The Second Workshop on Grand Unification LEVEILLE,SULAK,UNGER,2012-12-06 Recently there has been rapid progress towards understanding the separate theories of the strong weak and electromagnetic interactions within the framework of the standard $SU(3) \times SU(2) \times U(1)$ model The purpose of the Second Workshop on Grand Unification was to discuss the physics beyond the standard model and the major topic was grand unified theories which unify the strong weak and electromagnetic sectors Grand unified theories are presently being used to calculate experimentally accessible quantities such as the proton lifetime and nucleon decay branching ratios Meanwhile experiments are currently being performed and new dedicated experiments mounted to measure these quantities Reports on these experimental and theoretical activities occupied much of the workshop Furthermore since grand unified theories allow one to extrapolate the behavior of the universe back to the first instants after the big bang their cosmological implications and the constraints on these theories from cosmology were of great interest at the workshop The conference opened with a keynote address by S L Glashow in which he discussed among other topics baryon minus lepton number conservation neutrino masses and a neutrino free universe To maximize the interplay between theorists and experimentalists theoretical and experimental talks were interleaved An experimental highlight of the workshop was the presentation by S Miyake of three candidate events for proton decay

Nielsen,1991 The development in our understanding of symmetry principles is reviewed Many symmetries such as charge conjugation parity and strangeness are no longer considered as fundamental but as natural consequences of a gauge field theory of strong and electromagnetic interactions Other symmetries arise naturally from physical models in some limiting situation such as for low energy or low mass Random dynamics and attempts to explain all symmetries even Lorentz invariance and gauge invariance without appealing to any fundamental invariance of the laws of nature are discussed A selection of original papers is reprinted **High Energy Physics and Nuclear Structure** P. scope of this monograph is to show that our classical quantum and cosmological knowledge of antimatter is at its beginning with much yet to be discovered and that a commitment to antimatter by experimentalists will be invaluable to antimatter science This is also the first book presenting the isodual theory of antimatter It is aimed at scientists and researchers in theoretical physics The Origin and Evolution of Galaxies J.T.
