Modeling of Dynamic Systems Lennart Ljung, Torkel Glad, 1994 Written by a recognized authority in the field of identification and control this book draws together into a single volume the important aspects of system identification AND physical modelling KEY TOPICS Explores techniques used to construct mathematical models of systems based on knowledge from physics chemistry biology etc e g techniques with so called bond graphs as well those which use computer algebra for the modeling work Explains system identification techniques used to infer knowledge about the behavior of dynamic systems based on observations of the various input and output signals that are available for measurement Shows how both types of techniques need to be applied in any given practical modeling situation Considers applications primarily simulation MARKET For practicing engineers who are faced with problems of modeling

Advances in Aerospace Guidance, Navigation and Control Bogusław Dołęga,Robert Głębocki,Damian Kordos,Marcin Żugaj,2017-12-15 The first three CEAS Council of European Aerospace Societies Specialist Conferences on Guidance Navigation and Control CEAS EuroGNC were held in Munich Germany in 2011 in Delft Netherlands in 2013 and in Toulouse France in 2017 The Warsaw University of Technology WUT and the Rzeszow University of Technology RzUT accepted the challenge of jointly organizing the 4th edition The conference aims to promote scientific and technical excellence in the fields of Guidance Navigation and Control GNC in aerospace and other fields of technology The Conference joins together the industry with the academia research This book covers four main topics Guidance and Control Control Theory Application Navigation UAV Control and Dynamic The papers included focus on the most advanced and actual topics in guidance navigation and control research areas Control theory analysis and design Novel navigation estimation and tracking methods Aircraft spacecraft missile and UAV guidance navigation and control Flight testing and experimental results Intelligent control in aerospace applications Aerospace robotics and unmanned autonomous systems Sensor systems for guidance navigation and control Guidance navigation and control concepts in air traffic control systems For the 4th CEAS Specialist Conference on Guidance Navigation and Control the International Technical Committee established a formal review process Each paper was reviewed in compliance with good journal practices by independent and anonymous reviewers At the end of the review process papers were selected for publication in this book

Identification of Dynamic Systems Rolf Isermann,Marco Münchhof,2010-11-22 Precise dynamic models of processes are required for many applications ranging from control engineering to the natural sciences and economics Frequently such precise models cannot be derived using theoretical considerations alone Therefore they must be determined experimentally This book treats the determination of dynamic models based on measurements taken at the process which is known as system identification or process identification Both offline and online methods are presented i e methods that post process the measured data as well as methods that provide models during the measurement The book is theory oriented and application oriented and most methods covered have been used successfully in practical applications for many different processes Illustrative examples in this book with real measured data range from hydraulic and electric actuators up to combustion engines Real experimental data is also provided on the Springer webpage allowing readers to gather their first

experience with the methods presented in this book Among others the book covers the following subjects determination of the non parametric frequency response fast Fourier transform correlation analysis parameter estimation with a focus on the method of Least Squares and modifications identification of time variant processes identification in closed loop identification of continuous time processes and subspace methods Some methods for nonlinear system identification are also considered such as the Extended Kalman filter and neural networks The different methods are compared by using a real three mass oscillator process a model of a drive train For many identification methods hints for the practical implementation and application are provided The book is intended to meet the needs of students and practicing engineers working in research and development design and manufacturing

Computational Intelligence for Modelling, Control & Automation

Masoud Mohammadian,1999 This edited Book is dedicated to the theory and applications of Evolutionary Computation and Fuzzy Logic for Intelligent Control Knowledge Acquisition and Information Retrieval The book consists of 86 selected research papers from the 1999 International Conference on Computational Intelligence for Modelling Control and Automation CIMCA 99 The research papers presented in this book cover new techniques and applications in the following research areas Evolutionary Computation Fuzzy Logic and Expert Systems with their applications for Optimisation Learning Control Scheduling and Multi Criteria Analysis as well as Reliability Assessment Information Retrieval and Knowledge Acquisition

Automating Data-Driven Modelling of Dynamical Systems Dhruv Khandelwal,2022-02-03 This book describes a user friendly evolutionary algorithms based framework for estimating data driven models for a wide class of dynamical systems including linear and nonlinear ones The methodology addresses the problem of automating the process of estimating data driven models from a user s perspective By combining elementary building blocks it learns the dynamic relations governing the system from data giving model estimates with various trade offs e g between complexity and accuracy The evaluation of the method on a set of academic benchmark and real word problems is reported in detail Overall the book offers a state of the art review on the problem of nonlinear model estimation and automated model selection for dynamical systems reporting on a significant scientific advance that will pave the way to increasing automation in system identification
