Modeling And Advanced Techniques In Modern Economics Cagdas Hakan Aladag, Nihan Potas, 2022-08-03 In the modern world data is a vital asset for any organization regardless of industry or size The world is built upon data However data without knowledge is useless The aim of this book briefly is to introduce new approaches that can be used to shape and forecast the future by combining the two disciplines of Statistics and Economics Readers of Modeling and Advanced Techniques in Modern Economics can find valuable information from a diverse group of experts on topics such as finance econometric models stochastic financial models and machine learning and application of models to financial and macroeconomic data

Lectures on Nonlinear Dynamics José Roberto Castilho Piqueira, Carlos Eduardo Nigro Mazzilli, Celso Pupo Pesce, Guilherme Rosa Franzini, 2023-11-29 This book presents a compilation of lectures delivered at the S o Paulo School of Advanced Sciences on Nonlinear Dynamics categorized into four groups parametric resonance nonlinear modal analysis and model reduction synchronization and strongly nonlinear dynamics Interwoven seamlessly these groups cover a wide range of topics from fundamental concepts to practical applications catering to both introductory and advanced readers The first group consisting of chapters 1 and 2 serves as an introduction to the theory of parametric resonance and the dynamics of parametrically excited slender structures Chapters 3 4 and 5 form the second group offering insights into normal forms nonlinear normal modes and nonlinear system identification Chapters 6 and 7 delve into asynchronous modes of structural vibration and master slave topologies for time signal distribution within synchronous systems respectively representing the third group Finally the last four chapters tackle the fourth group exploring nonlinear dynamics of variable mass oscillators advanced analytical methods for strong nonlinear vibration problems chaos theory and dynamic integrity from the perspectives of safety and design This book harmoniously combines theoretical depth and practical relevance to provide a comprehensive understanding of nonlinear dynamics

Complexity in Economics: Cutting Edge Research Marisa Faggini, Anna Parziale, 2014-06-26 In this book leading experts discuss innovative components of complexity theory and chaos theory in economics The underlying perspective is that investigations of economic phenomena should view these phenomena not as deterministic predictable and mechanistic but rather as process dependent organic and always evolving The aim is to highlight the exciting potential of this approach in economics and its ability to overcome the limitations of past

research and offer important new insights The book offers a stimulating mix of theory examples and policy By casting light on a variety of topics in the field it will provide an ideal platform for researchers wishing to deepen their understanding and identify areas for further investigation

Extracting Knowledge From Time Series Boris P. Bezruchko,Dmitry A.

Smirnov,2010-09-03 Mathematical modelling is ubiquitous Almost every book in exact science touches on mathematical models of a certain class of phenomena on more or less specific approaches to construction and investigation of models on their applications etc As many textbooks with similar titles Part I of our book is devoted to general questions of modelling Part II reflects our professional interests as physicists who spent much time to investigations in the field of non linear dynamics and mathematical modelling from discrete sequences of experimental measurements time series The latter direction of research is known for a long time as system identification in the framework of mathematical statistics and automatic control theory It has its roots in the problem of approximating experimental data points on a plane with a smooth curve Currently researchers aim at the description of complex behaviour irregular chaotic non stationary and noise corrupted signals which are typical of real world objects and phenomena with relatively simple non linear differential or difference model equations rather than with cumbersome explicit functions of time In the second half of the twentieth century it has become clear that such equations of a sufficiently low order can exhibit non trivial solutions that promise sufficiently simple modelling of complex processes according to the concepts of non linear dynamics chaotic regimes can be demonstrated already by a third order non linear ordinary differential equation while complex behaviour in a linear model can be induced either by random influence noise or by a very high order of equations
