Membrane Separations Technology R.D. Noble,S.A. Stern,1995-01-17 The field of membrane separation technology is presently in a state of rapid growth and innovation Many different membrane separation processes have been developed during the past half century and new processes are constantly emerging from academic industrial and governmental laboratories While new membrane separation processes are being conceived with remarkable frequency existing processes are also being constantly improved in order to enhance their economic competitiveness Significant improvements are currently being made in many aspects of membrane separation technology in the development of new membrane materials with higher selectivity and or permeability in the fabrication methods for high flux asymmetric or composite membranes in membrane module construction and in process design Membrane separation technology is presently being used in an impressive variety of applications and has generated businesses totalling over one billion U S dollars annually The main objective of this book is to present the principles and applications of a variety of membrane separation processes from the

unique perspectives of investigators who have made important contributions to their fields Another objective is to provide the reader with an authoritative resource on various aspects of this rapidly growing technology The text can be used by someone who wishes to learn about a general area of application as well as by the knowledgeable person seeking more detailed information

Biotechnological Applications of Lipid Microstructures B. P. Gaber, 2012-12-06 In the twenty years since Bangham first described the model membrane system which he named liposomes a generation of scientists have explored the properties of lipid based microstructures Liposomes of all sizes tubular and helical structures and self assembled lipid films have been prepared and studied in detail Many of the advances in the basic research have led to significant technological applications Lipid microstructure research has begun to mature and it is an appropriate time for an in depth look at the biotechnological applications both achieved and potential As a forum for active discussions within this growing field two Workshops were organized Technological Applications of Phospholipid Bilayers Vesicles and Thin Films held in Puerto de la Cruz Tenerife Canary Islands and Biotechnological Applications of Membrane Studies held in Donostia San Sebastian Basque Country Spain The organizers of these Workshops believe that development of lipid self assembly into a technological discipline requires significant interaction across traditional scientific boundaries Thus the Workshops gathered an eclectic group of colleagues whose interests ranged from basic research into structure interactions and stabilization of biomembranes to applications of lipid microstructures such as artificial cells diagnostic reagents energy transfer systems and biosensors
