Recent Advances in Pediatric Neuroradiology Sahar Ahmad, Ye Wu, Yunzhi Huang, 2025-06-19 Pediatrics neuroradiology is a subspecialty of radiology that focuses on the use of advanced neuroimaging techniques to study brain growth and to diagnose diseases and malformations in neonates, infants, toddlers, children and adolescents. Recent technical and methodological developments and the use of artificial intelligence (AI) has improved the field of pediatric neuroradiology, resulting in enhanced diagnostic care, personalized treatments and better patient outcomes. Pediatric neuroradiology plays a key role in diagnosing, characterizing and monitoring the progression of neurological disorders in children. A wide variety of imaging techniques including magnetic resonance imaging (MRI), computed tomography (CT) and ultrasound (US) are employed for the evaluation of conditions common among children. One of the most challenging aspects of pediatric neuroradiology is the need for age-specific considerations for processing and interpreting imaging exams in relation to different age groups due to the dynamic and ongoing development of the brain from neonacy to adolescence. This requires knowledge of early developing patterns in neurotypical subjects and development milestones.
