Can materialist film model traumatic memory and perform the traumatic flashback Does the capacity to articulate trauma's unlocatability and invisibility give this practice a renewed relevance in digital media's preoccupation with surface and the impact of information overload De Bruyn's phenomenological traumatic reading of materialist film steps beyond Gidal's original anti illusionist rationale to incorporate critiques effectively mounted against it by the founders of a 70s feminist psychoanalytic counter cinema This contemporary re-reading further re-evaluates the Minimalist turn in painting

and sculpture after the Second World War arguing that this development is not essentialist or visionary but makes visible the implicit mechanisms of denial and erasure at the core of traumatic remembering For de Bruyn the initial traumatic impact of industrialization on the body's perceptual apparatus traceable through the advent of cinema and train travel is communicated by such moving image art The development of digital technology marks a new cycle of such perceptual re-balancing for which materialist film is uniquely positioned and which it critically addresses **List of Journals Indexed in**

Teaching Literature in the Secondary School Janet Alsup,2015-04-17 Taking a close look at the forces that affect English education in schools at the ways literature cognitive science the privileging of the STEM disciplines and current educational policies are connected this timely book counters with a strong argument for the importance of continuing to teach literature in middle and secondary classrooms The case is made through critical examination of the ongoing culture wars between the humanities and the sciences recent research in cognitive literary studies demonstrating the power of narrative reading and an analysis of educational trends that have marginalized literature teaching in the U.S. including standards based and scripted curricula The book is distinctive in presenting both a synthesis of arguments for literary study in the middle and high school and sample lesson plans from practicing teachers exemplifying how literature can positively influence adolescents intellectual emotional and social selves *Departments of Labor, and Health, Education and Welfare, and*
