Second Opinions Sixty Psychotherapy Patients Evaluate Their Therapists:

Second Opinions Lee D. Kassan, 1999 Lee Kassan interviewed sixty patients about their experiences in psychotherapy and found that they often told him things they had never told their therapists The book is divided into three main sections The Beginning covers the decision to enter treatment the selection of the therapist and initial sessions The Treatment deals with patients and therapist behavior in the course of therapy The Ending probes the reasons for stopping what happened afterward and feelings about the overall experience as seen with hindsight The results show that many patients are undereducated about what to expect in therapy and how the process works Patients who are angry or unhappy or uncertain about what the therapist is doing do not always say so They need to know that it is not only permitted but an important part of the work to question the therapy and the behavior of the therapist and to know further that if they do not speak up and the therapist argues defends and ignores the feedback there is a serious problem How to Fail As a Therapist Bernard Schwartz, John Flowers, John V. Flowers, 2010 From the Foreword by Arnold Lazarus PhD ABPP I shudder when I think when I as a newly minted PhD in clinical psychology was certified as competent and qualified it is not farfetched to say I knew next to nothing Newly minted therapists aren't alone in making mistakes of course even seasoned professionals can benefit from discovering the 50 most common errors therapists make and how to avoid them Newly revised and updated this indispensable guide includes more case examples and adds seven ways to fail with child patients too How to Fail details how to avoid errors such as not recognizing limitations performing incomplete assessments ignoring science ruining the client relationship setting improper boundaries terminating improperly therapist burnout and more Psychoanalytic Psychotherapy Nancy McWilliams, 2004-03-18 Addressing the art and science of psychodynamic treatment Nancy McWilliams distills the essential principles of clinical practice including effective listening and talking transference and countertransference emotional safety and an empathic attuned attitude toward the patient The book describes the values assumptions and clinical and research findings that guide the psychoanalytic enterprise and shows how to integrate elements of other theoretical perspectives It discusses the phases of treatment and covers such neglected topics as educating the client about the therapeutic process handling complex challenges to boundaries and attending to self care Presenting complex information in personal nontechnical language enriched by in depth clinical vignettes this is an essential psychoanalytic work and training text for therapists Who Could We Ask? Lee D Kassan, 2007-05 Leading gestalt therapist Michael Kriegsfeld led therapy groups around the world Gestalt therapy focuses on conflicts between aspects of the self and the attempt by patients to avoid responsibility for their choices and behavior When Kriegsfeld died suddenly in 1992 he left 170 three hour long videotapes of his work with groups in the United States and Europe Through excerpts from these tapes author Lee Kassan provides examples of Kriegsfeld's methods that will be of use to every therapist regardless of his or her field Divided into five main sections Who Could We Ask The Gestalt Therapy of Michael Kriegsfeld delivers a revealing

personal portrait of Kriegsfeld Kassan explains Kriegsfeld's theory of the gestalt model as an alternative to the medical model that dominates the therapy field today Kassan brilliantly illustrates and explains the procedures that Kriegsfeld used in gestalt therapy Informative and intimate Who Could We Ask is a rare glimpse of a master therapist at work *The Dynamics of Persuasion* Richard M. Perloff, 2010-05-26 The Dynamics of Persuasion provides a comprehensive and up to date introduction to persuasive communication and attitude change Offering a thorough discussion of classic and contemporary theories of persuasion this text explores the structure and functions of attitudes consistency between attitude and behavior and issues in attitude measurement *Thoughts for Therapists* Bernard Schwartz, John Flowers, John V. Flowers, 2008 Therapists use words to help guide their clients through difficult times but where are the words that can guide the healers as they develop professionally struggle with difficult cases adapt to changing times Here for practitioners and students is a reference work which contains the best thoughts of the best thinkers in the field of psychotherapy addressing the breadth and depth of what it means to be a therapist Schwartz and Flowers have searched through hundreds of books old and new as well as thousands of journal articles to find those words The book is organized into nine core topic areas and includes quotations the authors own modest reflections relevant case histories anecdotes and references for further reading Clients can be difficult and psychotherapy practice stressful Keep this insightful volume within easy reach for inspiration for guidance for sustenance *What do Patients Want?* Christine A. S. Hill, 2018-04-17 This book allows patients to speak for themselves about their psychoanalytic experiences It challenges the preconceived perception that the analytic practitioner knows best when it comes to treatment and responds to the growing sophistication of those seeking the treatment *Como falhar na relação? Immunoglobulin Therapy in the 21st Century: The Dark Side of the Moon Isabella Quinti, Marcella Visentini, Albert Farrugia, 2015-11-20 In the early decades since the introduction in the early 80s of immunoglobulin therapy many studies tried to identify which clinical indications might benefit from the therapy which treatment schedules are effective and safe It is universally accepted that immunoglobulin therapy is a life saving treatment in patients with PID The rise of new indications for further different clinical conditions resulted in a steady increase in demand for immunoglobulins Currently the consumption of immunoglobulin for PID represents a small fraction of the market In the recent past we have been observing 1 An increase in the demand for plasma and in the consequent need to increase the number of donors 2 Changes in methods to improve IgG recovery and to increase productivity as a response to growing clinical demand 3 Introduction of immunoglobulin treatments with higher concentration 4 Changes in the timing of administration with an increase in the rate of infusion 5 Introduction of immunoglobulin treatment administered subcutaneously mainly confined initially to patients with PID and later extended to other clinical indications which often require higher volumes of infusion Doctors following patients with PID were initially alarmed only to a possible risk of shortage More relevant and less discussed appear the possible consequences of 1 the risk of an improper transfer of information on treatments from a clinical indication to another In particular the idea of a mere replacement function in patients with PID might possibly be borrowed from the model of other clinical conditions requiring a replacement such as haemophilia In PID immunoglobulin treatment instead is obviously replacing a missing feature However other immune alterations are responsible for the large number of PID associated diseases including inflammatory manifestations and tumors common causes of morbidity and mortality The immunomodulatory effects of immunoglobulin administered at replacement dosages on multiple cells and immune system functions are still largely to be checked in in vitro studies and in vivo 2 the changes in the immunoglobulin production and schedules of administration These should have been assessed in

studies of drug surveillance necessary in order to evaluate on large numbers of what it is initially reported on patients enrolled in the pivotal clinical trials usually in the absence of most of the main disease associated clinical conditions affecting pharmacokinetics efficacy and tolerability Severe side effects are now more frequently reported This requires surveillance studies in order to verify the tolerability Nowadays personalized health research presents methodologic challenges since emphasis is placed on the individual response rather than on the population Even within a universally accepted indication such as in PID the identification of prognostic markers should guide the therapeutic intervention 3 the risk of a decrease in the surveillance and monitoring of PID associated clinical conditions In fact self administration of immunoglobulins administered subcutaneously increased the independence of a number of patients On the other hand it led to the reduction in the number of contacts between specialized centers and patients who often require a close monitoring of disease associated conditions A wide debate between experts is necessary to afford the new challenge on immunoglobulin usage **Study**
