Neuropsychiatric disorders have long been considered as specific dysfunctions of neuronal functions Studies of the recent decade however have challenged this simplistic view highlighting the important role played by neuroglial cells in the onset and or progression of neuropsychiatric diseases In the central nervous system CNS non excitable neuroglia are represented by cells of ectodermal origin astrocytes mainly responsible for CNS homeostasis and oligodendrocytes that provide myelination and support for axons and mesodermal origin microglial cells that are scions of foetal macrophages entering the neural tube early in development these cells provide for CNS defence and contribute to shaping neuronal networks Pathological changes of neuroglia are complex these changes are classified into reactive gliosis astrogliosis activation of microglia and hypertrophy of oligodendroglial precursors gliodegeneration with loss of function and glial pathological remodelling Combination of these processes defines the evolution of neurological diseases in general and neuropsychiatric

disorders in particular In this research topic we addressed the contribution of neuroglia to major neuropsychiatric pathologies including major depression schizophrenia and addictive disorders *Review of General Psychiatry, Fifth Edition* Howard H. Snyder,2009-02-20 Solomon Snyder has been instrumental in the establishment of modern psychopharmacology as a pioneer in the identification of receptors for neurotransmitters and drugs and in the explanation of the actions of psychotropic agents Science and Psychiatry is a collection of some of his best scientific papers publications ranging over forty years that represent important advances in psychopharmacology and molecular biology Audacious and unanticipated when they first appeared these papers opened up new areas of understanding and revolutionized the modern study of the brain Republished here they show why fundamental research into the messengers of the mind is as essential for clinicians as for researchers Many of these papers have clear clinical relevance offering insight into modern neuroscience to help make sense of the bewildering array of available psychotropic medications and point the way toward more effective and safer agents Others describe the underpinnings of psychopharmacology that practitioners need to know especially regarding the role of receptors in drug action Each of the nine groups of research articles is accompanied by a commentary by a well known authority putting the discoveries in perspective and providing a broad overview of subjects ranging from characterization of the enkephalins to serotonin receptor subtypes The final set of papers focuses on apoptosis the general process of cell suicide where Snyder s work with bilirubin holds promise for treating neurodegenerative disorders And in a closing piece The Audacity Principle in Science Snyder speculates about factors conducive to creativity and efficacy in scientific discovery The articles particularly describe four groups of extraordinary discoveries for which Snyder is widely recognized Identification of opiate receptors providing keys to understanding pain perception Characterization of the IP3 receptor exploring its role as a target for lithium treatment in manic depressive disorders Establishment of nitric oxide as a transmitter in the brain radically transforming conceptualizations of neurotransmission Discovery that D serine is the normal stimulus for the glycine site of the NMDA receptor providing new insight into the regulation of the receptor important for learning and memory Hailed as one of the preeminent scientists of the past twenty years Snyder is a consummate researcher who confesses to remaining obsessed with the need to think thoughts no one else has thought before Science and Psychiatry clearly shows how that urge accounts for the diversity of challenges he has taken on as it conveys the origins of modern psychopharmacologic practice **Psychopharmacology Bulletin** ,1966 **The Search for Biomarkers in Psychiatry** Jorge Manzanares,Maria S.
