### **Secure Information Management Using Linguistic Threshold Approach** Marek R. Ogiela, Urszula

Ogiela, 2013-08-19 In recent years cryptographic techniques for protecting and hiding secret information have been included in directions of research on intelligent information management. Data can be managed securely due to the use of algorithms for ensuring the confidentiality of data, information splitting techniques as well as protocols for sharing information and methods of its reconstruction. This is why techniques of advanced splitting and reconstruction of information form the primary subject of *Secure Information Management Using Linguistic Threshold Approach* whose main purpose is to discuss the so called linguistic threshold schemes for information sharing. An attempt is also made to describe the opportunities of using these techniques to create new models of managing strategic information shared within a commercial organisation or a state institution. Such information is specially protected and its contents are used only if the authorised users are enabled to access it. This monograph attempts to define a model structure of information flow and for assigning information shares to particular groups of individuals concerned. The proposed information flow model can be integrated into practical solutions within any organisation or institution improving the functionality of its legacy information systems. The use of strong mathematical cryptographic models to manage information constitutes a scientific innovation and a demonstration of the methods and opportunities of using advanced techniques for confidentially exchanging information in tasks supporting data flow within a commercial organisation. The interdisciplinary nature of the solutions proposed means that the subject of linguistic threshold schemes forming part of intelligent information management becomes a new challenge for the research and application work carried out. The authors of this monograph hope that it will guide readers on an interesting journey through the cutting edge solution in the field of secure information management.

**Advances in Software Engineering** Changhoon Lee, 2009-11-02 As software engineering (SE) becomes specialized and fragmented it is easy to lose sight that many topics in SE have common threads and because of this advances in one sub discipline may transmit to another. The presentation of results between different sub disciplines of SE encourages this interchange for the advancement of SE as a whole. Of particular interest is the hybrid approach of combining ideas from one discipline with those of another to achieve a result that is more significant than the sum of the individual parts. Through this hybrid philosophy a new or common principle can be discovered which has the propensity to propagate throughout this multifaceted discipline. *American Avant-garde Cinema's Philosophy of the In-between*  
Rebecca Sheehan, 2020 Can films philosophize rather than simply represent philosophical ideas developed outside of the cinematic medium Taking up this crucial question for the emergent field of film philosophy *American Avant Garde Cinema's Philosophy of the In Between* argues that the films of the American avant garde do in fact do philosophy and illuminates the ethical stakes of their aesthetic interventions Author Rebecca A Sheehan contends that American avant garde cinema's characteristic self reflexivity is an interrogation of the modes and stakes of our engagement with the world on and beyond the screen The book demonstrates this with the theory of the in between a pervasive figure that helps clarify how avant garde cinema's reflections on the creation of images construct an ethics of perception itself a responsibility to perpetuate thought in an enduring re encounter with the world and with meaning's unfinished production The book is structured by a taxonomy of the multiple in betweens evident in American avant garde filmmaking Rather than systematically seeking reproductions of particular philosophers ideas in avant garde films Sheehan derives categories of analysis and the philosophical claims they disclose from close readings of the films themselves This methodology opposes mapping preconfigured philosophical concepts and values onto these films as too many philosophical approaches to cinema have done silencing the philosophies uniquely articulated by these films in the interest of making them ventriloquize philosophies

advanced elsewhere The chapters of this book trace three modes of the in between that function philosophically in American avant garde cinema the material the dimensional and the conceptual Although the chapters are organized around discrete aesthetic and philosophical preoccupations that unify several filmmakers these three presentations of the in between cut through all the chapters allowing the subjects of each to converse over the course of the book

**Hidden Hands and Divided Landscapes** Anoma Pieris,2009-02-26 During the nineteenth century the colonial Straits Settlements of Singapore Penang and Melaka were established as free ports of British trade in Southeast Asia and proved attractive to large numbers of regional migrants Following the abolishment of slavery in 1833 the Straits government transported convicts from the East India Company s Indian presidencies to the settlements as a source of inexpensive labor The prison became the primary experimental site for the colonial plural society and convicts were graduated by race and the labor needed for urban construction Hidden Hands and Divided Landscapes investigates how a political system aimed at managing ethnic communities in the larger material context of the colonial urban project was first imagined and tested through the physical segregation of the colonial prison It relates the story of a city Singapore and a contemporary city state whose plural society has its origins in these historical divisions A description of the evolution of the ideal plan for a plural city across the three settlements is followed by a detailed look at Singapore s colonial prison Chapters trace the prison s development and its dissolution across the urban landscape through the penal labor system The author demonstrates the way

in which racial politics were inscribed spatially in the division of penal facilities and how the map of the city was reconfigured through convict labor. Later chapters describe penal resistance first through intimate stories of penal life and then through a discussion of organized resistance in festival riots. Eventually the plural city ideal collapsed into the hegemonic urban form of the citadel where a quite different military vision of the city became evident. *Hidden Hands and Divided Landscapes* is a fascinating and thoroughly original study in urban history and the making of multiethnic society in Singapore. It will compel readers to rethink the ways in which colonial urban history, postcolonial urbanism and governance have been theorized by scholars and represented by governments. *New Challenges in Computational Collective Intelligence* Radoslaw

Katarzyniak, Adam Janiak, 2009-09-29. Collective intelligence has become one of major research issues studied by today's and future computer science. Computational collective intelligence is understood as this form of group intellectual activity that emerges from collaboration and competition of many artificial individuals. Robotics, artificial intelligence, artificial cognition and group working try to create efficient models for collective intelligence in which it emerges from sets of actions carried out by more or less intelligent individuals. The major methodological, theoretical and practical aspects underlying computational collective intelligence are group decision making, collective action coordination, collective competition and knowledge description, transfer and integration. Obviously the application of multiple computational technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, knowledge representation etc. is necessary to create new forms of computational collective intelligence and support existing ones. Three subfields of application of computational technologies to support forms of collective intelligence are of special attention to us. The first one is semantic web treated as an advanced tool that increases the collective intelligence in networking environments. The second one covers social networks modeling and analysis where social networks are this area of in which various forms of computational collective intelligence emerges in a natural way. The third subfield relates us to agent and multi-agent systems understood as this computational and modeling paradigm which is especially tailored to capture the nature of computational collective intelligence in populations of autonomous individuals. Advances on Broadband and Wireless Computing, Communication and Applications Leonard Barolli, Fang-Yie Leu, Tomoya Enokido, Hsing-Chung Chen, 2018-10-18. This book presents on the latest research findings and innovative research methods and development techniques related to the emerging areas of broadband and wireless computing from both theoretical and practical perspectives. Information networking is evolving rapidly with various kinds of networks with different characteristics emerging and being integrated into heterogeneous networks. As a result a number of interconnection problems can occur at different levels of the communicating entities and communication networks hardware and software design. These networks need to manage an increasing usage demand, provide support for a significant number of services, guarantee their QoS and optimize the network resources. The success of all IP networking and wireless technology has changed the way of life for people around the world and the advances in

electronic integration and wireless communications will pave the way for access to the wireless networks on the fly This in turn means that all electronic devices will be able to exchange the information with each other in a ubiquitous way whenever necessary
