Nonlinear Evolution Equations and Dynamical Systems Yi Cheng, 2003 Fast paced economic growth in Southeast Asia from the late 1960s until the mid 1990s brought increased attention to the overseas Chinese as an economically successful diaspora and their role in this economic growth Events that followed such as the transfer of Hong Kong and Macau to the People's Republic of China the election of a non KMT government in Taiwan the Asian economic crisis and the plight of overseas Chinese in Indonesia as a result and the durability of the Singapore economy during this same crisis have helped to sustain this attention The study of the overseas Chinese has by now become a global enterprise raising new theoretical problems and empirical challenges New case studies of overseas Chinese such as those on communities in North America Cuba India and South Africa continually unveil different perspectives New kinds of transnational connectivities

linking Chinese communities are also being identified. It is now possible to make broader generalizations of a Chinese diaspora on a global basis. Further, the intensifying study of the overseas Chinese has stimulated renewed intellectual vigor in other areas of research. The transnational and transregional activities of overseas Chinese, for example, pose serious challenges to analytical concepts of regional divides such as that between East and Southeast Asia. Despite the increased attention, new data and the changing theoretical paradigms, basic questions concerning the overseas Chinese remain. The papers in this volume seek to understand the overseas Chinese migrants not just in terms of the overall Chinese diaspora *per se* but also local Chinese migrants adapting to local societies in different national contexts.

NEEDS 92 was held in Dubna, Russia, in July 1992. This set of proceedings compiles the lectures and short contributions on the soliton theory and its applications presented during the conference. The topics covered included the most recent results on relevant problems of nonlinear evolution systems such as Multidimensional Integrable Systems, Geometric and Algebraic Methods, Painlevé Property, Lie Backlund Symmetries, Spectral Methods, Solitons and Coherent Structures, Computational Methods, Quantum Field and String Theories, Nonlinear Optics and Hydrodynamics, Condensed Matter, etc. The extent of coverage for these important topics makes this book useful, informative, and insightful for the mathematics and theoretical physics community, both the senior researchers and those just entering the field.

Proceedings of the ICM 2002 Satellite Conference Yi Cheng, 2003. This book contains the papers presented at the ICM2002 Satellite Conference on Nonlinear Evolution Equations and Dynamical Systems. About 50 mathematicians and scientists attended the meeting, including E. Witten (IAS), C. Nappi (Princeton), K. Khanin (Cambridge), D. Phong (Columbia), D. Hoker (UCLA), and Peng Chiakuei (CAS). The book covers several fields such as nonlinear evolution equations and integrable systems, infinite-dimensional algebra, conformal field theory, and geometry. The proceedings have been selected for coverage in *Index to Scientific Technical Proceedings*, *ISTP CDROM version*, *ISI Proceedings*.
