Selected Topics In Wave Propagation:

Selected Topics in Wave Propagation Sandor Csibi, 1976 *Selected Topics in Nonlinear Wave Mechanics* C.I.

Christov, Arde Guran, 2012-12-06 This book gives an overview of the current state of nonlinear wave mechanics with emphasis on strong discontinuities shock waves and localized self preserving shapes solitons in both elastic and fluid media The exposition is intentionally at a detailed mathematical and physical level our expectation being that the reader will enjoy coming to grips in a concrete manner with advances in this fascinating subject Historically modern research in nonlinear wave mechanics began with the famous 1858 piston problem paper of Riemann on shock waves and continued into the early part of the last century with the work of Hadamard Rankine and Hugoniot After WWII research into nonlinear propagation of dispersive waves rapidly accelerated with the advent of computers Works of particular importance in the immediate post war years include those of von Neumann Fermi and Lax Later additional contributions were made by Lighthill Glimm Strauss Wendroff and Bishop Dispersion alone leads to shock fronts of the propagating waves That the nonlinearity can compensate for the dispersion leading to propagation with a stable wave having constant velocity and shape solitons came as a surprise A solitary wave was first discussed by J Scott Russell in 1845 in Report of British Associations for the Advancement of Science He had while horseback riding observed a solitary wave travelling along a water channel and followed its unbroken progress for over a mile

Selected Topics on Optical Fiber Technologies and Applications Fei Xu, Chengbo Mou, 2018-02-14

This book is a collection of contributions by selected active researchers in the optical fiber fields highlighting the design fabrication and application of optical fibers and fiber systems and covering various topics such as microstructured optical fibers polymer fibers nonlinear effects optical tweezers and gyroscopic systems The goal of the book is to provide an updated overview of the current research trends in the optical fiber fields serving as a general reference for the recent development in optical fiber technologies though inevitably many topics are not covered

Selected Topics in Vibrational Mechanics

, 2004 Vibrational mechanics is a new intensively developing section of nonlinear dynamics and of the theory of nonlinear oscillations It presents a general approach to the study of the effects of vibration on nonlinear systems This approach is characterized by simplicity of application and by physical clearness In recent years a number of new essential results have been obtained both on the development of the mathematical apparatus of vibrational mechanics and on the solution of certain applied problems This book reflects those results through the ingenious presentation of the authors well known scientists from Germany Denmark and Russia For the convenience of readers the main content is preceded by a brief description of the main theses of vibrational mechanics

Selected Topics in Environmental Biology Balraj Bhatia, G. S.

Chhina, Baldev Singh, 2013-10-22 *Selected Topics in Environmental Biology* covers the proceedings of the 26th International Congress of Physiological Sciences on Environmental Biology held in New Delhi India on October 20-26 1974 The symposium is arranged in the subjects of high altitude and under water physiology and the physiological effects of cold heat and

accelerations This book is organized into 13 sections encompassing 74 chapters The opening part deals with the principles and mechanisms of thermoregulation with emphasis on the role of neurotransmitters in temperature regulation The succeeding parts examine metabolic aspects and adaptive mechanisms to cold and heat stress These parts also survey the thyroid function resistance acclimatization and nerve impulse effects of these conditions Other parts discuss the hypothalamic control and susceptibility to hypothermia and thermal injury the capacity of short term and prolonged exposure to hypoxia the pathogenesis of pulmonary edema and the constitution and body functions in different ethnic groups These topics are followed by reviews on the body adaptive changes under hypogravic state biochemical changes induced by environmental pollution and physiological behavior under noise hyperbaric and emotional stress The last part describes the effect of environmental stress on diurnal variations in body functions This book will prove useful to environmental biologists physiologists biochemists and researchers

