Receptor Subunits And Complexes:

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology Current Topics in Membranes and Transport, 1990-08-10 Current Topics in Membranes and Transport *Encyclopedia of Biological Chemistry*, 2013-01-08 The 4 volume Encyclopedia of Biological Chemistry Second Edition represents the current state of a dynamic and crucial field of study The Encyclopedia pulls together over 500 articles that help define and explore contemporary biochemistry with content experts carefully chosen by the Editorial Board to assure both breadth and depth in its coverage Editors In Chief William J Lennarz and M Daniel Lane have crafted a work that proceeds from the acknowledgement that understanding every living process from physiology to immunology and genetics is impossible without a grasp on the basic chemistry that provides its underpinning Each article in the work provides an up to date snapshot of a given topic written by experts as well as suggestions for further readings for students and researcher wishing to go into greater depth Available on line via SciVerse ScienceDirect the functionality of the Encyclopedia will provide easy linking to referenced articles electronic searching as well an online index and glossary to aid comprehension and searchability This 4 volume set thoroughly up to date and comprehensive expertly captures this fast moving field Curated by two esteemed editors in chief and an illustrious team of editors and contributors representing the state of the field Suggestions for further readings offer researchers and students avenues for deeper exploration a wide ranging glossary aids comprehension **Neuroreceptor Endocytosis and Signaling in Health and Disease** Indra Mani, 2025-04-26 This book covers a wide range of neuroreceptor topics including receptor endocytosis and signaling and the role of neuroreceptors in health and disease conditions It focuses on various important nervous system receptors and their biomedical applications especially receptor signaling The book provides a look into the current developments of various neuroreceptors responsible for pathophysiological conditions It is a valuable cutting edge in depth reference on neuroreceptors featuring clearly written chapters from major contributors in the field The central

Zamponi, 2015-04-15 In the search for simple explanations of the natural world its complicated textures are often filed down to a smoothened surface of our liking The impetus for this Research Topic was borne out of a need to re ignite interest in the complex in this case in the context of ion channels in the nervous system Ion channels are the large proteins that form regulated pores in the membranes of cells and in the brain are essential for the transfer processing and storage of information These pores full of twists and turns themselves are not just barren bridges into cells More and more we are beginning to understand that ion channels are like bustling medieval bridges packed with apartments and shops rather than the more sleek modern variety they are dynamic hubs connected with many structures facilitating associated activities Our understanding of these networks continues to expand as our investigative tools advance Together these articles highlight how the complexity of ion channel signaling nexuses is critical to the proper functioning of the nervous system *Protein Structure and Function* Gregory A. Petsko, Dagmar Ringe, 2004 Each title in the Primers in Biology series is constructed on a modular principle that is intended to make them easy to teach from to learn from and to use for reference *Protein Engineering and Design* Paul R. Carey, 1996-06-21 The design and production of novel peptides and proteins occupy pivotal positions in science and technology and will continue to do so in the 21st century Protein Engineering and Design outlines the rapid advances in computer based modeling protein engineering and methods needed for protein and peptide preparation and characterization This indispensable reference lays the groundwork for

understanding this multidisciplinary activity while providing an introduction for researchers and students to the field of protein design Introduces and defines the techniques involved in protein engineering and design Provides a concise overview of key technologies involved and demonstrates their contributions to the specialized design and production of novel proteins and peptides *GPCR Signalling Complexes - Synthesis, Assembly, Trafficking and Specificity* Denis J. Dupré, Terence E. Hébert, Ralf Jockers, 2012-11-19 Main Question G protein coupled receptors are involved in highly efficient and specific activation of signalling pathways How do GPCR signalling complexes get assembled to generate such specificity In order to answer this question we need to understand how receptors and their signalling partners are synthesized folded and quality controlled in order to generate functional proteins Then we need to understand how each partner of the signalling complex is selected to join a complex and what makes this assembly possible GPCRs are known to be able to function as oligomers what drives the assembly into oligomers and what will be the effects of such organization on specificity and efficacy of signal transduction Once the receptor complexes are assembled they need to reach different locations in the cell what drives and controls the trafficking of GPCR signalling complexes Finally defects in synthesis maturation or trafficking can alter functionality of GPCRs signalling complexes how can we manipulate the system to make it function normally again Pharmacological chaperones may just be part of the answer to this question
