Recent Progress In Statistical Mechanics And Quantum Field Theory:

Recent Progress In Statistical Mechanics And Quantum Field Theory H Saleur, Peter Bouwknegt, 1995-08-31 The following topics were covered the study of renormalization group flows between field theories using the methods of quantum integrability S matrix theory and the thermodynamic Bethe Ansatz impurity problems approached both from the point of view of conformal field theory and quantum integrability This includes the Kondo effect and quantum wires solvable models with 1 r interactions Haldane Shastri models Yangian symmetries in 1 r models and in conformal field theories correlation functions in integrable 1 1 field theories integrability in three dimensions conformal invariance and the quantum hall effect supersymmetry in statistical mechanics and relations to two dimensional Yang Mills and QCD

Randjbar-Daemi, Hubert Saleur, 1996 *Recent Developments in Quantum Field Theory* J. Ambjorn, B.J. Durhuus, J.L. Petersen, 2012-12-02 Theoretical particle physicists discuss the present status and in particular the latest developments in quantum field theory in their broadest aspects This volume contains the main lectures presented at the symposium and reflects the contemporary status of a line of development one of whose initiators was Niels Bohr Recent Developments in Statistical Mechanics and Quantum Field Theory Recent Developments In Statistical Mechanics And Quantum Field Theory, 1996 Recent Developments In Nonperturbative Quantum Field Theory: Proceedings Of The Apctp-ictp Joint International Conf Yongmin Cho, Miguel Angel Virasoro, 1998-09-28 **Recent Developments in Statistical Mechanics and Quantum Field Theory** G. New Developments in Quantum Field Theory and Statistical Mechanics Cargèse 1976 M. Levy, 2013-06-29 The 1976 Cargèse Summer Institute was devoted to the study of certain exciting developments in quantum field theory and critical phenomena Its genesis occurred in 1974 as an outgrowth of many scientific discussions amongst the undersigned who decided to form a scientific committee for the organization of the school On the one hand various workers in quantum field theory were continuing to make startling progress in different directions On the other hand many new problems were arising from these various domains Thus we felt that 1976 might be an appropriate occasion both to review recent developments and to encourage interactions between researchers from different backgrounds working on a common set of unsolved problems An important aspect of the school as it took place was the participation of and stimulating interaction between such a broad spectrum of theorists The central topics of the school were chosen from the areas of solitons phase transitions critical behavior the renormalization group gauge fields and the analysis of nonrenormalizable field theories A noteworthy feature of these topics is the interpenetration of ideas from quantum field theory and statistical mechanics whose inherent unity is seen in the functional integral formulation of quantum field theory The actual lectures were partly in the form of tutorials designed to familiarize the participants with recent progress on the main topics of the school Others

were in the form of more specialized seminars reporting on recent research

Eighth Marcel Grossmann Meeting, The: On Recent Developments In Theoretical And Experimental General Relativity, Gravitation, And Relativistic Field Theories - Proceedings Of The Meeting (In 2 Parts) Tsvi Piran, Remo Ruffini, 1999-05-14 Since 1975 the Marcel Grossmann Meetings have been organized to provide opportunities for discussing recent advances in gravitation general relativity and relativistic field theories emphasizing mathematical foundations physical predictions and experimental tests The objective of these meetings is to facilitate exchange among scientists that may deepen our understanding of space time structures and to review the status of ongoing experiments aimed at testing Einstein's theory of gravitation from either the ground or space The Eighth Marcel Grossmann Meeting took place on 22-27 June 1997 at the Hebrew University of Jerusalem Israel The scientific program included 25 plenary talks and 40 parallel sessions during which 400 papers were presented The papers that appear in this book cover all aspects of gravitation from mathematical issues to recent observations and experiments

Recent Developments in Infinite-Dimensional Lie Algebras and Conformal Field Theory Stephen Berman, 2002 Because of its many applications to mathematics and mathematical physics the representation theory of infinite dimensional Lie and quantized enveloping algebras comprises an important area of current research This volume includes articles from the proceedings of an international conference Infinite Dimensional Lie Theory and Conformal Field Theory held at the University of Virginia Many of the contributors to the volume are prominent researchers in the field This conference provided an opportunity for mathematicians and physicists to interact in an active research area of mutual interest The talks focused on recent developments in the representation theory of affine quantum affine and extended affine Lie algebras and Lie superalgebras They also highlighted applications to conformal field theory integrable and disordered systems Some of the articles are expository and accessible to a broad readership of mathematicians and physicists interested in this area others are research articles that are appropriate for more advanced readers