Advances in Mechanics and Mathematics David Yang Gao, Raymond W. Ogden, 2013-12-01 As any human activity needs goals mathematical research needs problems David Hilbert Mechanics is the paradise of mathematical sciences Leonardo da Vinci Mechanics and mathematics have been complementary partners since Newton's time and the history of science shows much evidence of the beneficial influence of these disciplines on each other Driven by increasingly elaborate modern technological applications the symbiotic relationship between mathematics and mechanics is continually growing However the increasingly large number of specialist journals has generated a duality gap between the two partners and this gap is growing wider Advances in Mechanics and Mathematics AMMA is intended to bridge the gap by providing multi disciplinary publications which fall into the two following complementary categories 1 An annual book dedicated to the latest developments in mechanics and mathematics 2 Monographs advanced textbooks handbooks edited volumes and selected conference proceedings The AMMA annual book publishes invited and contributed comprehensive reviews research and survey articles within the broad area of modern mechanics and applied mathematics Mechanics is understood here in the most general sense of the word and is taken to embrace relevant physical and biological phenomena involving electromagnetic thermal and quantum effects and biomechanics as well as general dynamical systems Especially encouraged are articles on mathematical and computational models and methods based on mechanics and their interactions with other fields All contributions will be reviewed so as to guarantee the highest possible scientific standards

University Curricula in Oceanography, 1967 **Poromechanics II** J.L. Auriault, C. Geindreau, P. Royer, J.F. Bloch, 2020-12-17 These proceedings deal with the fundamentals and applications of poromechanics to geomechanics material sciences geophysics acoustics and biomechanics They discuss the state of the art in such topics as constitutive modelling and upscaling methods *Nonlinear Hyperbolic Problems: Theoretical, Applied, and Computational Aspects* Andrea Donato, Francesco Oliveri, 2013-03-08 Selected Papers on Harmonic Analysis, Groups, and Invariants Katsumi Nomizu, 1997 The five papers originally appeared in Japanese in the journal Sugaku and would ordinarily appear in the

Society's translation of that journal but are published separately here to expedite their dissemination. They explore such aspects as representation theory, differential geometry, invariant theory, and complex analysis. No index. Member prices are 47 for institutions and 35 for individual. Handbook of Applied Mathematics Carl Pearson, 2012-12-06. Most of the topics in applied mathematics dealt with in this handbook can be grouped rather loosely under the term analysis. They involve results and techniques which experience has shown to be of utility in a very broad variety of applications. Although care has been taken to collect certain basic results in convenient form, it is not the purpose of this handbook to duplicate the excellent collections of tables and formulas available in the National Bureau of Standards Handbook of Mathematical Functions, AMS Series 55, U.S. Government Printing Office, and in the references given therein. Rather, the emphasis in the present handbook is on technique, and we are indeed fortunate that a number of eminent applied mathematicians have been willing to share with us their interpretations and experiences. To avoid the necessity of frequent and disruptive cross referencing, it is expected that the reader will make full use of the index. Moreover, each chapter has been made as self-sufficient as is feasible. This procedure has resulted in occasional duplication, but as compensation for this, the reader may appreciate the availability of different points of view concerning certain topics of current interest. As editor, I would like to express my appreciation to the contributing authors, to the reviewers, to the editorial staff of the publisher, and to the many secretaries and typists who have worked on the manuscript without the partnership of all of these people, this handbook would not have been possible.

Selected Papers on Classical Analysis 〓〓〓, 2001. Six papers that originally appeared in the journal *Sugaku* in Japanese explore the general area of mathematical analysis as it pertains to free probability based on operator algebras. They cover the free products of operator algebras and free probability theory, the dynamics of Kleinian groups, and the Hausdorff dimension of limit sets, topological methods in the stability analysis of travelling waves, an extension of almost periodic functions, and analyticity on flows. Painlevé equations in the past century and the Navier-Stokes equation in various function spaces. They are not indexed. c. Book News Inc.

Selected Papers on Analysis and Differential Equations 〓〓〓, 2003. This volume contains translations of papers that originally appeared in the Japanese journal *Sugaku*. Ordinarily, the papers would appear in the AMS translation of that journal, but to expedite publication, the Society has chosen to publish them as a volume of selected papers. The papers range over a variety of topics, including nonlinear partial differential equations, C-algebras, and Schrödinger operators. The volume is suitable for graduate students and research mathematicians interested in analysis and differential equations.
