The Physics of Atoms and Quanta Hermann Haken, Hans Christoph Wolf, 2012-12-06. Since a new edition of our book has once again become necessary, we have as before taken the opportunity to include the latest developments in atomic and quantum physics. These areas continue to yield new and fascinating experimental and theoretical results which are of fundamental importance and are also extremely interesting to students of science. As a result of newly developed experimental methods and theoretical techniques it has also become possible to find solutions to some long established problems. In this spirit we have added an entire new chapter dealing with entangled wavefunctions, the Einstein Podolsky Rosen paradox, Bell's inequalities, the paradox of Schrodinger's cat and the concept of decoherence. In addition we have treated new ideas relating to quantum computers and the numerous quantum physical schemes for constructing them. These new concepts exemplify the rapidly developing area of quantum information. Finally in this new chapter we have included the

experimental realisation of the Bose Einstein condensation and of the atom laser which promise important new applications In Chap 22 Modern methods of optical spectroscopy we have added a new section on nondestructive photon detection as an example of efficient methods for investigating the interactions between atoms and photons in resonant cavities Considering the current importance of these areas we emphasize references to the original literature These can be found in the Bibliography *Modern Atomic Physics* Bernard Cagnac, Jean Claude Pebay-Peyroula, 1975 The Masked Maverick the toughest wrestler in his league tries to gain popularity with the booing crowd by revealing the sweetness of his true nature
