Modern Architectural Theory A Historical Survey 1673 1968:

Modern Architectural Theory Harry Francis Mallgrave, 2009-07-13 *Modern Architectural Theory* is the first book to provide a comprehensive survey of architectural theory primarily in Europe and the United States during three centuries of development. In this synthetic overview, Harry Mallgrave examines architectural discourse within its social and political context. He explores the philosophical and conceptual evolution of its ideas, discusses the relation of theory to the practice of building, and most importantly, considers the words of the architects themselves as they contentiously shaped Western architecture. He also examines the compelling currents of French rationalist and British empiricist thought, radical reformation of the theory during the Enlightenment, the intellectual ambitions and historicist debates of the nineteenth century, and the distinctive varieties of modern theory in the twentieth century up to the profound social upheaval of the 1960s. *Modern Architectural Theory* challenges many assumptions about architectural modernism and uncovers many new dimensions of the debates about modernism.

Modern Architectural Theory Harry Francis Mallgrave, 2005-04-18 Examines architectural discourse within its social and political context. Explores the philosophical and conceptual evolution of its ideas, discusses the relation of theory to the practice of building, and considers the words of the architects themselves as they shaped Western architecture.

Modern Architecture: A Very Short Introduction Adam Sharr, 2018-11-15 Somewhere between 1910 and 1970, architecture changed. Now that modern architecture has become familiar, sometimes celebrated, sometimes vilified, it's hard to imagine how novel it once seemed. Expensive buildings were transformed from ornamental fancies which referred to the classical and medieval pasts into strikingly plain reflections of novel materials, functions, and technologies. Modern architecture promised the transformation of cities from overcrowded conurbations characterised by packed slums and dirty industries to spacious realms of generous housing and clean mechanised production set in parkland. At certain times and in certain cultures, it stood for the liberation of the future from the past. This *Very Short Introduction* explores the technical innovations that opened up the cultural and intellectual opportunities for modern architecture to happen. Adam Sharr shows how the invention of steel and reinforced concrete radically altered possibilities for shaping buildings, transforming what architects were able to imagine, as did new systems for air conditioning and lighting. While architects weren't responsible for these innovations, they were among the first to appreciate how they could make the world look and feel different in connection with imagery from other spheres like modern art and industrial design. Focusing on a selection of modern buildings that also symbolize bigger cultural ideas, Sharr discusses what modern architecture was like, why it was like that, and how it was imagined. Considering the work of some of the historians and critics who helped to shape modern architecture, he demonstrates how the field owes as much to its storytellers as to its buildings.

ABOUT THE SERIES

The *Very Short Introductions* series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts

box This book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories

The Architecture of Influence Amanda Reeser

Lawrence,2023-11-21 How do we create the new from the old The Architecture of Influence explores this fundamental question by analyzing a broad swath of twentieth century architectural works including some of the best known examples of the architectural canon modern and postmodern through the lens of influence The book serves as both a critique of the discipline s long standing focus on genius and a celebration of the creative act of revisioning and reimagining the past It argues that all works of architecture not only depend on the past but necessarily alter rewrite and reposition the traditions and ideas to which they refer Organized into seven chapters Replicas Copies Compilations Generalizations Revivals Emulations and Self Repetitions the book redefines influence as an active process through which the past is defined recalled and subsequently redefined within twentieth century architecture

Building Theories Franca Trubiano,2022-11-25

Building Theories speaks to the value of words in architecture It addresses the author s fascination with the voices of architects engineers builders and craftspeople whose ideas about building have been captured in text It discusses the content of treatises essays articles and letters by those who have been throughout history committed to the art of building In this Building Theories argues for the return of a practice of architectural theory that is set amongst building buildings and builders This journey of close reading reinterprets the words of Vitruvius Alberti de L Orme Le Camus de M zi res Boull e Laugier Rondelet Semper Viollet le Duc H bsch B tticher Berlage Muthesius Wagner Behrendt Gropius and Arup With chapters dedicated to texts from antiquity the Renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the Anglo Saxon world post 1968 readers are introduced to a wider more inclusive definition of architectural ideas Building Theories considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns In response it argues for a realignment of architecture with the concept of techn with a dual commitment to fabrica e ratio with a productive return to l art de bien bastir with the accurate translation of the term Baukunst and with an appeal to the architect s composite mind

Students practitioners and educators will identify in Building Theories ways of thinking that strive for the integration of design with construction reject the supposed primacy of the former over the latter recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and accept without reservation that material transformations have always been at the origins of built form *The Routledge Handbook of Religion and American Culture* Chad E.
