Modern Colorants Synthesis And Structure:

Modern Colorants: Synthesis and Structure A.T. Peters, H.S. Freeman, 2014-02-19 Although the research activities of dyestuff chemists worldwide have been influenced to a great extent in recent years by the need to respond to a variety of environmental issues associated with the manufacture and application of synthetic dyes and pigments a significant level of targeted research continues to be devoted to new chemistry aimed at enhancing the technical properties of dyes in commerce This book is a presentation of various aspects of basic research conducted during the past decade but not reported in the recent review literature The coverage herein is unique in that it emphasizes systematic approaches commonly utilized in the design and synthesis of dyes and pigments and the required intermediates While it is well known that certain transition metals are important in the synthesis of technically viable metallized dyes for polyamide and protein fibers these metals are demonstrated in Chapter 1 also to be effective agents in the regiospecific placement of substituents into azo compounds The scope and limitations of this chemistry are presented In other synthetic work a description of the different processes employed to produce the major families of reactive dyes is presented In Chapter 4 special attention is given to reactive dyes containing more than one reactive group and to the more recent developments in the field The two chapters which follow provide a review of the recent literature pertaining to novel chromophores and dyes for the D2T2 process respectively

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes

and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration *Chromic Phenomena* Peter Bamfield, 2007-10-31 Chromic phenomena or those produced by materials which exhibit colour in response to a chemical or physical stimulus have increasingly been at the heart of high tech developments in a variety of fields in the last decade Many of the newer technologies which are at the cutting edge of research are multi disciplinary involving researchers from areas as diverse as physics biology materials science and electronic engineering Chromic Phenomena covers five main areas Colour change materials such as photochromic thermochromic and electrochromic materials Materials which absorb and reflect light the classical dyes and pigments Luminescent phenomena including phosphorescence fluorescence and electroluminescence Materials which absorb light and transfer energy eg photosensitisers infra red absorbers and laser addressable compounds Phenomena involving the manipulation of light by chemicals such as liquid crystals lustre pigments optoelectronics and photonics Providing an entry point both for new researchers and for established ones this book with its emphasis on the technological applications of these chromic phenomena develops and investigates new applications for colour chemistry It will be of interest to industrialists and professionals in the biological medicinal electronics telecommunications and colorant industries as well as academics in these fields

Chemistry of the Textiles Industry C. Carr, 1995-05-31 The manufacture and processing of textiles is a complex and essential industry requiring many diverse skills to ensure profitability New products are continually being developed and reflect the energy and innovation of those working in the field This book focuses on the technological aspects of the chemical processing of textiles and on the modifications necessary for specific work environments Coverage ranges from fibre structure and its relationship to tensile properties textile aesthetics comfort physiology and end use performance through to the effect of domestic processing by the consumer on the textile product The industry is constantly under environmental pressure and the book examines the nature of environmental control and the development of alternative technology to produce less environmental impact In order to provide a balanced view of the current situation authors have been drawn from academia research institutes and industry to produce a text that will be useful to both industrial readers and university students In conclusion I would like to thank the authors for their dedication and their contributions

Biologically Active Natural Products Debarshi Kar Mahapatra, Swati Gokul Talele, Tatiana G. Volova, A. K. Haghi, 2020-12-23 Biologically active natural products and their substructures have long been valuable starting points for medicinal chemistry and drug discovery This new volume explores biologically active natural products and their use in microbial technologies and as phyto pharmaceuticals in drug development It presents detailed scientific principles and recent research on applications of nanotechnology in diagnostics and drug delivery Topics include pharmacotherapeutically active proteins and peptides the biotechnological potential of hydrogen oxidizing bacteria synthesis and production synthetic colorants pigments dyes and lakes and more The use of various plants is discussed in several chapters including Artemisia

Asteraceae Abutilon indicum Prosopis juliflora Acacia arabica Aloe barbadensis Tabermontana divaricate Linn among others With the information presented in Biologically Active Natural Products Microbial Technologies and Phyto Pharmaceuticals in Drug Development scientists faculty and graduate students will gain a unique insight into nanotechnology and natural pharmaceuticals today with practical implementation in various industrial sectors

Chromic Phenomena Michael Hutchings, Peter Bamfield, 2010-02-12 Chromic phenomena or those produced by materials which exhibit colour in response to a chemical or physical stimulus have increasingly been at the heart of high tech developments in a variety of fields in the last decade Many of the newer technologies which are at the cutting edge of research are multi disciplinary involving researchers from areas as diverse as physics biology materials science and electronic engineering Chromic Phenomena covers five main areas Colour change materials such as photochromic thermochromic and electrochromic materials Materials which absorb and reflect light the classical dyes and pigments Luminescent phenomena including phosphorescence fluorescence and electroluminescence Materials which absorb light and transfer energy eg photosensitisers infra red absorbers and laser addressable compounds Phenomena involving the manipulation of light by chemicals such as liquid crystals lustre pigments optoelectronics and photonics Providing an entry point both for new researchers and for established ones this book with its emphasis on the technological applications of these chromic phenomena develops and investigates new applications for colour chemistry It will be of interest to industrialists and professionals in the biological medicinal electronics telecommunications and colorant industries as well as academics in these fields

Chromic Phenomena 3rd Edition Peter Bamfield, Michael Hutchings, 2018-08-24 Chromic or colour related phenomena are produced in response to a chemical or physical stimulus This new edition will update the information on all those areas where chemicals or materials interact with light to produce colour a colour change or luminescence especially in the imaging analysis lighting and display areas The book has been restructured to show greater emphasis on applications where coloured compounds are used to transfer energy or manipulate light in some way therefore reducing the details on classical dyes and pigments In the past eight years since the previous edition there has been a remarkable increase in the number of papers and reviews being produced reflecting the growth of interest in this area This ongoing research interest is matched by a large number of new technological applications gaining commercial value covering e g biomedical areas energy data storage physical colour bio inspired materials and photonics This book appeals to industrial chemists professionals postgraduates and as high level recommended reading for colour technology courses
