Binon,J.-M. Frère,J.-P. Peigneux,1989 **Physics at KAON** Dieter Frekers,David R. Gill,Josef Speth,2012-12-06 Physics at KAON an international meeting jointly organized by the KFA Jillich and TRI UMF was held in the Physikzentrum Bad Honnef from June 7 through June 9 1989 This was one of a series of meetings the first one in Europe in which plans for the medium energy physics laboratory KAON were presented and some aspects of the physics at this new facility were discussed The meeting focussed mainly on the topics of hadron spectroscopy J meson scattering strangeness in nuclei and rare decays Also presented were some of the research programs at SATURNE and COSY which may well lead to KAON physics in the future These proceedings include articles which summarize our current experimental and theoretical knowledge in the various areas as well as papers which describe lines of research feasible with KAON The large number of participants limited in fact by the capacity of the Physikzentrum clearly demonstrates the great interest of the European physics community in the research avenues which will be opened by the high intensity hadron facilities March 1990 D Frekers D R Gill J Speth Contents Opening remarks By E Vogt SI The TRIUMF kaon factory accelerators By M K Craddock S3 Experimental facilities By P Kitching S9 Polarized internal targets at KAON By C A Miller S21 Hyperons in the bound state approach to the Skyrme model B Physics And Cp Violation: Proceedings Of The 2nd International Conference Thomas E Browder,Frederick A Harris,Sandip Pakvasa,1998-04-04 CP violation is one of the most subtle effects in the Standard Model of particle physics and may be the first clue to the physics that lies beyond Charge conjugation C and parity P are symmetries of particle interactions C corresponds to the operation of replacing a particle by its antiparticle while P is the operation of mirror reflection Before 1956 it was believed that these were also symmetries of the interactions of elementary particles In 1956 C S Wu found evidence for P violation in the weak interaction Theorists proposed that the combination of CP would be a symmetry of the weak interaction In 1964 Christenson Cronin Fitch and Turlay found the first evidence for the violation of CP symmetry in the decays of kaons Although Kobayashi and Maskawa then showed how the Standard Model can accommodate the observed CP violation Wolfenstein pointed out that it is also possible that there is a new interaction in addition to the usual four called the superweak interaction which is responsible for the asymmetry To test this idea the observation of a different type of asymmetry called direct CP violation is required in the kaon sector very precise measurements of the ratio of kaon decay rates are necessary In B decay modes where a second order weak process whimsically named penguin interferes with another suppressed first order tree amplitude it may also be possible to observe these direct CP violating effects B physics and CP violation is now one of the

major growth areas in high energy physics Nearly every major high energy physics laboratory now has a project underway to observe the large CP asymmetries expected in the B sector and to test the consistency of the Standard Model The unitarity of the Kobayashi Maskawa mixing matrix in the Standard Model implies the existence of three phases called alpha beta and gamma which can be determined by the measurements of CP asymmetries in B decays About 200 participants gathered in Hawaii in March 1997 to discuss the progress in the field and this important book constitutes the proceedings of that conference **Beam Line** ,1992 Publications of the National Bureau of Standards, 1987 Catalog United States.
