Recent Developments On Structural Equation Models:

Recent Developments on Structural Equation Models Kees van Montfort, Johan Oud, Albert Satorra, 2004-03-31 After Karl J. reskog's first presentation in 1970 Structural Equation Modelling or SEM has become a main statistical tool in many fields of science. It is the standard approach of factor analytic and causal modelling in such diverse fields as sociology, education, psychology, economics, management and medical sciences. In addition to an extension of its application area, Structural Equation Modelling also features a continual renewal and extension of its theoretical background. The sixteen contributions to this book, written by experts from many countries, present important new developments and interesting applications in Structural Equation Modelling. The book addresses methodologists and statisticians professionally dealing with Structural Equation Modelling to enhance their knowledge of the type of models covered and the technical problems involved in their formulation. In addition, the book offers applied researchers new ideas about the use of Structural Equation Modeling in solving their problems. Finally, methodologists, mathematicians and applied researchers alike are addressed who simply want to update their knowledge of recent approaches in data analysis and mathematical modelling. **Recent**

New Developments and

Techniques in Structural Equation Modeling George A. Marcoulides, Randall E. Schumacker, 2001 Featuring contributions from some of the leading researchers in the field of SEM, most chapters are written by the author(s) who originally proposed the technique and/or contributed substantially to its development. Content highlights include latent variable mixture modeling, multilevel modeling, interaction modeling, models for dealing with nonstandard and noncompliance samples, the latest on the analysis of growth curve and longitudinal data, specification searches, item parceling and equivalent models. This volume will appeal to educators, psychologists, biologists, business professionals, medical researchers and other social and health scientists. It is assumed that the reader has mastered the equivalent of a graduate level multivariate statistics course that included
