Leonardo Franco, José M. Jerez

Modelling Identification And Control Mic 1999 Innsbruck:

Constructive Neural Networks Leonardo Franco, José M. Jerez, 2009-10-27 This book presents a collection of invited works that consider constructive methods for neural networks taken primarily from papers presented at a special session held during the 18 International Conference on Artificial Neural Networks ICANN 2008 in September 2008 in Prague Czech Republic The book is devoted to constructive neural networks and other incremental learning algorithms that constitute an alternative to the standard method of finding a correct neural architecture by trial and error These algorithms provide an incremental way of building neural networks with reduced topologies for classification problems Furthermore these techniques produce not only the multilayer topologies but the value of the connecting synaptic weights that are determined automatically by the constructing algorithm avoiding the risk of becoming trapped in local minima as might occur when using gradient descent algorithms such as the popular back propagation In most cases the convergence of the constructing algorithms is guaranteed by the method used Constructive methods for building neural networks can potentially create more compact and robust models which are easily implemented in hardware and used for embedded systems Thus a growing amount of current research in neural networks is oriented towards this important topic The purpose of this book is to gather together some of the leading investigators and research groups in this growing area and to provide an overview of the most recent advances in the techniques being developed for constructive neural networks and their applications

Multiple Criteria Optimization Xavier Gandibleux, 2006-04-11 The generalized area of multiple criteria decision making MCDM can be defined as the body of methods and procedures by which the concern for multiple conflicting criteria can be formally incorporated into the analytical process MCDM consists mostly of two branches multiple criteria optimization and multi criteria decision analysis MCDA While MCDA is typically concerned with multiple criteria problems that have a small number of alternatives often in an environment of uncertainty location of an airport type of drug rehabilitation program multiple criteria optimization is typically directed at problems formulated within a mathematical programming framework but with a stack of objectives instead of just one river basin management engineering component design product distribution It is about the most modern treatment of multiple criteria optimization that this book is concerned I look at this book as a nicely organized and well rounded presentation of what I view as new wave topics in multiple criteria optimization Looking back to

the origins of MCDM most people agree that it was not until about the early 1970s that multiple criteria optimization coalesced as a field. At this time and for about the following fifteen years the focus was on theories of multiple objective linear programming that subsume conventional single criterion linear programming algorithms for characterizing the efficient set, theoretical vector maximum developments and interactive procedures. *Modelling, Identification and Control* International Association of Science and Technology for Development, 1984.
