**Clinical Neuropathology** R. O. Weller, M. Swash, D. L. McLellan, C. L. Scholtz, 2012-12-06 Although most textbooks of neurology contain a certain amount of pathological information neuropathology has often been treated in isolation However neuropathology has a close relationship to clinical neurology neurosurgery and neuroradiology Thus advances in the rapidity and accuracy of pathological diagnosis have often led to changes in clinical management and recently improvements in clinical diagnosis particularly CT scanning have brought about a change in emphasis in the practice of neuropathology In this textbook we have sought to present a widely based account of neuropathology in combination with information from clinical experience We chose this approach in order to emphasize the close interrelation between clinician and pathologist The book grew out of a course organised jointly by two neurologists and two neuropathologists from the Departments of Neuropathology and Neurology of The London Hospital and The University of Southampton It is hoped that the book will be useful not only to pathologists neurologists neurosurgeons and neuroradiologists but also to general physicians In a period of rapid advance in knowledge it is important to recognise how changes in the clinical and laboratory disciplines overlap In order to make the most of consultations with pathologist colleagues the clinician must know what skills and techniques are available in the laboratory and similarly the pathologist must keep abreast of changes in clinical practice In the past the clinician and pathologist have often been slow to appreciate advances in each other's fields **The Herpesviruses** Bernard Roizman, 2012-12-06 A great truth is a truth whose opposite is also a great truth Thomas Mann Essay on Freud 1937 This

volume centers on pseudorabies PR V herpes simplex viruses 1 and 2 HSV 1 and HSV 2 and human cytomegalovirus CMV and fulfills three objectives The chapters on the epidemiology and latency of HSV and on the glycoproteins specified by HSV and CMV set the stage for the discussions of the immunobiology and pathogenesis of human herpesvirus infections in Volume 4 The epidemiology of HSV is the basis of our understanding of the spread and survival of this virus in the human populations Central to the epidemiology of HSV and its pathogenesis in humans is the ability of the virus to remain in a latent state for the life of its host The viral membrane glycoproteins are among the most interesting virion proteins primarily because of their critical role in the initiation of infection Since they are the surface membrane proteins of the virion and appear on the surface of productively infected cells they are also the obvious if not the exclusive targets of the immune response The chapters on the transforming potential of HSV and CMV and on the role of HSV in human cancer deal with challenging problems requiring rather different experimental tools
