Modeling Experimental and Observational Data Clifford E. Lunneborg, 1994 Straightforward and accessible this book shows students how modeling is a useful and powerful tool in the applied sciences Lunneborg's unique approach emphasizes understanding concepts through examples rather than rote computation Includes A data analytic and model building approach Modern and comprehensive treatment of simple multiple and logistic regression and the analysis of variance A focus on application and concepts rather than mathematical computation Mastering SPSS -A Comprehensive Guide To Data Analysis And Statistical Modeling Prof. N. K. Chadha, Mastering SPSS A Comprehensive Guide to Data Analysis and Statistical Modeling is a non fiction educational book that provides a detailed and practical guide to using SPSS for data analysis and statistical modeling It covers key statistical concepts techniques for organizing and analyzing data performing hypothesis testing regression analysis and interpreting results The book is designed for students researchers and professionals in social sciences business and related fields offering step by step instructions examples and practical tips to effectively apply statistical methods using SPSS software Practical Application Offers step by step instructions and examples for performing analyses in SPSS Data Management Teaches how to organize clean and manipulate datasets effectively Interpretation of Results Guides readers on understanding SPSS output and drawing meaningful conclusions Learning Approach Combines theoretical explanations with hands on practice for practical learning Statistical Techniques Covers descriptive statistics hypothesis testing regression analysis ANOVA correlation and more **Data Analysis Using Regression and Multilevel/Hierarchical Models** Andrew Gelman, Jennifer Hill, 2007 This book first published in 2007 is for the applied researcher performing data analysis using linear and nonlinear regression and multilevel models

Agent-based Models and Causal Inference Gianluca Manzo, 2022-01-28 Agent based Models and Causal Inference Scholars of causal inference have given little credence to the possibility that ABMs could be an important tool in warranting causal claims Manzo's book makes a convincing case that this is a mistake The book starts by describing the impressive progress that ABMs have made as a credible methodology in the last several decades It then goes on to compare the inferential threats to ABMs versus the traditional methods of RCTs regression and instrumental variables showing that they have a common vulnerability of being based on untestable assumptions The book concludes by looking at four examples where an analysis based on ABMs complements and augments the evidence for specific causal claims provided by other methods Manzo has done a most convincing job of showing that ABMs can be an important resource in any researcher's tool

kit Christopher Winship Diker Tishman Professor of Sociology Harvard University USA Agent based Models and Causal Inference is a first rate contribution to the debate on and practice of causal claims With exemplary rigor systematic precision and pedagogic clarity this book contrasts the assumptions about causality that undergird agent based models experimental methods and statistically based observational methods discusses the challenges these methods face as far as inferences go and in light of this discussion elaborates the case for combining these methods respective strengths a remarkable achievement Ivan Ermakoff Professor of Sociology University of Wisconsin Madison USA Agent based models are a uniquely powerful tool for understanding how patterns in society may arise in often surprising and counter intuitive ways This book offers a strong and deeply reflected argument for how ABM s can do much more add to actual empirical explanation The work is of great value to all social scientists interested in learning how computational modelling can help unraveling the complexity of the real social world Andreas Flache Professor of Sociology at the University of Groningen Netherlands Agent based Models and Causal Inference is an important and much needed contribution to sociology and computational social science The book provides a rigorous new contribution to current understandings of the foundation of causal inference and justification in the social sciences It provides a powerful and cogent alternative to standard statistical causal modeling approaches to causation Especially valuable is Manzo s careful analysis of the conditions under which an agent based simulation is relevant to causal inference The book represents an exceptional contribution to sociology the philosophy of social science and the epistemology of simulations and models Daniel Little Professor of philosophy University of Michigan USA Agent based Models and Causal Inference delivers an insightful investigation into the conditions under which different quantitative methods can legitimately hold to be able to establish causal claims The book compares agent based computational methods with randomized experiments instrumental variables and various types of causal graphs Organized in two parts Agent based Models and Causal Inference connects the literature from various fields including causality social mechanisms statistical and experimental methods for causal inference and agent based computation models to help show that causality means different things within different methods for causal analysis and that persuasive causal claims can only be built at the intersection of these various methods Readers will also benefit from the inclusion of A thorough comparison between agent based computation models to randomized experiments instrumental variables and several types of causal graphs A compelling argument that observational and experimental methods are not qualitatively superior to simulation based methods in their ability to establish causal claims Practical discussions of how statistical experimental and computational methods can be combined to produce reliable causal inferences Perfect for academic social scientists and scholars in the fields of computational social science philosophy statistics experimental design and ecology Agent based Models and Causal Inference will also earn a place in the libraries of PhD students seeking a one stop reference on the issue of causal inference in agent based computational models

Analyzing Within-subjects Experiments John W. Cotton,2013-05-13 Most behavioral scientists know two important concepts how to analyze continuous data from randomly assigned treatment groups of subjects and how to assess practice effects for a single group of subjects given a constant treatment at each of several stages of practice However except in the case of the repeated measures Latin square design researchers are not facile in analyzing data from different subjects receiving different treatments at various times in an experiment This book helps fill the void [Experimental Design and Data Analysis for Biologists](#) Gerald Peter Quinn,Michael J. Keough,2002-03-21 An essential textbook for any student or researcher in biology needing to design experiments sample programs or analyse the resulting data The text begins with a revision of estimation and hypothesis testing methods covering both classical and Bayesian philosophies before advancing to the analysis of linear and generalized linear models Topics covered include linear and logistic regression simple and complex ANOVA models for factorial nested block split plot and repeated measures and covariance designs and log linear models Multivariate techniques including classification and ordination are then introduced Special emphasis is placed on checking assumptions exploratory data analysis and presentation of results The main analyses are illustrated with many examples from published papers and there is an extensive reference list to both the statistical and biological literature The book is supported by a website that provides all data sets questions for each chapter and links to software [MATHEMATICAL MODELS - Volume I](#) Jerzy A.
