Modelling Water Flow in Unsaturated Porous Media Adam Szymkiewicz, 2012-10-11 The book focuses on two issues related to mathematical and numerical modelling of flow in unsaturated porous media In the first part numerical solution of the governing equations is discussed with particular emphasis on the spatial discretization of highly nonlinear permeability coefficient The second part deals with large scale flow in heterogeneous porous media of binary structure Upscaled models are developed and it is shown that the presence of material heterogeneities may give rise to additional non equilibrium terms in the governing equations or to hysteresis in the averaged constitutive relationships

The Petroleum Engineering Handbook M.R. Islam, M.I. Khan, 2013-11-25 This is the first book in the petroleum sector that sheds light on the real obstacles to sustainable development and provides solutions to each problem encountered Each solution is complete with an economic analysis that clarifies why petroleum operations can continue with even greater profit than before while ensuring that the negative environmental impact is diminished The new screening tools and models proposed in this book will provide one with proper guidelines to achieve true sustainability in both technology development and management of the petroleum sector
