

WHAT IS REALISM?

Realism is an artistic and literary movement that emerged in the 19th century. It sought to represent reality truthfully and accurately, focusing on everyday life and ordinary people.

Realism rejected idealized depictions of the world and emphasized observation and direct experience. The movement aimed to portray society and human experience without romanticism or exaggeration, and often dealt with themes such as social injustice, poverty, and working-class life.

Realism had a significant impact on literature, painting, and other art forms, and remains an influential approach to storytelling and representation today.

Realism In Our Time:

Relativity In Our Time Mendel Sachs, 2018-10-08 Relativity In our Time is a book concerning the relevance of Einstein's theory to human relations in contemporary times. It is physics and it is philosophy. It is a discussion about one of the greatest of all pillars of 20th century thought and science. Based on a seminar course for a mixture of science and humanities students, the approach and narrative style leads the reader towards the frontier of thinking in this far-reaching subject. Sachs deals with the whole spread of relativity starting from the early history of Galileo and Faraday; he arrives at the foundation of the special theory. There is a logical transition to the general theory while the last part of the book covers the mind-testing realms of unified field theory, Mach's principle and cosmology. The book begins with atomistic deterministic classical physics and goes on towards a view of continuous fields of matter and a clearer view of spacetime. The reader is led into Einstein's extension of this theory towards a unified force field; consequently, the authors address the issue of the validity of linear mathematics compared with the realism of a non-linear universe. Such arguments today are leading towards a new paradigm in science: a study and description of nonlinear natural systems, especially far from equilibrium systems, their energetics and dynamics. This book should be of value to postgraduates, undergraduates, secondary students and professionals in physics and philosophy and anyone with an interest in science subjects.

The Restructuring of Capitalism in Our Time William K. Tabb, 2012 Actions taken by the United States and other countries during the Great Recession focused on restoring the viability of major financial institutions while guaranteeing debt and stimulating growth. Once the markets stabilized, the United States enacted regulatory reforms that ultimately left basic economic structures unchanged. At the same time, the political class pursued austerity measures to curb the growing national debt. Drawing on the economic theories of Keynes and Minsky and applying them to the modern evolution of American banking and finance, William K. Tabb offers a chilling prediction about future crises and the structural factors inhibiting true reform. Tabb follows the rise of banking practices and financial motives in America over the past thirty years and the simultaneous growth of a shadow industry of hedge funds, private equity firms and financial innovations such as derivatives. He marks the shift from an American economy based primarily on the production of goods and nonfinancial services to one characterized by financialization, then shows how these developments' perspectives and approaches not only contributed to the recent financial crisis but also prevented the enactment of effective regulatory reform. He incisively analyzes the damage that increasing unsustainable debt and excessive risk-taking has done to our financial system and expands his critique to a discussion of world systems and globalization. Revealing the willful blind spots of mainstream finance theory, Tabb moves beyond an economic model reliant on debt expansion and dangerous levels of leverage, proposing instead a social structure of accumulation that places economic justice over profit and more practically institutes an inclusive sustainable model for growth.

Calvino and the Age of Neorealism, 1990-08 Italo Calvino's reputation as one of the great writers of our century

rests chiefly on his allegorical fables and fantastic narratives whose inventiveness irreverence and elegant style are universally admired In this study the author focuses on Calvino s first novel The Path to the Nest of Spiders 1947 because in it she discerns a critical point of origin for Calvino s entire ethics of writing She shows how in The Path he challenges the poetics of objectivity of the Italian neorealists movement and offers a complex and ironic representation of the anti Fascist armed resistance in Italy Situating Calvino s early work in its historical and cultural context the author reassesses Italian neorealism in terms of the theories and critical debates about realism of such critics as Lukacs Sartre Brecht Adorno and Barthes She analyzes neorealism s narrative practices and cultural and political implications while setting neorealism in the context of the resistance and the postwar Reconstruction in Italy and giving readings of major neorealist texts novels by Pavese and Vittorini films by Rossellini Visconti and others as well as relatively obscure minor ones The heart of the book consists of readings of The Path from four different but intersecting critical perspectives formalist narratological sociohistorical psychoanalytic and Bakhtinian The readings assess the importance of Calvino s beginnings for the body of his work and incorporate relevant references to his later fiction and critical essays Out of these multiple readings the ironic estrangement of the real through the act of writing itself emerges as his key narratological strategy
