Manual Bruce W. Char,1991 Books in Print ,1991 *Algebraic Approach to Simple Quantum Systems* Barry G. Adams,2012-12-06 This book provides an introduction to the use of algebraic methods and symbolic computation for simple quantum systems with applications to large order perturbation theory It is the first book to integrate Lie algebras algebraic perturbation theory and symbolic computation in a form suitable for students and researchers in theoretical and computational chemistry and is conveniently divided into two parts The first part Chapters 1 to 6 provides a pedagogical introduction to the important Lie algebras $so(3)$, $so(2,1)$, $so(4)$ and $so(4,2)$ needed for the study of simple quantum systems such as the D dimensional hydrogen atom and harmonic oscillator This material is suitable for advanced undergraduate and beginning graduate students Of particular importance is the use of $so(2,1)$ in Chapter 4 as a spectrum generating algebra for several important systems such as the non relativistic hydrogen atom and the relativistic Klein Gordon and Dirac equations This approach provides an interesting and important alternative to the usual textbook approach using series solutions of differential equations *Bayesian Robustness* James O. Berger,1996 **Computational Discovery of Scientific Knowledge** Saso Dzeroski,Ljupco Todorovski,2007-08-07 This survey provides an introduction to computational approaches to the discovery of communicable scientific knowledge and details recent advances It is partly inspired by the contributions of the International Symposium on Computational Discovery of Communicable Knowledge held in Stanford CA USA in March 2001 a number of additional invited contributions provide coverage of recent research in computational discovery
