Identification and Other Probabilistic Models Rudolf Ahlswede, 2021-06-22 The sixth volume of Rudolf Ahlswede's lectures on Information Theory is focused on Identification Theory. In contrast to Shannon's classical coding scheme for the transmission of a message over a noisy channel, in the theory of identification the decoder is not really interested in what the received message is but only in deciding whether a message which is of special interest to him has been sent or not. There are also algorithmic problems where it is not necessary to calculate the solution but only to check whether a certain given answer is correct. Depending on the problem, this answer might be much easier to give than finding the solution. Easier in this context means using fewer resources like channel usage, computing time, or storage space. Ahlswede and Dueck's main result was that in contrast to transmission problems where the possible code sizes grow exponentially fast with block length, the size of identification codes will grow doubly exponentially fast. The theory of identification has now developed into a sophisticated mathematical discipline with many branches and facets forming part of the Post Shannon theory, in which Ahlswede was one of the leading experts. New discoveries in this theory are motivated both by concrete engineering problems and by explorations of the inherent properties of the mathematical structures. Rudolf Ahlswede wrote: "It seems that the whole body of present-day Information Theory will undergo serious revisions and some dramatic expansions. In this book, we will open several directions of future research and start the mathematical description of communication models in great generality. For some specific problems, we provide solutions or ideas for their solutions. The lectures presented in this work, which consists of 10 volumes, are suitable for graduate students in Mathematics and also for those working in Theoretical Computer Science, Physics, and Electrical Engineering with a background in basic Mathematics. The lectures can be used as the basis for courses or to supplement courses in many ways. Ph.D. students will also find research problems, often with conjectures that offer potential subjects for a thesis. More advanced researchers may find questions which form the basis of entire research programs. The book also contains an afterword by Gunter Dueck." **Hillstrom's Multichannel Secrets** ,

Operating System Security Trent Jaeger, 2022-05-31 Operating systems provide the fundamental mechanisms for

securing computer processing Since the 1960s operating systems designers have explored how to build secure operating systems whose mechanisms protect the system against a motivated adversary Recently the importance of ensuring such security has become a mainstream issue for all operating systems In this book we examine past research that outlines the requirements for a secure operating system and research that implements example systems that aim for such requirements For system designs that aimed to satisfy these requirements we see that the complexity of software systems often results in implementation challenges that we are still exploring to this day However if a system design does not aim for achieving the secure operating system requirements then its security features fail to protect the system in a myriad of ways We also study systems that have been retrofit with secure operating system features after an initial deployment In all cases the conflict between function on one hand and security on the other leads to difficult choices and the potential for unwise compromises From this book we hope that systems designers and implementors will learn the requirements for operating systems that effectively enforce security and will better understand how to manage the balance between function and security Table of Contents Introduction Access Control Fundamentals Multics Security in Ordinary Operating Systems Verifiable Security Goals Security Kernels Securing Commercial Operating Systems Case Study Solaris Trusted Extensions Case Study Building a Secure Operating System for Linux Secure Capability Systems Secure Virtual Machine Systems System Assurance **Cryptology and Network Security** Dimitris Gritzalis, Aggelos Kiayias, Ioannis Askoxylakis, 2014-10-17

This book constitutes the refereed proceedings of the 13th International Conference on Cryptology and Network Security CANS 2014 held in Heraklion Crete Greece in October 2014 The 25 revised full papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 86 submissions The papers cover topics of interest such as encryption cryptanalysis malware analysis and privacy and identification systems as well as various types of network protocol design and analysis work **Neural Information Processing** Tom Gedeon, Kok Wai Wong, Minhoo Lee, 2019-12-10

Machine learning ML models especially large pretrained deep learning DL models are of high economic value and must be properly protected with regard to intellectual property rights IPR Model watermarking methods are proposed to embed watermarks into the target model so that in the event it is stolen the model's owner can extract the pre-defined watermarks to assert ownership Model

watermarking methods adopt frequently used techniques like backdoor training multi task learning decision boundary analysis etc to generate secret conditions that constitute model watermarks or fingerprints only known to model owners These methods have little or no effect on model performance which makes them applicable to a wide variety of contexts In terms of robustness embedded watermarks must be robustly detectable against varying adversarial attacks that attempt to remove the watermarks The efficacy of model watermarking methods is showcased in diverse applications including image classification image generation image captions natural language processing and reinforcement learning This book covers the motivations fundamentals techniques and protocols for protecting ML models using watermarking Furthermore it showcases cutting edge work in e g model watermarking signature and passport embedding and their use cases in distributed federated learning settings
