Alchemists tried to find the ancient recipe for making gold and achieving immortality. None succeeded, yet modern science owes much to their techniques

Written by Erich B. Anderson

**I**n 1666, renowned English mathematician, astronomer and natural philosopher, Sir Isaac Newton, observed light entering a prism, and from this experience he made a brilliant discovery about light and colour: that white light is made up of a spectrum of several colours. He was fascinated with light, and believed that it had a close relationship to the concept that the early modern scientist knew as 'the vegetable spirit', which was an idea that Newton coined.

Newton was constantly awed by the beauty and complexity of nature. Over time, he concluded that the massive variety of life and processes that occur in nature, such as growth and decay, must be driven by some driving force making it all happen. He believed that the 'vegetable spirit' was that force, and he thought it might be linked with the power of light.

To those only familiar with Newton's discoveries in mathematics and physics, the idea of the 'vegetable spirit' might seem strange, and even pseudo-scientific. On the other hand, this idea and several others

of the famous scientist were closely associated with a subject that he is not very often known for studying, and yet spent a great amount of his time devoted to: alchemy. In his lifetime, Newton wrote around one million words on alchemy, which shows how committed he was to the practice. Through his research into alchemy, Newton hoped to uncover the secret of the 'vegetable spirit', or the spirit of life.

Even to Newton in the 17th century, alchemy was an esoteric art with hundreds of texts available for him to study. But Newton was not the first person to turn to alchemy in order to find what he was looking for, and was in fact one of the last in a long line of alchemists who sought to use the art for the purpose of discovering the universe's remarkable secrets.

The primary mission of ancient and Medieval alchemists was finding the way to create gold and the elixir of life. Unfortunately for them and Newton, alchemy has been shrouded in secrets and mystery throughout its existence, particularly during the Medieval period. Alchemists have repeatedly defended this secrecy, stating that its purpose is to keep the spectacular knowledge hidden from unworthy individuals who might use it for nefarious gains though today we might suspect that the true reason for the secrecy is

that, from the very beginning, the goals of the alchemists were impossible to achieve.

The origins of alchemy can be traced back 2,000 years before Newton to the ancient Egyptians and Greeks. In fact, the word 'alchemy' may be derived from *Khem*, which was an Ancient Greek term for Egypt. Even though alchemical tradition often states that the founding father of the practice was Hermes Trismegistus, it is very difficult to tie the root of alchemy to one person. On the other hand, it is much more likely that the first proto-alchemists were Egyptian metalworkers, who would have worked with several different types of metal. It was gold that had the most value, therefore many focused their attention on this precious metal. Dyes and medicine-makers were also linked to early alchemy.

Over time, the experience of working with gold, silver and other metals led the most talented craftsmen to develop impressive alloys. Eventually, many different types of 'gold' entered the market, with major economic consequences as the manipulated metals and alloys were not in fact gold, but convincing fakes. By the time the Romans controlled Egypt, counterfeit gold had become such a problem for the imperial treasury that the Roman Emperor Diocletian (reigning between 284-305 CE) ordered the destruction of every single text
