Shields, 2019-01-10

Histology is the science of tissues and as such histology studies cells and tissues of organs using a variety of techniques Histological techniques are used in different disciplines research teaching and clinical applications This book explores the research currently being carried out at the molecular subcellular and cellular levels both in normal and pathological processes from genetic mechanisms to intra and intercellular signaling This book includes cutting edge research reviews and descriptions of technological advances to modify bodily cells and tissues Targeted at students and researchers in biological medical and related disciplines this book will provide an overview of the work being done in this field and will highlight gaps and areas that would benefit from further exploration The book contains eight chapters in four sections and presents reviews in different areas of histology written by experts in their respective fields Basic histology cell biology histopathology and histological techniques are featured prominently as a recurring theme throughout the chapters This book will be a most valuable resource for histologists cell biologists pathologists and other scientists alike and contribute to the training of current and future biomedical scientists Biological Characterization of Bone Tumors Albert Roessner, 2012-12-06

During the past few years a considerable number of monographs on bone tumors have been published They are mainly restricted to bone tumors as clinical pathological entities since their diagnosis more than that of other tumors requires the interdisciplinary cooperation between orthopedic specialist radiologist and pathologist However investigations concerning the histogenesis of bone tumors are rather limited although they might be helpful in explaining the unique morphological heterogeneity of tumors of the skeletal system Furthermore the histogenetic approach in the study of bone tumors may facilitate the interpretation of the advanced cytobiological methods available for improving classification and diagnosis Therefore this volume presents recent pathological advances in the biological characterization of bone tumors A major chapter deals with the differential diagnosis of Ewing's sarcoma as regards its demarcation from the so called neuroectodermal tumor of bone The analysis of the ground substances in bone forming tumors may be helpful for their classification Therefore the volume includes a chapter on the biochemical and histochemical analysis of different

osteosarcoma types Recently it has become clear that in addition to different collagen types which are not specific for bone tissue several bone specific proteins occur one of which is osteonectin Its distribution is obviously important for the classification and diagnosis of osteoblastic tumors Proliferative behavior is of major importance for the diagnosis of malignant tumors

Medical Parasitology K. Shyamasundari, K Hanumantha Rao ,2019-06-04 Parasites and parasitic morbidity and or disease seem to be a birth right of the tropics This is a sequel to greater biodiversity fragmented in relation to biogeography and climatic shifts congenial to nocturnal enemies of humans like mosquitoes In fact in some cases parasite strategies have thwarted attempts of the scientific community to eradicate them The best example running its course now is any kind of flu Flu is no simple single strain strategy At the base of parasitic diseases man has recognized a dichotomy namely animal diseases and diseases of man but there may be links between humans and animal zoonoses We owe a great deal to the British Empire in the expansion of knowledge of tropical diseases especially of peninsular India with more or less warm climate plenty of room for growth of intermediate host like *Anopheles* malaria *Culex* filaria and *Aedes* dengue The School of Tropical Medicine and Hygiene at London is especially interested in this direction We have at the present time many institutions in India dealing with public health problems Schools of Tropical Medicine Calcutta several laboratories of preventive medicine and more recently immunology laboratories Likewise there has been a growth of institutions dealing with veterinary medicine and animal health We are just beginning to understand what is known as zoonoses That is parasites which normally infect and develop in animals can under certain circumstances infect humans and thrive with as much ease India can now boast of being free of smallpox and plague but bad hygienic conditions are not allowing the control of malaria dengue filaria typhoid leprosy etc Dilution of efforts because of population explosion is the cause A multi prolonged attack

- 1 Treatment
- 2 Eradication of intermediate hosts like mosquitoes
- 3 Preventive measures Prophylaxis specific to each parasitic infection becomes a must education is necessary

The aim of the present book is to provide a brief but reasonably comprehensive information to the medical student as well as students of medical laboratory techniques To be a comprehensive parasitologist of some worth and meaning the present book has been designed Equal emphasis is given to microbes and the protozoan and metazoan parasites Two pertinent remarks can be quoted Stoll 1947 had said that at any army center the medical officer never heard of bancroftian filariasis the disease while soldiers saw it with dismay elephantiasis the symptom Philip 1987 had said that there is always something new under the parasitological sun
