Manual of Pharmacologic Calculations Ronald J. Tallarida, Rodney B. Murray, 2012-12-06 This book contains a collection of quantitative procedures in common use in pharmacology and related disciplines It is intended for students and researchers in all fields who work with drugs Many physicians especially those concerned with clinical pharmacology will also find much that is useful The procedures included may be considered core since they are generally applicable to all classes of drugs Some of the procedures deal with statistics and hence have even wider application In this new edition we have increased the number of procedures from 33 in the first edition to 48 Other procedures have been revised and expanded Yet the basic philosophy of this new edition remains unchanged from the first That is the pharmacologic basis of each procedure is presented along with the necessary formulas and one or more worked examples An associated computer program is included for each procedure and its use is illustrated with the same worked example used in the text The discussions of theory and the sample computations are brief and self contained so that all computations can be made with the aid of a pocket calculator and the statistical tables contained in Appendix A Yet it is realized that the proliferation of lower priced microcomputers is likely to mean that more and more readers will utilize a computer for most calculations Accordingly we have modified the format of the book to facilitate computer usage

Entropy and Free Energy in Structural Biology Hagai Meirovitch, 2020-08-14 Computer simulation has become the main engine of development in statistical mechanics In structural biology computer simulation constitutes the main theoretical tool for structure determination of proteins and for calculation of the free energy of binding which are important in drug design *Entropy and Free Energy in Structural Biology* leads the reader to the simulation technology in a systematic way The book which is structured as a course consists of four parts Part I is a short course on probability theory emphasizing 1 the distinction between the notions of experimental probability probability space and the experimental probability on a computer and 2 elaborating on the mathematical structure of product spaces These concepts are essential for solving probability problems and devising simulation methods in particular for calculating the entropy Part II starts with a short review of classical thermodynamics from which a non traditional derivation of statistical mechanics is devised Theoretical aspects of statistical mechanics are reviewed extensively Part III covers several topics in non equilibrium thermodynamics and statistical mechanics close to equilibrium such as Onsager relations the two Fick's laws and the Langevin and master equations The Monte Carlo and molecular dynamics procedures are discussed as well Part IV presents advanced simulation methods for polymers and protein systems including techniques for conformational search and for calculating the potential of mean force and the chemical potential Thermodynamic integration methods for calculating the absolute entropy and methodologies for calculating the absolute free energy of binding are evaluated Enhanced by a number of solved problems

and examples this volume will be a valuable resource to advanced undergraduate and graduate students in chemistry chemical engineering biochemistry biophysics pharmacology and computational biology

Constructing the Family Luke Taylor, 2022-11-01 In nineteenth century England legal conceptions of work and family changed in fundamental ways Notably significant legal moves came into play that changed the legal understanding of the family Constructing the Family examines the evolution of the legal discursive framework governing work and family relations Luke Taylor considers the intersecting intellectual and institutional forces that contributed to the dissolution of the household the establishment of separate spheres of work and family and the emergence of modern legal and social ideas concerning work and family He shows how specific legal institutional moves contributed to the creation of the family's categorical status in the social and legal order and a distinct and exceptional body of rules Family Law for its governance Shedding light on the historical processes that contributed to the emergence of English Family Law Constructing the Family shows how work and family became separate regulatory domains and in so doing reveals the contingent nature of the modern legal family

Surface and Interface Characterization by Electron Optical Methods Ugo Valdre, 2013-03-09 The importance of real space imaging and spatially resolved spectroscopy in many of the most significant problems of surface and interface behaviour is almost self evident To join the expertise of the traditional surface scientist with that of the electron microscopist has however been a slow and difficult process In the past few years

remarkable progress has been achieved including the development of new techniques of scanning transmission and reflection imaging as well as low energy microscopy all carried out in greatly improved vacuum conditions Most astonishing of all has been the advent of the scanning tunneling electron microscope providing atomic resolution in a manner readily compatible with most surface science diagnostic procedures The problem of beam damage though often serious is increasingly well understood so that we can assess the reliability and usefulness of the results which can now be obtained in catalysis studies and a wide range of surface science applications These new developments and many others in more established surface techniques are all described in this book based on lectures given at a NATO Advanced Study Institute held in Erice Sicily at Easter 1987 It is regretted that a few lectures on low energy electron diffraction and channeling effects could not be included Fifteen lecturers from seven different Countries and 67 students from 23 Countries and a wide variety of backgrounds attended the school

The interest rate risk of banks Max Teichert, 2018-02-28 This book produces three main results First the interest rate risk from on balance sheet term transformation of banks in Germany exceeds the euro area average and is bound to increase even further Within Germany savings banks and cooperative banks are particularly engaged Second supervisory interest rate shock scenarios are found to be increasingly detached both from the historic and the forecasted development of interest rates in Germany This increasingly limits the informative content of mere exposure measures such as the Basel interest rate coefficient when used as risk measures Third there is a reasonable theoretical rationale and there is strong empirical evidence for banks search for yield in interest rate risk i e a negative link between the term spread and the taking of interest rate risk by banks There is even a threshold of income below which banks search for yield in interest rate risk surfaces openly

International Commercial Disputes Jonathan Hill, Adeline Chong, 2014-11-24 This is the fourth edition of this highly regarded work on the law of international commercial litigation as practised in the English courts As such it is primarily concerned with how commercial disputes which have connections with more than one country are dealt with by the English courts Much of the law which provides the framework for the resolution of such disputes is derived from international instruments including recent Conventions and Regulations which have significantly re shaped the law in the European Union The scope and impact of these European instruments is fully explained

and assessed in this new edition The work is organised in four parts The first part considers the jurisdiction of the English courts and the recognition and enforcement in England of judgments granted by the courts of other countries This part of the work which involves analysis of both the Brussels I Regulation and the so called traditional rules includes chapters dealing with jurisdiction in personam and in rem anti suit injunctions and provisional measures The work s second part focuses on the rules which determine whether English law or the law of another country is applicable to a given situation The part includes a discussion of choice of law in contract and tort with particular attention being devoted to the recent Rome I and Rome II Regulations The third part of the work includes three new chapters on international aspects of insolvency in particular under the EC Insolvency Regulation and the final part focuses on an analysis of legal aspects of international commercial arbitration In particular this part examines the powers of the English courts to support or supervise an arbitration the effect of an arbitration agreement on the jurisdiction of the English courts the law which governs an arbitration agreement and the parties dispute and the recognition and enforcement of foreign arbitration awards This title is included in Bloomsbury Professional s International Arbitration online service *Nibble* ,1991
