Recent Progress In Hormone Research Volume 32:

Recent Progress in Hormone Research Gregory Pincus, 2013-10-22 Recent Progress in Hormone Research Volume IV is a collection of papers delivered at the 1948 Laurentian Hormone Conference held at Franconia New Hampshire This volume is composed of four parts encompassing 16 chapters that cover experimental works on the role of hormones in metabolism and the thyroid physiology and function The opening part deals with some aspects of steroid hormone metabolism including progesterone estrogen and androgen This part emphasizes the clinical aspects of physiology and function of ovarian hormones The subsequent part is devoted to the role of hormones in tissue and body metabolism This part particularly describes the antihormone problem in endocrine therapy and the alterations in metabolism incident to administration of insulin adrenalin and thyroid substances The metabolic changes under adrenal and pituitary hormone administration are also examined These topics are followed by discussions on the neurohumoral hypothalamic relationships specifically the adrenal function in mental disease and effects of hypothalamic lesions on water and energy metabolism The final part covers the conditions influencing the production and release of thyroid stimulating hormone by the anterior pituitary the primary actions of the hormone on its target gland a possible mode of action and the factors that influence this hormone's action on the thyroid This book will prove useful to endocrinologists Recent Progress in Hormone Research

James H. Clark, 2013-10-22 Recent Progress in Hormone Research Volume 46 provides a superior summary of the developments in the field of hormone research The book discusses the molecular basis of androgen insensitivity the tissue specific expression of the growth hormone gene and its control by growth hormone factor 1 and the molecular characterization of mammalian tachykinin receptors and a possible epithelial potassium channel The text also describes the properties of the guanylate cyclase receptor family insulin like growth factor binding proteins and growth hormone receptor and binding protein Mutations in the insulin receptor gene in genetic forms of insulin resistance the characteristics of the cAMP response unit and the role and secretion of inhibin in the rat are also considered The book further tackles the structure of the lutropin choriogonadotropin receptor and the gene for multiple endocrine neoplasia type 2a Endocrinologists physiologists and biochemists will find the text invaluable *Recent Progress in Hormone Research* C. Wayne

Bardin, 2014-05-10 Recent Progress in Hormone Research Volume 48 provides information pertinent to endocrine research dealing with all aspects of biological organization This book covers a variety of topics including differentiation of the embryo development and growth at puberty maintenance of adult well being and aging Organized into 29 chapters this volume begins with an overview of the role of oncogenes in fetal development This text then compares the molecular descriptions of the genes for growth hormone and prolactin receptors to receptors for a variety of other hormones peptide and growth factors Other chapters consider the three dimensional structure of the growth hormone receptor This book discusses as well the conventional and nonconventional uses of human growth hormone with emphasis on the wide availability of protein that

is possible only through molecular biology The final chapter deals with the effect of hormones on primate behavior This book is a valuable resource for geneticists and biologists

The Year in Endocrinology 1977 S. Ingbar, 2012-12-06 This has been a year of substantial change for *The Year in Endocrinology* The first change though perhaps only a semantic one nevertheless represents a landmark Although last year's volume was designated as the first of an annual series that seemed to me at the time merely a hope a realistic hope perhaps but a hope nevertheless With the publication of this year's volume however this can accurately be said to be an annual series one that we trust will fulfill a need and will therefore continue for years to come Among other changes from last year's volume are some that were originally intended and others that were unintended In the former category is the substitution of a chapter on water metabolism and vaso pressin excellently prepared by Dr Gary L Robertson for the chapter on paraendocrine syndromes that appeared last year Chapters on these two topics will continue to appear on alternate years Obviously the non recurring chapter on a topic of special interest has also changed and this year's comprises a comprehensive review of autoimmune endocrine disease by Drs Jay Silverberg and Robert Volpe The unexpected change results from the inability of Dr Louis Avioli to continue as a member of the Editorial Board Most fortunately however we have persuaded Dr Charles R Kleeman to join the Board and to be responsible for the chapter on the parathyroid gland and mineral metabolism Dr Kleeman has been assisted on the preparation of this chapter by his daughter Dr

