The Ascent of Birds John Reilly, 2018-04-16 When and where did the ancestors of modern birds evolve What enabled them to survive the meteoric impact that wiped out the dinosaurs How did these early birds spread across the globe and give rise to the 10 600 plus species we recognise today from the largest ratites to the smallest hummingbirds Based on the latest scientific discoveries and enriched by personal observations The Ascent of Birds sets out to answer these fundamental questions The Ascent of Birds is divided into self contained chapters or stories that collectively encompass the evolution of modern birds from their origins in Gondwana over 100 million years ago to the present day The stories are arranged in chronological order from tinamous to tanagers and describe the many dispersal and speciation events that underpin the world s 10 600 plus species Although each chapter is spearheaded by a named bird and focuses on a specific evolutionary mechanism the narrative will often explore the relevance of such events and processes to evolution in general The book starts with The Tinamou s Story which explains the presence of flightless birds in South America Africa and Australasia and dispels the cherished role of continental drift as an explanation for their biogeography It also introduces the concept of neoteny an evolutionary trick that enabled dinosaurs to become birds and humans to conquer the planet The Vegavis s Story explores the evidence for a Cretaceous origin of modern birds and why they were able to survive the asteroid collision that saw the demise not only of dinosaurs but of up to three quarters of all species The Duck s Story switches to sex why have so few species retained the ancestral copulatory organ Or put another way why do most birds exhibit the paradoxical phenomenon of penis loss despite all species requiring internal

fertilisation The Hoatzin's Story reveals unexpected oceanic rafting from Africa to South America a stranger than fiction means of dispersal that is now thought to account for the presence of other South American vertebrates including geckos and monkeys The latest theories underpinning speciation are also explored The Manakin's Story for example reveals how South America's extraordinarily rich avifauna has been shaped by past geological oceanographic and climatic changes while The Storm Petrel's Story examines how species can evolve from an ancestral population despite inhabiting the same geographical area The thorny issue of what constitutes a species is discussed in The Albatross's Story while The Penguin's Story explores the effects of environment on phenotype in the case of the Emperor penguin the harshest on the planet Recent genomic advances have given scientists novel approaches to explore the distant past and have revealed many unexpected journeys including the unique overland dispersal of an early suboscine from Asia to South America The Sapayoa's Story and the blackbird's ancestral sweepstakes dispersals across the Atlantic The Thrush's Story Additional vignettes update more familiar concepts that encourage speciation sexual selection The Bird of Paradise's Story extended phenotypes The Bowerbird's Story hybridisation The Sparrow's Story and great speciators The White eye's Story Finally the book explores the raft of recent publications that help explain the evolution of cognitive skills The Crow's Story plumage colouration The Starling's Story and birdsong The Finch's Story
