Grady Hanrahan

Modelling Large Systems:

Modelling of Pollutants in Complex Environmental Systems Grady Hanrahan, 2009 This title showcases modern environmental modelling methods the basic theory behind them and their incorporation into complex environmental investigations *Formal Methods for the Quantitative Evaluation of Collective Adaptive Systems* Marco Bernardo, Rocco De Nicola, Jane Hillston, 2016-06-10 This book presents 8 tutorial lectures given by leading researchers at the 16th edition of the International School on Formal Methods for the Design of Computer Communication and Software Systems SFM 2016 held in Bertinoro Italy in June 2016 SFM 2016 was devoted to the Quantitative Evaluation of Collective Adaptive Systems and covered topics such as self organization in distributed systems scalable quantitative analysis spatio temporal models and aggregate programming **Modeling Complex Living Systems** Nicola Bellomo, 2007-10-05

The subject of this book is the modeling of complex systems in the life sciences constituted by a large number of interacting entities called active particles Their physical state includes in addition to geometrical and mechanical variables a variable called the activity which characterizes the specific living system to be modeled Interactions among particles not only modify the microscopic state but may generate proliferative and or destructive phenomena The aim of the book is to develop mathematical methods and tools even a new mathematics for the modeling of living systems The background idea is that the modeling of living systems requires technically complex mathematical methods which may be substantially different from those used to deal with inert matter The first part of the book discusses methodological issues namely the derivation of various general mathematical frameworks suitable to model particular systems of interest in the applied sciences The second part presents the various models and applications The mathematical approach used in the book is based on mathematical kinetic theory for active particles which leads to the derivation of evolution equations for a one particle distribution function over the microscopic state Two types of equations to be regarded as a general mathematical framework for deriving the models are derived corresponding to short and long range interactions

Computational Methods in Systems Biology Ezio Bartocci, Pietro Lio, Nicola Paoletti, 2016-09-03 This book constitutes the refereed proceedings of the 14th International Conference on Computational Methods in Systems Biology CMSB 2016 held in Cambridge UK in September 2016 The 20 full papers 3 tool papers and 9 posters presented were carefully reviewed and selected from 37 regular paper submissions The topics include formalisms for modeling biological processes models and their biological applications frameworks for model verification validation analysis and simulation of biological systems high performance computational systems biology and parallel implementations model inference from experimental data model integration from biological databases multi scale modeling and analysis methods and computational approaches for synthetic biology **Modelling of Nuclear Reactor**

Multi-physics Christophe Demazière, 2019-11-19 Modelling of Nuclear Reactor Multiphysics From Local Balance Equations to Macroscopic Models in Neutronics and Thermal Hydraulics is an accessible guide to the advanced methods used to model

nuclear reactor systems The book addresses the frontier discipline of neutronic thermal hydraulic modelling of nuclear reactor cores presenting the main techniques in a generic manner and for practical reactor calculations The modelling of nuclear reactor systems is one of the most challenging tasks in complex system modelling due to the many different scales and intertwined physical phenomena involved The nuclear industry as well as the research institutes and universities heavily rely on the use of complex numerical codes All the commercial codes are based on using different numerical tools for resolving the various physical fields and to some extent the different scales whereas the latest research platforms attempt to adopt a more integrated approach in resolving multiple scales and fields of physics The book presents the main algorithms used in such codes for neutronic and thermal hydraulic modelling providing the details of the underlying methods together with their assumptions and limitations Because of the rapidly expanding use of coupled calculations for performing safety analyses the analysts should be equally knowledgeable in all fields i e neutron transport fluid dynamics heat transfer The first chapter introduces the book s subject matter and explains how to use its digital resources and interactive features The following chapter derives the governing equations for neutron transport fluid transport and heat transfer so that readers not familiar with any of these fields can comprehend the book without difficulty The book thereafter examines the peculiarities of nuclear reactor systems and provides an overview of the relevant modelling strategies Computational methods for neutron transport first at the cell and assembly levels then at the core level and for one two phase flow transport and heat transfer are treated in depth in respective chapters The coupling between neutron transport solvers and thermal hydraulic solvers for coarse mesh macroscopic models is given particular attention in a dedicated chapter The final chapter summarizes the main techniques presented in the book and their interrelation then explores beyond state of the art modelling techniques relying on more integrated approaches Covers neutron transport fluid dynamics and heat transfer and their interdependence in one reference Analyses the emerging area of multi physics and multi scale reactor modelling Contains 71 short videos explaining the key concepts and 77 interactive quizzes allowing the readers to test their understanding

will appeal to biologists engineers computer scientists mathematicians and others Computer Aided Design of Multivariable Technological Systems G. G. Leininger, 2014-05-16 Computer Aided Design of Multivariable Technological Systems covers the proceedings of the Second International Federation of Automatic Control IFAC The book reviews papers that discuss topics about the use of Computer Aided Design CAD in designing multivariable system such as theoretical issues applications and implementations The book tackles several topics relevant to the use of CAD in designing multivariable systems Topics include quasi classical approach to multivariable feedback system designs fuzzy control for multivariable systems root loci with multiple gain parameters multivariable frequency domain stability criteria and computational algorithms for pole assignment in linear multivariable systems The text will be of great use to professionals whose work involves designing and implementing multivariable systems

Mathematical Modeling in Science and Engineering Ismael Herrera, George F. Pinder, 2012-03-13 A powerful unified approach to mathematical and computational modeling in science and engineering Mathematical and computational modeling makes it possible to predict the behavior of a broad range of systems across a broad range of disciplines This text guides students and professionals through the axiomatic approach a powerful method that will enable them to easily master the principle types of mathematical and computational models used in engineering and science Readers will discover that this axiomatic approach not only enables them to systematically construct effective models it also enables them to apply these models to any macroscopic physical system Mathematical Modeling in Science and Engineering focuses on models in which the processes to be modeled are expressed as systems of partial differential equations It begins with an introductory discussion of the axiomatic formulation of basic models setting the foundation for further topics such as Mechanics of classical and non classical continuous systems Solute transport by a free fluid Flow of a fluid in a porous medium Multiphase systems Enhanced oil recovery Fluid mechanics Throughout the text diagrams are provided to help readers visualize and better understand complex mathematical concepts A set of exercises at the end of each chapter enables readers to put their new modeling skills into practice There is also a bibliography in each chapter to facilitate further investigation of individual topics Mathematical Modeling in Science and Engineering is ideal for both students and professionals across the many disciplines of science and engineering that depend on mathematical and computational modeling to predict and understand complex systems
