Model Theoretic Algebra With Particular Emphasis On Fields Rings Modules:

Model Theoretic Algebra With Particular Emphasis on Fields, Rings, Modules Christian. U Jensen, Helmut Lenzing, 1989-07-26 Looks like a text and a handsome one at that but the authors prefer to describe their creation as notes intended to acquaint graduate students with the power of the most basic principles of model theory by applying them to classical questions in algebra Thirteen chapters the last given to the enumeration of some open problems plus tables and several appendices bibliography NW Annotation copyrighted by Book News Inc Portland OR *Model Theoretic Algebra With Particular Emphasis on Fields, Rings, Modules* Christian.U Jensen, 2022-03-10 This volume highlights the links between model theory and algebra The work contains a definitive account of algebraically compact modules a topic of central importance for both module and model theory Using concrete examples particular emphasis is given to model theoretic concepts such as axiomizability Pure mathematicians especially algebraists ring theorists logicians model theorists and representation theorists should find this an absorbing and stimulating book *Advances in Algebra and Model Theory* M Droste, R. Gobel, 2019-08-16 Contains 25 surveys in algebra and model theory all written by leading experts in the field The surveys are based around talks given at conferences held in Essen 1994 and Dresden 1995 Each contribution is written in such a way as to highlight the ideas that were discussed at the conferences and also to stimulate open research problems in a form accessible to the whole mathematical community The topics include field and ring theory as well as groups ordered algebraic structure and their relationship to model theory Several papers deal with infinite permutation groups abelian groups modules and their relatives and representations Model theoretic aspects include quantifier elimination in skew fields Hilbert's 17th problem $\aleph_0$ categorical structures and Boolean algebras Moreover symmetry questions and automorphism groups of orders are covered This work contains 25 surveys in algebra and model theory each is written in such a way as to highlight the ideas that were discussed at Conferences and also to stimulate open research problems in a form accessible to the whole mathematical community **Theory of Generalized Inverses Over Commutative Rings** K.P.S. Bhaskara Rao, 2002-03-21 The theory of generalized inverses of real or complex matrices has been expertly developed and documented But the generalized inverses of matrices over rings have received comprehensive treatment only recently In this book the author who contributed to the research and development of the theory explains his results The subject of generalized inverses of matrices over rings has now reached a state suitable for a comprehensive treatment this book provides just that for mathematicians algebraists and control theorists *Infinite Length Modules* Henning Krause, Claus Michael Ringel, 2000 This book is concerned with the role played by modules of infinite length when dealing with problems in the representation theory of groups and algebras but also in topology and geometry it shows the intriguing interplay between finite and infinite length modules The volume presents the invited lectures of a conference devoted to Infinite Length Modules held at Bielefeld in September 1998 which brought together experts from quite different schools in order to survey surprising relations

between algebra topology and geometry Some additional reports have been included in order to establish a unified picture The collection of articles written by well known experts from all parts of the world is conceived as a sort of handbook which provides an easy access to the present state of knowledge and its aim is to stimulate further development *Introduction to Model Theory* Philipp Rothmaler, 2018-12-07 Model theory investigates mathematical structures by means of formal languages So called first order languages have proved particularly useful in this respect This text introduces the model theory of first order logic avoiding syntactical issues not too relevant to model theory In this spirit the compactness theorem is proved via the algebraically useful ultraproduct technique rather than via the completeness theorem of first order logic This leads fairly quickly to algebraic applications like Malcev's local theorems of group theory and after a little more preparation to Hilbert's Nullstellensatz of field theory Steinitz dimension theory for field extensions is obtained as a special case of a much more general model theoretic treatment of strongly minimal theories There is a final chapter on the models of the first order theory of the integers as an abelian group Both these topics appear here for the first time in a textbook at the introductory level and are used to give hints to further reading and to recent developments in the field such as stability or classification theory

Algebra, K-Theory, Groups, and Education Hyman Bass, Tsit-Yuen Lam, Andy R. Magid, 1999 This volume includes expositions of key developments over the past four decades in commutative and non commutative algebra algebraic K theory infinite group theory and applications of algebra to topology Many of the articles are based on lectures given at a conference at Columbia University honoring the 65th birthday of Hyman Bass Important topics related to Bass's mathematical interests are surveyed by leading experts in the field Of particular note is a professional autobiography of Professor Bass and an article by Deborah Ball on mathematical education The range of subjects covered in the book offers a convenient single source for topics in the field

Noncommutative Curves of Genus Zero Dirk Kussin, 2009-08-07 In these notes the author investigates noncommutative smooth projective curves of genus zero also called exceptional curves As a main result he shows that each such curve $\mathbb{A}^1$ admits up to some weighting a projective coordinate algebra which is a not necessarily commutative graded factorial domain R in the sense of Chatters and Jordan Moreover there is a natural bijection between the points of $\mathbb{A}^1$ and the homogeneous prime ideals of height one in R and these prime ideals are principal in a strong sense

Distributive Modules and Related Topics Askar Tuganbaev, 1999-08-19 A comprehensive introduction to the homological and structural methods of ring theory and related topics this book includes original results as well as the most recent work in the field It is unique in that it concentrates on distributive modules and rings an area in which the author is recognized as one of the world's leading experts A module is said to be distributive if the lattice of its submodules is distributive Distributive rings are exemplified by factor rings of direct products of division rings commutative semihereditary rings and uniserial rings Direct sums of distributive modules are studied in detail as well as relations with flat modules and modules whose endomorphisms could be extended or lifted Starting from a basic understanding of linear

algebra the theory is presented and accompanied by complete proofs A number of exercises are also included to give further insight into the topics covered and to draw attention to relevant results in the literature This detailed and comprehensive book will be an invaluable source of reference to researchers and specialists in this area

Trends in Representation Theory of Algebras and Related Topics Andrzej Skowroński, 2008 This book is concerned with recent trends in the representation theory of algebras and its exciting interaction with geometry topology commutative algebra Lie algebras quantum groups homological algebra invariant theory combinatorics model theory and theoretical physics The collection of articles written by leading researchers in the field is conceived as a sort of handbook providing easy access to the present state of knowledge and stimulating further development The topics under discussion include diagram algebras Brauer algebras cellular algebras quasi hereditary algebras Hall algebras Hecke algebras symplectic reflection algebras Cherednik algebras Kashiwara crystals Fock spaces preprojective algebras cluster algebras rank varieties varieties of algebras and modules moduli of representations of quivers semi invariants of quivers Cohen Macaulay modules singularities coherent sheaves derived categories spectral representation theory Coxeter polynomials Auslander Reiten theory Calabi Yau triangulated categories Poincaré duality spaces selfinjective algebras periodic algebras stable module categories Hochschild cohomologies deformations of algebras Galois coverings of algebras tilting theory algebras of small homological dimensions representation types of algebras and model theory This book consists of fifteen self contained expository survey articles and is addressed to researchers and graduate students in algebra as well as a broader mathematical community They contain a large number of open problems and give new perspectives for research in the field
