BenRafael,Neri Laufer,Shlomo Mashiach,Joseph G. Schenker,2012-12-06 The World Congress of In Vitro Fertilization and Alternate Assisted Reproduction held in Jerusalem

Israel 27 April 1989 was the sixth in the sequence of these Congresses but was the first to emphasize the major importance and the place of assisted reproductive technologies in the treatment of infertility. The eternal City of Jerusalem witnessed the gathering of more than 1500 participants from all over the world who shared and exchanged knowledge and up to date experience in this ever evolving field. The high quality scientific contributions to the Congress culminated in the publication of this Proceedings. It embraces all important aspects in the field of in vitro fertilization and alternate assisted reproduction. Papers on controversies and diversities of methods to stimulate the ovaries, imaging techniques, basic research and state of the art papers on ovarian physiology, the role of GnRH and its analog, clinical aspects of IVF treatment and cryopreservation up to date techniques in assisted reproductive technologies that are quickly developing in conjunction with IVF were included. When should IVF be preferable to surgery? What are the expected up to date world results and what are the psychological, moral, ethical and religious implications? These are all the concerns of the treating team and are addressed here. Male factor infertility remains a frustrating problem but advances in the understanding of sperm egg interaction, sperm evaluation and preparation are reported. Micromanipulation emerges as a possible alternative to bring some relief to this problem but it also promises to be central in promoting the field of prenatal genetic analysis.

Genetic Testing in Reproductive Medicine Rajender Singh, 2024-02-29. This textbook illustrates the importance and significance of molecular genetic testing in reproductive disorders. The present book covers the genetic testing in various reproductive system anomalies including disorders of sexual development, male infertility, Y deletions, autosomal mutations, sperm DNA fragmentation, female infertility, PCOS and POF, mitochondrial DNA testing for oocyte quality, recurrent pregnancy loss, preterm birth, endometrial receptivity, prenatal genetic screening, reproductive carrier screening, preimplantation genetic screening, endometrial cancer, cervical cancer and other related reproductive health disorders. Microbiome testing and its contribution to genetic testing in reproductive medicine are also discussed. Genetic testing in some of these has already come into practice, genetic testing for others is established but not clinically practiced and genetic testing for others is yet in infancy as there is only limited data available. For the disorders where sufficient genetic data to undertake genetic testing is not available, we have tried to put together the evidence for proposing such tests in the near future. Apart from this, the book also covers ethical, moral and technical challenges in genetic testing in reproductive medicine. The book aims to set up a standard with regard to genetic testing in the reproductive medicine field, encourage further data generation and provide food for thought in the areas of lacunae. The book serves graduate students, researchers, clinicians, professors and patients in the field of reproductive medicine.