Contemporary Topics in Molecular Immunology R. A. Reisfeld, 2013-12-01 New information is developing so rapidly in the entire field of immunology that one is unable to remain abreast of all advancing fronts In many cases considerable information has accumulated as the result of the efforts of many investigators but the conclusions from the various laboratories have not been summarized recently in a comprehensible manner One such situation has to do with work on IgD An up to date report on this immunoglobulin was included in Volume 10 of this series but since that time there has been considerable progress in the determination of its structure and function In the present volume Leslie and Martin have reviewed the accomplishments of recent years and the problems remaining to be solved New information regarding the concentration of IgD in body fluids in normal and disease states is presented Studies of the ontogeny of surface IgD in animals are described and the findings imply that it may be important in the primary immune response The role of IgD on lymphocyte surfaces is thoroughly discussed especially in terms of stimulating or suppressive combinations of signals delivered to the lymphocyte by agents which bind or alter the surface receptors The authors conclude by proposing a model for plasma cell differentiation which accounts for the existence of triple Ig bearing cells many IgM IgD bearing cells and the low percentage of cells bearing a single isotype Sometimes the serum of an individual contains abnormally large amounts of two distinct homogeneous populations of immunoglobulins

Structure and Function of the Gonadotropins Kenneth W. McKerns, 2012-12-06 In September of 1977 scientists from many countries met at the Asticou Inn in Maine to present and discuss papers written especially for this monograph The presentations were informal and directed to the special interests of

the audience in order to generate discussions The authors many of whom are pioneers and leaders in their field then had the opportunity to revise their contributions which were brought together with the edited discussions to form this volume The basic research studies presented here are important because of the essential role of gonadotropins in regulating the ovary and testis This monograph will therefore be of interest to those concerned with fertility regulation population control possible new methods for contraception and to those concerned with reproduction in domestic animals Researchers in other fields may find this monograph useful as it has been determined that gonadotropins are secreted by many tumors and are implicated in many cancers Human choriogonadotropin also seems to be found in most if not all cells of the human body The significance of this however is unknown

Molecular Structure by Diffraction Methods L E Sutton,M R

Truter,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Adolescence and Puberty John Bancroft,June Machover Reinisch,1990 Scientists from 10 disciplines contribute essays which explore various aspects of this critical stage in human development in a volume designed for the benefit of social and developmental psychologists psychologists interested in sexuality studies and child and adolescent psychiatrists

Epidemiology of Thyroid Disorders Jahangir Moini,Katherine Pereira,Mohtashem Samsam,2020-01-08 Epidemiology of Thyroid Disorders provides comprehensive clinical knowledge to professionals dealing with thyroid disorders The book focuses on the pathophysiology of thyroid disorders the prevalence and incidence of various diseases and their prevention This focused analysis on thyroid disorders raises awareness of this global problem that once diagnosed or misdiagnosed can sometimes lead to over treatment and cardiovascular complications especially in the elderly This succinct targeted reference gives the reader excellent information on the epidemiology of global thyroid disorders as well as up to date treatment data and a special focus on prevention Serves as a starting point for medical professionals addressing the patterns risk factors prevention and treatment of thyroid disorders around the world Discusses the prevalence of thyroid disorders around the

world covering disability and cost burden Covers recent trends technologies and advancements in the management of thyroid diseases

Molecular Structure and Biological Activity of Steroids Martin Bohl,2018-01-18 Molecular Structure and Biological Activity of Steroids focuses on the identification of steroid structural features that control particular biological effects Steroid geometry plays a critical role in steroid activity therefore the results of X ray crystallographic NMR spectroscopic and theoretical studies on structure activity relationships form an integral part of the book Well established observations and proposed models are presented summarizing knowledge of molecular features e g steroid backbone structures side chain constitutions substitution sites configurations hydrogen bonding patterns that can affect steroid action The book also provides overviews about recent progress in various frontier fields of steroid research including such areas as sex steroids glucocorticoids aromatase inhibitors vitamin D metabolites brassinosteroids neuromuscular blocking agents and cardiotonic steroids Molecular Structure and Biological Activity of Steroids is a must have resource for biochemists

