Thierauf, 2001-06-30 One step above knowledge management systems are business intelligence systems Their purpose is to give decision makers a better understanding of their organization's operations and thus another way to outmaneuver the competition by helping to find and extract the meaningful relationships trends and correlations that underlie the organization's operations and ultimately contribute to its success Thierauf also shows that by tying critical success factors and key performance indicators into business intelligence systems an organization's most important financial ratios can also be improved Comprehensive and readable Thierauf's book will advance the knowledge and skills of all information systems providers and users It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of executive business systems generally and specifically their creation and management The theme underlying Thierauf's unique text is that a

thorough understanding of a company's operations is crucial if the company is to be moved to a higher level of competitive advantage. Although data warehousing, data mining, the Internet, the World Wide Web, and other electronic aids have been in place for at least a decade, it is the remarkable and unique capability of business intelligence systems to utilize them that has in turn revolutionized the ability of decision makers to find, accumulate, organize, and access a wider range of information than was ever before possible. Effective business intelligence systems give decision makers a means to keep their fingers on the pulse of their businesses every step of the way. From this it follows that they are thus able to develop new, more workable means to cope with the competition successfully. Comprehensive and readable, Thierauf's book will advance the knowledge and skills of all information systems providers and users. It will also be useful as a text in upper level courses covering a wide range of topics essential to an understanding of executive business systems generally and specifically their creation and management.

GIS and Multicriteria Decision Analysis Jacek Malczewski, 1999-04-05 Wohin baut man neue Schulen und Fabriken? Wie verwaltet man Flüsse und Wälder? Wo sollen Autobahnen und Brücken verlaufen? Bei derartigen Fragen, die in der Regel mehrere alternative Antworten zulassen, entscheiden häufig konkurrierende Interessengruppen mit unterschiedlichen Wertvorstellungen, die zwangsläufig zu Konflikten führen. Einen formalen Ansatz zur Lösung dieser Probleme, der auf der Auswertung von Material fußt, das ein Geographisches Informationssystem bietet, stellt dieses Buch vor. Mit vielen Beispielen und einem Überblick über erhältlichliche Software. 05-99

The Development of an Integrated Planning and Decision Support System (IPDSS) for Land Consolidation Demetris Demetriou, 2013-11-01 This book provides an extensive review of three interrelated issues: land fragmentation, land consolidation, and land reallocation, and it presents in detail the theoretical background, design, development, and application of a prototype integrated planning and decision support system for land consolidation. The system integrates geographic information systems (GIS) and artificial intelligence techniques, including expert systems (ES) and genetic algorithms (GAs) with multi-criteria decision methods (MCDM), both multi-attribute MADM and multi-objective MODM. The system is based on four modules for measuring land fragmentation, automatically generating alternative land redistribution plans, evaluating those plans, and automatically designing the land partitioning plan. The presented research provides a new scientific framework for land consolidation planning, both in terms of theory and practice, by presenting new findings and by developing better tools and methods embedded in an integrated GIS environment. It also makes a valuable contribution to the fields of GIS and spatial planning, as it provides new methods and ideas that could be applied to improve the former for the benefit of the latter in the context of planning support systems. From the 1960s, ambitious research activities set out to observe regarding IT

support of the complex and time consuming redistribution processes within land consolidation without any practically relevant results until now This scientific work is likely to close that gap This distinguished publication is highly recommended to land consolidation planning experts researchers and academics alike Prof Dr Ing Joachim Thomas Münster Germany

Planning support systems take new scientific tools based on GIS optimisation and simulation and use these to inform the process of plan making and policy This book is one of the first to show how this can be consistently done and it is a triumph of demonstrating how such systems can be made operational Essential reading for planners analysts and GI scientists Prof Michael Batty University College London
