Nonlinear Ordinary Differential Equations And Their Applications:

Nonlinear Ordinary Differential Equations and Their Applications P.L. Sachdev, 1990-11-30 Presents simple analytic methods which are readily accessible for use in applications These include transformations phase plane analysis integral equation formulation shooting arguments local and asymptotic analysis singular point analysis and others The applications reflecting the research

Green's Functions in the Theory of Ordinary Differential Equations Alberto Cabada, 2013-11-29 This book provides a complete and exhaustive study of the Green's functions Professor Cabada first proves the basic properties of Green's functions and discusses the study of nonlinear boundary value problems Classic methods of lower and upper solutions are explored with a particular focus on monotone iterative techniques that flow from them In addition Cabada proves the existence of positive solutions by constructing operators defined in cones The book will be of interest to graduate students and researchers interested in the theoretical underpinnings of boundary value problem solutions

Ordinary Differential Equations with Applications Carmen Chicone, 2006-09-23 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the series Texts in Applied Mathematics TAM

The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics Thus the purpose of this textbook series is to meet the current and future needs of these advances and to encourage the teaching of new courses TAM will publish textbooks suitable for use in advanced

undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs Pasadena California J E Marsden New York New York L Sirovich College Park Maryland S S Antman Preface This book is based on a two semester course in ordinary differential equations that I have taught to graduate students for two decades at the University of Missouri The scope of the narrative evolved over time from an embryonic collection of supplementary notes through many classroom tested revisions to a treatment of the subject that is suitable for a year or more of graduate study

Inverse Scattering Problems and Their Application to Nonlinear Integrable Equations Pham Loi Vu, 2023-05-15 Inverse Scattering Problems and Their Applications to Nonlinear Integrable Equations Second Edition is devoted to inverse scattering problems ISPs for differential equations and their applications to nonlinear evolution equations NLEEs The book is suitable for anyone who has a mathematical background and interest in functional analysis differential equations and equations of mathematical physics This book is intended for a wide community working with ISPs and their applications There is an especially strong traditional community in mathematical physics In this monograph the problems are presented step by step and detailed proofs are given for

considered problems to make the topics more accessible for students who are approaching them for the first time New to the Second Edition All new chapter dealing with the B cklund transformations between a common solution of both linear equations in the Lax pair and the solution of the associated IBVP for NLEEs on the half line Updated references and concluding remarks Features Solving the direct and ISP then solving the associated initial value problem IVP or initial boundary value problem IBVP for NLEEs are carried out step by step The unknown boundary values are calculated with the help of the Lax generalized equations then the time dependent scattering data SD are expressed in terms of preassigned initial and boundary conditions Thereby the potential functions are recovered uniquely in terms of the given initial and calculated boundary conditions The unique solvability of the ISP is proved and the SD of the scattering problem is described completely The considered ISPs are well solved The ISPs are set up appropriately for constructing the B ckhund transformations BTs for solutions of associated IBVPs or IVPs for NLEEs The procedure for finding a BT for the IBVP for NLEEs on the half line differs from the one used for obtaining a BT for non linear differential equations defined in the whole space The interrelations between the ISPs and the constructed BTs are established to become new powerful unified transformations UTs for solving IBVPs or IVPs for NLEEs that can be used in different areas of physics and mechanics The application of the UTs is consistent and efficiently embedded in the scheme of the associated ISP