pharmacologists endocrinologists biophysicists and others actively involved in steroid research **Hormonal Regulation of Mammary Tumors** Benjamin S. Leung,2012-12-06 The concept that hormones influence tumor growth originated in 1889 with the proposal of Albert Schinzinger who suggested that breast cancer is related to the ovaries Several years later Sir George Beatson observed that remission of disseminated breast cancer could be achieved in premenopausal patients by performing bilateral oophorectomy As a result of the contributions of Hedley Atkins Charles Huggins and others additive and ablative hormonal therapies have been widely used for the treatment of advanced breast cancers for several decades Model systems to study the effects of hormones on growth and regression of breast tumors have been available for many years however the complexities of the hormonal environment have rendered in vivo studies difficult in man and experimental animals Recently the availability of long term cultures of breast cancer cells has stimulated many investigators to use these cell lines to unravel the mechanisms of hormone action Because of the extreme diversity and complexity of advances regarding the endocrinology of the breast and breast cancers a multi authored review was deemed necessary It has been gratifying to receive contributions from many noted scholars In Volume I of this monograph the influence of steroid hormones and their antagonists upon normal and neoplastic tissues of the mammary gland are presented In Volume II the effects of peptide and other hormones are reviewed

Luteinizing Hormone Action and Receptors Mario Ascoli,2019-08-15 First published in 1985 The principle reason for publishing this book is to put together current knowledge about the actions of luteinizing hormone in a single volume

Hormones and Brain Function K. Lissak,2012-12-06 The International Society of Psychoneuroendocrinology organized its second congress

in Budapest between 1 and 3 July 1971 The sudden death on the 27th of July 1970 of Professor Max Reiss the President of the Society nearly caused a break in the preparation of the Congress but with the invaluable help of Professor Donald H Ford Treasurer and Acting President and Professor Francesca Brambilla Secretary of the Society the Organizing Committee surmounted the difficulties The Organizing Committee of the Congress set out five main topics discussed in five sections by invited lecturers and collective papers by registered discussants Technically the Congress was organized by the Hungarian Physiological Society in cooperation with the Federation of Hungarian Medical Societies in the building of the Hungarian Academy of Sciences Thanks to the generosity of the Medical Section of the Hungarian Academy of Sciences we are able to publish the Proceedings of the Congress by the Publishing House of the Hungarian Academy of Sciences jointly with Plenum Press New York The Congress was sponsored by the International Society of Psychoneuroendocrinology the Hungarian Academy of Sciences the Hungarian Pharmaceutical Industry the Factory of Electronic Measuring Instruments the Upjohn Co Kalamazoo Michigan and the Wellcome Research Laboratory Langley Court Beckenham Kent England On behalf of the Organizing Committee may I express our grateful thanks for their generous assistance which despite many difficulties made the successful organization of an international congress possible

The Hippocampus Robert Isaacson, 2012-12-06 These books are the result of a conviction held by the editors authors and publisher that the time is appropriate for assembling in one place information about functions of the hippocampus derived from many varied lines of research Because of the explosion of research into the anatomy physiology chemistry and behavioral aspects of the hippocampus some means of synthesis of the results from these lines of research was called for We first thought of a conference In fact officials in the National Institute of Mental Health suggested we organize such a conference on the hippocampus but after a few tentative steps in this direction interest at the federal level waned probably due to the decreases in federal support for research in the basic health sciences so keenly felt in recent years However the editors also had come to the view that conferences are mainly valuable to the participants The broad range of students of all ages of brain behavior relations do not profit from conference proceedings unless the proceedings are subsequently published Furthermore conferences dealing with the functional character of organ systems approached from many points of view are most successful after participants have become acquainted with each other's work Therefore we believe that a book is the best format for disseminating information and that its publication can be the stimulus for many future conferences
