Recent Revolutions In Geology:

The Revolution in Geology from the Renaissance to the Enlightenment Gary D. Rosenberg, 2009-01-01 *A New System of Geology, in which the Great Revolutions of the Earth and Animated Nature, are Reconciled at Once to Modern Science and Sacred History* Andrew Ure, 1829 **An Introduction to Geology** Robert Bakewell, 1833 Drifting Continents and Shifting Theories Homer Eugene LeGrand, 1988-12-15 A historical account of the triumph of the global theory of plate tectonics and its implications for the modern revolution in geology of the 1960s and 1970s after fifty years of controversy and competition Anthropocene Reading Tobias Menely, Jesse Oak Taylor, 2017-10-13 Few terms have garnered more attention recently in the sciences humanities and public sphere than the Anthropocene the proposed epoch in which a human signature appears in the lithostratigraphic record Anthropocene Reading considers the implications of this concept for literary history and critical method Entering into conversation with geologists and geographers this volume reinterprets the cultural past in relation to the anthropogenic transformation of the Earth system while showcasing how literary analysis may help us conceptualize this geohistorical event The contributors examine how a range of literary texts from *The Tempest* to contemporary dystopian novels to the poetry of Emily Dickinson mediate the convergence of the social institutions energy regimes and planetary systems that support the reproduction of life They explore the long standing dialogue between imaginative literature and the earth sciences and show how scientists novelists and poets represent intersections of geological and human timescales the deep past and a posthuman future political exigency and the carbon cycle Accessibly written and representing a range of methodological perspectives the essays in this volume consider what it means to read literary history in the Anthropocene Contributors include Juliana Chow Jeffrey Jerome Cohen Thomas H Ford Anne Lise Francois Noah Heringman Matt Hooley Stephanie LeMenager Dana Luciano Steve Mentz Benjamin Morgan Justin Neuman Jennifer Wenzel and Derek Woods **Elements of Geology** William Samuel Waithman Ruschenberger, 1846 Explaining Science Ronald N. Giere, 2010-12-15 This volume presents an attempt to construct a unified cognitive theory of science in relatively short compass It confronts the strong program in sociology of science and the positions of various postpositivist philosophers of science developing significant alternatives to each in a readily comprehensible style It draws loosely on recent developments in cognitive science without burdening the argument with detailed results from that source The book is thus a provocative one Perhaps that is a measure of its value it will lead scholars and serious student from a number of science studies disciplines into continued and sharpened debate over fundamental questions Richard Burian Isis The writing is delightfully clear and accessible On balance few books advance our subject as well Paul Teller *Philosophy of Science* **Historical geology** Louis Valentine Pirsson, 1924 **Varying Gravity** Helge Kragh, 2016-02-05 The main focus of this book is on the interconnection of two unorthodox scientific ideas the varying gravity hypothesis and the expanding earth hypothesis As such it provides a fascinating insight into a nearly forgotten chapter in both the history of cosmology and the

history of the earth sciences The hypothesis that the force of gravity decreases over cosmic time was first proposed by Paul Dirac in 1937 In this book the author examines in detail the historical development of Dirac s hypothesis and its consequences for the structure and history of the earth the most important of which was that the earth must have been smaller in the past *Problems of American Geology* William North Rice,1915
