planning specific studies within therapeutic or disease areas
 BRITISH JOURNAL OF SURGERY Vol 92 No 2 February 2005
 The book's main concept is to describe the impact of clinical trials on the practice of medicine. It separates the information by therapeutic area because the impact of clinical trials, the problems encountered, and the numbers of trials in existence vary tremendously from specialty to specialty. The sections provide a background to the disease area and general clinical trial methodology before concentrating on particular problems experienced in that area. Specific examples are used throughout to address these issues. The Textbook of Clinical Trials Second Edition Highlights the various ways clinical trials have influenced the practice of medicine in many therapeutic areas. Describes the challenges posed by those conducting clinical trials over a range of medical specialities and allied fields. Additional therapeutic areas are included in this Second Edition to fill gaps in the First Edition as the number and complexity of trials increases in this rapidly developing area. Newly covered or updated in the Second Edition: general surgery, plastic surgery, aesthetic surgery, palliative care, primary care, anaesthesia, and pain, transfusion, wound healing, maternal and perinatal health, early termination, organ transplants, ophthalmology, epilepsy, infectious disease, neuro oncology, adrenal, thyroid, and urological cancers, as well as a chapter on the Cochrane network. An invaluable resource for pharmaceutical companies, the Textbook of Clinical Trials Second Edition appeals to those working in contract research organizations, medical departments, and in the area of public health and health science alike. **A TEXTBOOK ON QUALITY IMPROVEMENT AND PATIENT SAFETY IN ANESTHESIA AND SURGICAL CARE** Dr. Zuber M.
