Modeling Reserve Recruiting:

Modeling Reserve Recruiting Jeremy Arkes, M. Rebecca Kilburn, 2005 As reserve forces have become more important to military operations reserve recruiting has faced many of the same challenges that have confronted recruiting for the active forces These include more attractive civilian opportunities and a declining propensity among youth to join the ranks of military service An additional challenge for the reserves is the shrinking active duty force from which the reserves draw two thirds of their members Despite the growing importance of the reserves research on reserve recruiting has received much less attention than active duty recruiting For about two decades researchers estimated models of active duty recruiting variously referred to as enlistment supply models or aggregate recruiting models These models typically examine how labor market factors demographic factors and recruiting policies influence enlistment in the active duty Given the growing importance of reserve recruiting the Office of the Secretary of Defense asked RAND to assess the feasibility of this type of estimating model for reserve recruiting In the first portion of this effort we reviewed trends in reserve recruiting and the civilian factors that influence recruiting and we recommended updates to the active duty models of enlistment supply based on the reserve recruiting process and these trends These results are currently unpublished RAND research by M Rebecca Kilburn Sheila Nataraj Kirby C Christine Fair and Scott Nafrel In this monograph we describe available data and the strategies we used to create models to estimate reserve recruiting report the results from the models and discuss the policy implications of the estimates

Dynamic Modeling Bruce Hannon, Matthias Ruth, 2013-11-11 Computer models offer a means of interpreting and analyzing the dynamics of real world systems ranging from population growth to ozone depletion Dynamic Modeling introduces an approach to modeling that makes it a more practical intuitive endeavor The book enables readers to convert their understanding of a phenomenon to a computer model and then to run the model and let it yield the inevitable dynamic consequences built into the structure of the model Dynamic Modeling uses STELLA II software to develop simulation models Part I provides an introduction to modeling dynamic systems Part II offers general methods for modeling Parts III through VIII apply these methods to model real world phenomena from chemistry genetics ecology economics and engineering To develop and execute dynamic simulation models Dynamic Modeling comes with STELLA II run time software for Windows based computers as well as computer files of sample models used in the book Dynamic Modeling offers a clear approachable introduction to the modeling process and will be of interest in any field where real problems can be illuminated by computer simulation

Recruiting Minorities Beth J. Asch, Paul Heaton, Bogdan Savych, 2009-09-08 Since 2000 black representation among high quality recruits in the Army has decreased while Hispanic representation has increased in the Navy black representation has remained stable and Hispanic representation has increased The authors identify factors that explain these trends and consider which policies are likely to be most effective in increasing high quality enlistments among black Hispanic and white youth

A CBO Study: Recruiting, Retention, and Future Levels of Military Personnel,

October 2006 ,2006 **Recruiting, Retention, and Future Levels of Military Personnel** Heidi L. W. Golding,2006

Deployed Michael Craig Musheno,Susan M. Ross,2009-04-03 The stories of the citizen soldiers of an Army Reserve unit who were among the first wave of reservists mobilized after September 11 **A Policy Analysis of Reserve Retirement Reform** Beth J. Asch,James R. Hosek,Michael G. Mattock,2013 As the burden of defense borne by reserve forces has increased more attention has been paid to differences between the compensation systems for the reserve and active components One particular emphasis is on the retirement systems a key difference being that reserve members who complete 20 years must wait until age 60 to draw benefits whereas active members can draw benefits immediately upon discharge This monograph compares the reserve and active retirement systems discusses the importance of structuring compensation to enable flexibility in managing active and reserve manpower describes how the debate over reserve retirement reform has differed from active component retirement reform debate and considers obstacles to reform and how they might be overcome It also provides a quantitative assessment of several past congressional proposals to change the reserve retirement system in terms of their effects on reserve participation and personnel costs concluding that proposals to reduce the age at which eligible members may begin receiving retirement benefits are not cost effective means of sustaining or increasing reserve component retention It also concludes that a menu of member options can be a powerful tool to maintain morale and overcome obstacles to reform Current members could be given the choice of staying in the current retirement system or joining the new one and the choice might be offered over a period of time say five years New entrants and reentrants with few years of service might be placed under the new system *Modeling Large Woody Debris Recruitment for Small Streams of the Central Rocky Mountains* Don C. Bragg,2000 As our understanding of the importance of large woody debris LWD evolves planning for its production in riparian forest management is becoming more widely recognized This report details the development of a model CWD version 1 4 that predicts LWD inputs including descriptions of the field sampling used to parameterize parts of the model the theoretical and practical underpinnings of the model s structure and a case study of CWD s application to a stream in Wyoming s Bridger Teton National Forest Coral Reef Fishes Peter F. Sale,2006-07-20 Coral Reef Fishes is the successor of The Ecology of Fishes on Coral Reefs This new edition includes provocative reviews covering the major areas of reef fish ecology Concerns about the future health of coral reefs and recognition that reefs and their fishes are economically important components of the coastal oceans of many tropical nations have led to enormous growth in research directed at reef fishes This book is much more than a simple revision of the earlier volume it is a companion that supports and extends the earlier work The included syntheses provides readers with the current highlights in this exciting science An up to date review of key research areas in reef fish ecology with a bibliography including hundreds of citations most from the last decade Authoritative and provocative chapters written to suggest future research priorities Includes discussions of regulation of fish populations dispersal or site fidelity of larval reef fishes sensory

and motor capabilities of reef fish larvae and complexities of management of reef species and communities **Modeling**
Cost and Performance for Military Enlistment National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Military Enlistment Standards, 1994-02-01 This book describes a cost performance trade off model useful for illustrating the effects of budget decisions on the quality of expected performance in the military enlisted force The model links recruit quality to job performance on the one hand and personnel costs on the other Understanding these linkages provides a clear rationale based on performance and cost differences for choosing applicants for military service The book examines trends in the quality of military personnel from the beginning of the All Volunteer Force in 1974 to the year 2000 and beyond It discusses technical issues associated with the development of the various components of both cost and performance linkages and presents applications of the fully developed model
