Rebuilding The Body Organ Transplantation:

Rebuilding the Body Ann Fullick, 2009-01-01 Delves inside the human body to show how our major organs and specialized cells work what happens when they don't and how they can be replaced Publisher **Organ Transplants** Tina P. Schwartz, 2005-04-20 This is a one of a kind book that addresses the issue of what it's like to be involved with an organ transplant procedure It's filled with real life stories of teens whose parents siblings or other family members are transplant recipients as well as teens who have had transplants themselves and includes stories of recipients who have received heart liver kidney pancreas and double lung transplants This book describes the physical and emotional ups and downs that are part of the transplant process It addresses from both the recipient's and family's point of view what it feels like to be placed on the transplant list to wait for an organ to receive false alarm calls to come to the transplant center to finally undergo the transplant operation to recover to deal with setbacks of surgery and organ rejection and to live on anti rejection drugs the rest of one's life Also detailed are the medical financial mental and other preparations that must be undertaken as part of the transplant process Guidance on what to expect how to help where to seek assistance and how to support the patient is also given Answers to the tough practical and emotional questions that teens have about an organ transplant such as will my parent survive the surgery how long will it take for my parent to recover and why is this happening to me are discussed Numerous question and answer sections of frequently asked questions about organ transplants and the myths that surround them are included as well as contact information for organizations that provide many forms of assistance for recipients and their families Through all the serious issues however this book offers much hope and promise for recipients and their families through the stories of those whose lives have been greatly improved through an organ transplant This is the ideal resource for all readers who are interested in the subject of organ donation and transplant including those who are facing a transplant and their family members as well as *What Are the Limits of Organ Transplants?* Anna Claybourne, 2012 Discusses the process of organ transplantation which organs can be transplanted and cutting edge science in the field Cryobiology Cherie Winner, 2006-01-01 Suspended animation the act of freezing a living specimen at extreme temperatures and then thawing it out again in the future is the goal of cryobiology This science is so fantastic that it almost seems like science fiction and yet nature shows that this process is a part of life for many insects and animals Discover how this fascinating process could change the world forever in this compelling look at the future of science Organ Donation Sarah Boslaugh, 2022-04-01 Offering a comprehensive yet accessible look at organ donation and transplantation this book examines the scientific medical social legal and ethical issues surrounding it Readers will discover how new technologies and medical advances are shaping the future of organ donation Donated organs and tissues have improved or saved the lives of hundreds of thousands of individuals but these life changing procedures also raise many logistical and ethical questions How can organs be effectively allocated to those in need Should individuals be allowed to purchase organs from living donors What

role does religion and culture play in someone's decision to donate or accept an organ Will new technologies like bioprinting change the future of organ donation This book answers all these questions and more

The Political Economy of Organ Transplantation Hagai Boas, 2022-09-09 This thought provoking work examines how the relationships of organs tissues and cells transferred from one body to another through donation sale or gift are mediated by the state market and family The book is a thorough review of the sociological anthropological and ethical literature surrounding transplant organs but encased within the author's own personal dilemmas and lived experience His work skillfully underscores the negotiations and accommodations inherent in the use of these technologies and reveals the situatedness of decisions that belie any simplistic readings of the ethics of transplantations This is a stimulating and accessible book for those with an interest in transplantation ethics or the social implications of medical technologies Its strength lies in the reflexive accounts from the author of his own experience juxtaposed with the sensitive appraisals of the workings of the state market and family in the organ economy Andrea Whittaker Monash University reviewed for Social Forces This innovative work combines a rigorous academic analysis of the political economy of organ supply for transplantation with autobiographical narratives that illuminate the complex experience of being an organ recipient Organs for transplantations come from two sources living or post mortem organ donations These sources set different routes of movement from one body to another Postmortem organ donations are mainly sourced and allocated by state agencies while living organ donations are the result of informal relations between donor and recipient Each route traverses different social institutions determines discrete interaction between donor and recipient and is charged with moral meanings that can be competing and contrasting The political economy of organs for transplants is the gamut of these routes and their interconnections and this book suggests how such a political economy looks like what are its features and contours its negotiation of the roles of the state market and the family in procuring organs for transplantations and its ultimate moral justifications Drawing on Boas personal experiences of waiting searching and obtaining organs each autobiographical section of the book sheds light on a different aspect of the discussed political economy of organs post mortem donations parental donation and organ market and illustrates the experience of living with the fear of rejection and the intimidation of chronic shortage A Political Economy of Organ Transplantation is of interest to students and academics with an interest in bioethics sociology of health and illness medical anthropology and science and technology studies
