Second generation Reforms In Infrastructure Services:

Second-generation Reforms in Infrastructure Services Federico Basañes, Robert D. Willig, 2002 Editor's description
During the past two decades Latin American countries have made pioneering efforts in reforming infrastructure services. The first generation of reforms encompassed widespread privatization, deregulation, and restructuring of the provision of energy, water, transport, and telecommunications services. *Second Generation Reforms in Infrastructure Services* evaluates the current challenges leading to the consolidation of the initial reforms. This volume deals with post-privatization dispute settlement mechanisms, access arrangements in network industries, and inroads to effective competition in the reformed industries. The authors evaluate a set of contractual adjustments resulting from renegotiations and disputes that have taken place since the beginning of the reform process. In an effort to promote competition in the provision of public services, the authors suggest some practical rules for pricing access in network industries. The book presents a dynamic global vision of second generation reforms underway in energy markets around the world. See more at <https://publications.iadb.org/handle/11319/310> sthash M23WTIKV.dpuf

Regulatory Governance in Infrastructure Industries Bernardo Mueller, 2006-01-01
This paper assesses and measures regulatory governance in 21 infrastructure regulators in Brazil. Regulatory Governance is decomposed into four main attributes: autonomy, decision rules, means and tools, and accountability. A ranking is proposed and the main areas for improvement identified. A comparison of the proposed regulatory governance index and other indexes internationally available is performed. Section 2 sets up the analytical framework for the report, identifying key components of regulatory governance: namely, autonomy, political and financial procedures for decision making, tools and means, including personnel, and accountability. Section 3 assesses each of these components in practice, reporting the results of a survey with 21 regulatory agencies in Brazil, which was designed and implemented in 2005. Section 4 measures regulatory governance based on three related indexes, ranks the Brazilian regulators among themselves, and compares the proposed indexes with other two indicators available in the literature. Section 5 presents the conclusions.

International Handbook of Network Industries Matthias Finger, R. W. K.enneke, 2011
To learn about how economic and institutional forces have shaped the network industries and policies towards them, read the first part of the book. To discover their impacts on particular industries, read the second part. And to find out what has happened in particular countries, read the third part. I think anyone interested in network industries should read all of it. The book's structure allows for many interesting comparisons across countries and sectors. Richard Green, University of Birmingham, UK. This is a very useful and comprehensive guide to reforms in network industries in communications, energy, transport, and water. It is organized by generic topic, sector, and region. Its authors are acknowledged experts. I am confident that this Handbook will be a widely read and valuable resource for many years. Martin Cave, London School of Economics, UK. Quite an accomplishment, this Handbook provides by far the most comprehensive overview of the role of the private sector and competition in infrastructure industries, with thoughtful surveys

of each of the major infrastructure sectors and of the key regions and countries Jos G mez Ib ez Harvard University US In recent decades all infrastructures have undergone significant restructuring This worldwide phenomenon is often labelled liberalization and although expectations were high with respect to lower prices greater efficiency and innovation the expected gains have not always been fully realized This extensive state of the art Handbook provides a comprehensive overview of the various experiences of liberalization across different sectors regions and disciplines The multidisciplinary approach focuses on the economic political and institutional aspects of liberalization as well as to a lesser extent on technological issues As such it constitutes a unique contribution as this broad overview is often lost in the sector specific country focused and purely disciplinary approaches prevalent in the current literature Sectors explored include telecoms the Internet energy and transport whilst the truly global perspective incorporates unique case studies from an array of developed and developing countries including the US China India and the EU The International Handbook of Network Industries will become the definitive volume for academics researchers and students of economics political science and law interested in infrastructure regulation It will also prove a valuable guide to practitioners and policy makers involved in liberalization and competition **An Enduring Partnership for Development** William R. Multinational Enterprises in Latin America since the 1990s P. Toral, 2011-06-06 This volume provides an original analysis of the role of foreign firms in the structural reforms implemented by the Latin American governments since the 1980s with a focus on the making of the Spanish multinational enterprise *The Rise of the Regulatory State of the South* Navroz K. Dubash, Bronwen Morgan, 2013-06-27 The 1990s and 2000s have witnessed a spurt of energetic institution building in the developing world as regulatory agencies emerge to take over the role of the executive in key sectors This rise of the regulatory state of the south is barely noticed both by scholars of regulation and of development let alone adequately documented and theorized Yet the consequences for the role of the state and modalities of governance in the south are substantial as politically charged decisions are handed over to formally technocratic agencies creating new arenas and forms of contestation over the gains and losses from development decisions Moreover this shift in the developing world comes at a time when the regulatory state in the north is under considerable stress from the global financial crisis Understanding the regulatory state of the south and particularly forms of accommodation to political pressures could stimulate a broader conversation around the role of the regulatory state in both north and south This volume seeks to provoke such a discussion by empirically exploring the emergence of regulatory agencies of a range of developing countries across Asia Africa and Latin America The cases focus on telecommunications electricity and water sectors that have often been at the frontlines of

this transition The central question for the volume is Are there distinctive features of the regulatory state of the South shaped by the political economic context of the global south in the last two decades To assist in exploring this question the volume includes brief commentaries on the case studies from a range of disciplines development economics law and regulation development sociology and comparative politics Collectively the volume seeks to shape the contours of a productive inter disciplinary conversation on the emergence of a significant empirical phenomenon the rise of regulatory agencies in the developing world with implications both for the study of regulation and the study of development

Bridging Microeconomics and Macroeconomics and the Effects on Economic Development and Growth Kostis, Pantelis C.,2020-10-30 In recent decades the mainstream microeconomic and macroeconomic analysis was proven to be insufficient for exploring the dynamic and complex interactions among humans institutions and nature in our real economy On the one side microeconomics is filled with black box models that fail to study the actual contractual relations between firms and markets while on the other side macroeconomics were proven useless because they mistook the beauty of theoretical models for truth Thus questions have arisen about using new theoretical and empirical structures that would better describe our economic systems Bridging Microeconomics and Macroeconomics and the Effects on Economic Development and Growth is an essential reference source that analyzes the hypotheses that govern the relationships of aggregate structures macroeconomic analysis that may be compatible with the assumptions that govern the behavior of individuals households and firms micro analysis and vice versa in trying to achieve sustainable economic development and growth Moreover modern evolutionary growth thinking is used in trying to bridge the inconsistencies between microeconomics and macroeconomics and confront their failures in order to better describe the economic reality While highlighting a broad range of topics including globalization economic systems and the role of institutions this book is aimed toward economic analysts financial advisors policymakers researchers academicians and students **The Political**
