## Summary

*Raja M, Azzoni A, Lubich L. Religious delusion. Schweiz Arch Neurol Psychiatr 2000;151:22-9.*

**Objective:** Little is known about the clinical features associated with religious delusion and how religious delusion may differ across various diagnostic groups. The empirical research on this topic is relatively scanty. The primary purpose of this study was to detect the demographic, sociocultural, and clinical features of patients with religious delusion.

**Method:** We studied 313 patients consecutively admitted to an emergency psychiatric ward and compared patients with and without religious delusion.

**Results:** Patients with religious delusion were older, had started their first neuroleptic treatment earlier, had suffered less acute psycho-social stressors, and had presented a worse global functioning during the last year than patients without religious delusion. Furthermore, they received higher SAPS, BPRS total and BPRS psychotic cluster scores and were treated with a higher mean number of different neuroleptics during current hospitalisation. Religious delusion was not related to any diagnostic group.

**Conclusions:** Our results suggest an alternative outlook on delusions that de-emphasises the importance of diagnosis and looks instead at delusions and other major symptom areas as psychopathological dimensions.

**Keywords:** emergency psychiatry; delusion; religious delusion; religion and psychology

## Introduction

Delusions are common and main symptoms in many neuropsychiatric disorders. Nevertheless, as Spitzer [1] notes, their nature is poorly understood, their aetiology is unknown, and their nosological status remains problematic. Furthermore, despite the frequency and the importance of delusions, a relatively small amount of research has been conducted in this field [2]. Questions about how delusions may differ across diagnostic groups are still unanswered.

Some forms of delusion are considered to be characteristic of schizophrenia or bipolar disorder, however, no delusional content is specific of these illnesses. Traditionally, religious delusion, with or without hallucinations, has been associated with schizophrenia, affective psychoses, complex partial seizure disorder and drug-induced psychoses. Recent reports have associated religious delusion with epileptic postictal psychosis [3], psychoses characterised by self-inflicted injuries [4-6], psychoses induced by general medical illnesses [7, 8], and mystical-religious fervor [9].

Although religious delusion has regularly been reported throughout the history of neuropsychiatry, surprisingly, there is no systematic study of religious delusion in unselected populations of psychiatric patients. We conducted computerised searches of MEDLINE back to 1966, but we did not find empirical studies on this subject.

As our hospital is situated at the centre of Rome, near St. Peter's Basilica, we have the opportunity to visit an unusually large number of patients with religious delusion. Many of these patients are referred to our centre because they display bizarre, shameful, or dangerous behaviour associated with their psychotic symptoms nearby the Basilica. Visitors to St. Peter's Basilica or to the Vatican displaying an abnormal behaviour are interviewed by town police officers and then referred to our hospital if they are considered mentally ill. This prompted us to undertake the present study to detect the demographic, sociocultural, and clinical features of patients with religious delusion

**Religion and Spirituality in Psychiatry** Philippe Huguelet, Harold G. Koenig, 2009-03-30 Although medicine is practised in a secular setting religious and spiritual issues have an impact on patient perspectives regarding their health and the management of any disorders that may afflict them This is especially true in psychiatry as feelings of spirituality and religiousness are very prevalent among the mentally ill Clinicians are rarely aware of the importance of religion and understand little of its value as a mediating force for coping with mental illness This book addresses various issues concerning mental illness in psychiatry the relation of religious issues to mental health the tension between a theoretical approach to problems and psychiatric approaches the importance of addressing these varying

approaches in patient care and how to do so and differing ways to approach Christian Muslim and Buddhist patients

**Is Faith Delusion?** Andrew Sims, 2009-03-09 Is faith delusion Is religion bad for your health How in a scientifically and technologically advanced age can people still believe in God spirit other Clearly not all believers are primitive and ill educated an alternative explanation is that they must be mad or at least severely neurotic as suggested by Freud This book starts by looking at and giving reasons for the connection and the division between Christian faith and psychiatry It asks whether science challenges Christians involved with psychiatry as patients or professionals and whether the spiritual needs of patients are recognised The author examines the scope and use of the neuro sciences and considers cause and effect natural selection and determinism He explores the overlap and the difference between psychiatric symptoms and religious belief the possible association between demon possession and mental illness and the idea that some people are intrinsically religious and some are not The variations of personality are examined with their implications for belief Posited as a statement that faith is delusion is always hostile but outcome studies reviewed here show that in general religious belief and practice convey good mental health Religious faith and mental illness are different and their concepts come from different world views A consideration of them in relation to each other is long overdue The author is a former Professor of Psychiatry and President of the Royal College of Psychiatrists and has also been Chairman of their Spirituality and Psychiatry Special Interest Group so is exceptionally well qualified to address the subject Although the book is technically proficient it is aimed at the general reader and is illustrated with stories brief case histories and anecdotes

Shamans Among Us: Schizophrenia, Shamanism and the Evolutionary Origins of Religion Joseph Polimeni, 2012-12-01 Schizophrenia is one of the most enigmatic human experiences While it can cause terrible distress it doesn't fit the mold of a classic medical disease In Shamans Among Us Joseph Polimeni shows that today's schizophrenia patients are no less than the modern manifestation of tribal shamans people vital to the success of early human cultures Spanning human history and including discussions of evolution the definition of disease and the nature of psychosis Shamans Among Us is the most detailed and comprehensive evolutionary theory yet assembled to explain a specific psychiatric

include spiritual or religious content Psychological and interdisciplinary research has shed a revealing light on these experiences in recent years so that we now know much more about the phenomenon of hearing voices than ever before The present work considers biblical historical and scientific accounts of spiritual and mystical experiences of voice hearing in the Christian tradition in order to explore how some voices may be understood theologically as revelatory It is proposed that in the incarnation Christian faith finds both an understanding of what it is to be fully human a theological anthropology and God's perfect self disclosure revelation Within such an understanding revelatory voices represent a key point of interpersonal encounter between human beings and God
