Modeling In The Neurosciences:

Modeling in the Neurosciences G. N. Reeke, R.R. Poznanski, K. A. Lindsay, J.R. Rosenberg, O. Sporns, 2005-03-29
Computational models of neural networks have proven insufficient to accurately model brain function mainly as a result of simplifications that ignore the physical reality of neuronal structure in favor of mathematically tractable algorithms and rules Even the more biologically based integrate and fire and compartmental styles of modeling suffer from oversimplification in the former case and excessive discretization in the second This book introduces an integrative approach to modeling neurons and neuronal circuits that retains the integrity of the biological units at all hierarchical levels *Modeling in the Neurosciences* R.R. Poznanski, 2019-01-22 With contributions from more than 40 renowned experts *Modeling in the Neurosciences* From Ionic Channels to Neural Networks is essential for those interested in neuronal modeling and quantitative neuroscience Focusing on new mathematical and computer models techniques and methods this monograph represents a cohesive and comprehensive treatment **An Introduction to Model-Based Cognitive Neuroscience** Birte U. Forstmann, Eric-Jan Wagenmakers, 2015-04-20 Two recent innovations the emergence of formal cognitive models and the addition of cognitive neuroscience data to the traditional behavioral data have resulted in the birth of a new interdisciplinary field of study model based cognitive neuroscience Despite the increasing scientific interest in model based cognitive neuroscience few active researchers and even fewer students have a good knowledge of the two constituent disciplines The main goal of this edited collection is to promote the integration of cognitive modeling and cognitive neuroscience Experts in the field will provide tutorial style chapters that explain particular techniques and highlight their usefulness through concrete examples and numerous case studies The book will also include a thorough list of references pointing the reader towards additional literature and online resources *Modeling in the Neurosciences* G. N. Reeke, 2004 Computational models of neural networks have proven insufficient to accurately model brain function mainly as a result of simplifications that ignore the physical reality of neuronal structure in favor of mathematically tractable algorithms and rules Even the more biologically based integrate and fire and compartmental styles of modeling suffer from oversimplification in the former case and excessive discretization in the second This book introduces an integrative approach to modeling neurons and neuronal circuits that retains the integrity of the biological units at all hierarchical levels *Principles of Computational Modelling in Neuroscience* David Sterratt, Bruce Graham, Andrew Gillies, Gaute Einevoll, David Willshaw, 2023-10-05 Taking a step by step approach to modelling neurons and neural circuitry this textbook teaches students how to use computational techniques to understand the nervous system at all levels using case studies throughout to illustrate fundamental principles Starting with a simple model of a neuron the authors gradually introduce neuronal morphology synapses ion channels and intracellular signalling This fully updated new edition contains additional examples and case studies on specific modelling techniques suggestions on different ways to use this book and new chapters covering plasticity modelling extracellular influences on brain circuits modelling experimental measurement processes and choosing appropriate model structures and their parameters The online resources offer exercises and simulation code that recreate many of the book's figures allowing

students to practice as they learn. Requiring an elementary background in neuroscience and high school mathematics, this is an ideal resource for a course on computational neuroscience.

Time Series Modeling of Neuroscience Data Tohru Ozaki, 2012-01-26 Recent advances in brain science measurement technology have given researchers access to very large scale time series data such as EEG/MEG data (20 to 100 dimensional) and fMRI (140,000 dimensional) data. To analyze such massive data, efficient computational and statistical methods are required. *Time Series Modeling of Neuroscience Data* shows how to

Dynamic Neuroscience Zhe Chen, Sridevi V. Sarma, 2017-12-27 This book shows how to develop efficient quantitative methods to characterize neural data and extract information that reveals underlying dynamics and neurophysiological mechanisms. Written by active experts in the field, it contains an exchange of innovative ideas among researchers at both computational and experimental ends, as well as those at the interface. Authors discuss research challenges and new directions in emerging areas with two goals in mind: to collect recent advances in statistics, signal processing, modeling, and control methods in neuroscience; and to welcome and foster innovative or cross-disciplinary ideas along this line of research and discuss important research issues in neural data analysis. Making use of both tutorial and review materials, this book is written for neural electrical and biomedical engineers, computational neuroscientists, statisticians, computer scientists, and clinical engineers.

Validating Neuro-Computational Models of Neurological and Psychiatric Disorders Basabdatta Sen

Bhattacharya, Fahmida N. Chowdhury, 2015-10-30 This book is a collection of articles by leading researchers working at the cutting edge of neuro computational modelling of neurological and psychiatric disorders Each article contains model validation techniques used in the context of the specific problem being studied Validation is essential for neuro inspired computational models to become useful tools in the understanding and treatment of disease conditions Currently the immense diversity in neuro computational modelling approaches for investigating brain diseases has created the need for a structured and coordinated approach to benchmark and standardise validation methods and techniques in this field of research This book serves as a step towards a systematic approach to validation of neuro computational models used for studying brain diseases and should be useful for all neuro computational modellers
